Dominion Bureau of Statistics
Ottawa

SURVEY OF HOUSEHOLD FACILITIES AND EQUIPMENT

I INTRODUCTION

In September, 1953, the Dominion Bureau of Statistics carried out a special survey of housing characteristics, and household equipment in private homes. The survey was made in conjunction with the monthly labour force survey. Over 30,000 households, chosen by area sampling methods, in about 110 areas were visited.

Estimates based on data obtained from the survey are presented in the following tables of this report:

Tables 1 - 7:	Housing characteristics
Table 8:	Electrification of dwellings
Tables 9 - 16:	Heating facilities
Tables 17, 18 :	Plumbing facilities
Tables 19 - 23:	Household equipment
Tables 24 - 26:	Telephones, radios and television receivers
Tables 27, 28 :	Automobiles

II SAMPLE DESIGN

The sampling system used in the monthly labour force surveys covers all but a small proportion of the Canadian civilian non-institutional population 14 years of age and over. Persons in the armed forces or living in institutions are excluded by design. On grounds of inaccessibility and the high cost of enumeration, persons living on Indian reserves and in certain remote areas are also omitted.

As a preliminary step in the designation of the sample, the whole country was divided into "primary sampling units". These are sample areas which consist of from one to ten adjoining townships or municipalities selected in such a way that the area included in a primary sampling unit is as heterogeneous as possible. Next, the primary sampling units in each province were classed into groups or strata. The aim of stratification was to include in one stratum sample areas whose industrial, agricultural or population characteristics were most similar. Then, one primary sampling unit was selected from each stratum in such a way that the probability of selection of any unit was proportionate to its population. A primary sampling unit thus represents all other areas in the stratum from which it is selected. In addition, each city whose population was 30,000 or more, was automatically included in the sample. Counting the cities, there are approximately 110 primary sampling units.

After a primary sampling unit had been selected from each stratum the sample area was subdivided into a number of smaller units. In cities, these smaller areas are "blocks" which consist of one or more city blocks. In rural areas, the primary sampling units were divided into "segments". A

certain proportion of the blocks and segments were selected by random methods for inclusion in the sample. For most cities, listings of all the households in selected blocks were available. In rural areas, it was necessary to compile special lists of households for sampling purposes. From the lists of households or farms in blocks or segments, a specific proportion were selected for actual enumeration. The proportion of households to be sampled in different areas was adjusted to yield approximately one per cent of the households in the area covered by the sample.

The method of sampling used in the labour force survey is sometimes referred to as "area sampling". One essential feature of it is that a specified ratio of the households in a given area is enumerated. This is to be distinguished from sampling methods which depend on the availability of accurate and up-to-date information on the number of persons in an area or in a class. Since the area sampling method specifies the selection of a given proportion of the households in the area, the sample will provide current estimates of household characteristics.

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. All occupied dwellings are represented except hotels, large lodging houses, institutions, clubs, camps, and other such collective types of living quarters.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined, for census purposes, as "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarter located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following

are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are to be included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

MONTHLY RENT: Figures on monthly rent are based on the rent paid for the month of September, 1953.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete census is less than the sampling variability indicated.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is proportionately larger than fifty per cent. In the following tables, estimates which are less than 4,000 are replaced by an asterisk.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statements by either enumerator or respondent.

The non-sampling error is as prevalent in a census as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

I INTRODUCTION

In September, 1954, the Dominion Bureau of Statistics carried out a special survey of housing characteristics, and household equipment in private homes. The survey was made in conjunction with the monthly labour force survey. Over 30,000 households, chosen by area sampling methods, in 114 areas were visited. A similar survey was carried out in September, 1953, the results of which were contained in the report "Household Facilities and Equipment, September, 1953".

Estimates based on data obtained from the survey are presented in the following tables of this report:

Tables 1 - 7:	Housing characteristics
Table 8:	Electrification of dwellings
Tables 9 - 16:	Heating facilities
Tables 17 - 19:	Plumbing facilities
Tables 20 - 24:	Household equipment
Tables 25 - 27:	Telephones, radios and television receivers
Tables 28, 29:	Automobiles

II DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. All occupied dwellings are represented except hotels, large lodging houses, institutions, clubs, camps, and other such collective types of living quarters.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

MONTHLY RENT: Figures on monthly rent are based on the rent paid for the month of September, 1954.

III RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete census is less than the sampling variability indicated.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is proportionately larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force continuing sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the above table.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1954 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent here used, but it is considered that for most analyses of household facilities the accuracy here provided is adequate. It is suggested that in using this series of annual bulletins to establish year-to-year changes in household facilities the comparison be confined to percentages of households having given facilities.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statements by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

The Right Honourable C. D. Howe, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS
Special Surveys Division

HOUSEHOLD FACILITIES AND EQUIPMENT

I INTRODUCTION

In September, 1955, the Dominion Bureau of Statistics carried out a special survey of housing characteristics, and household equipment in private homes. The survey was made in conjunction with the monthly labour force survey. Over 30,000 households, chosen by area sampling methods, in 114 areas were visited. A similar survey was carried out in September, 1953 and 1954, the results of which were contained in the report "Household Facilities and Equipment", for September 1953 and September 1954.

Estimates based on data obtained from the survey are presented in the following tables of this report:

Tables 1 - 7: Housing characteristics

Table 8: Electrification of dwellings

Tables 9 - 16: Heating facilities

Tables 17 - 19: Plumbing facilities

Tables 20 - 24: Household equipment

Tables 25 - 27: Telephones, radios and television receivers

Tables 28 - 29: Automobiles

11 COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households of Indians on reserves; such collective type households as those living in hotels, large lodging houses, institutions, clubs and camps.

In the 1953 survey, certain remote and relatively inaccessible areas of Canada were not included in the estimates. Between the 1953 and 1954 surveys, the sample design was altered so that totals would include estimates for these areas in Ontario, although, for cost reasons, they were given no chance of selection for enumeration. Before the 1955 survey, the sample was again altered so that estimates were included on the same basis for the remaining areas in Quebec, the Prairie Provinces, and British Columbia. The households in the remote areas not represented in the 1953 survey amounted to about 1.0% of the Canada total, and in the 1954 survey, amounted to about 0.4%.

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

MONTHLY RENT: Figures on monthly rent are based on the rent paid for the month of September, 1955.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete census is less than the sampling variability indicated.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is proportionately larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force continuing sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the above table.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1955 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent here used, but it is considered that for most analyses of household facilities the accuracy here provided is adequate. It is suggested that in using this series of annual bulletins to establish year-to-year changes in household facilities the comparison be confined to percentages of households having given facilities.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statements by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

CANADA

HOUSEHOLD FACILITIES AND EQUIPMENT

SEPTEMBER, 1956

Published by Authority of
The Right Honourable C. D. Howe, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS
Special Surveys Division

HOUSEHOLD FACILITIES AND EQUIPMENT

I INTRODUCTION

The estimates of total households for Canada and the provinces contained in this report are based on estimates of population derived from the 1951 Census adjusted for births and deaths, immigration and emigration since then. These may differ from the counts obtained in the 1956 Census, the results of which are still being tabulated. See also below, the sections on "Coverage" and "Reliability of Estimates".

In September, 1956, the Dominion Bureau of Statistics carried out a special survey of housing characteristics, and household equipment in private homes. The survey was made in conjunction with the monthly labour force survey. Over 30,000 households, chosen by area sampling methods, in 116 areas were visited. The survey is a continuation of the series begun in September, 1953, and carried out annually. Results are contained in the annual reports "Household Facilities and Equipment", for September, 1953, 1954 and 1955.

Estimates based on data obtained from the survey are presented in the following tables of this report:

Tables 1 - 7:	Housing characteristics
Table 8:	Electrification of dwellings
Tables 9 - 16:	Heating facilities
Tables 17 - 19:	Plumbing facilities
Tables 20 - 24:	Household equipment
Tables 25 - 27:	Telephones, radios and television receivers
Tables 28 - 29:	Automobiles

II COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households of Indians on reserves; such collective type households as those living in hotels, large lodging houses, institutions, clubs and camps.

In the 1953 survey, certain remote and relatively inaccessible areas of Canada were not included in the estimates. Between the 1953 and 1954 surveys, the sample design was altered so that totals would include estimates for these areas in Ontario, although, for cost reasons, they were given no chance of selection for enumeration. Before the 1955 survey, the sample was again altered so that estimates were included on the same basis for the remaining areas in Quebec, the Prairie Provinces, and British Columbia. The households in the remote areas not represented in the 1953 survey amounted to about 1.0% of the Canada total, and in the 1954 survey, amounted to about 0.4%.

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

MONTHLY RENT: Figures on monthly rent are based on the rent paid for the month of September, 1956.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figures which would have been obtained from a complete census is less than the sampling variability indicated.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is proportionately larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the above table.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1956 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent here used, but it is considered that for most analyses of household facilities the accuracy here provided is adequate. It is suggested that in using this series of annual bulletins to establish year-to-year changes in household facilities the comparison be confined to percentages of households having given facilities.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statements by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

CANADA

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY, 1957

Published by Authority of

The Honourable Gordon Churchill, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS

Special Surveys Division

HOUSEHOLD FACILITIES AND EQUIPMENT

I INTRODUCTION

The estimates of total households for Canada and the provinces contained in this report are based on estimates of population derived from the 1951 Census adjusted for births and deaths, immigration and emigration since then. The estimates have not yet been adjusted to the 1956 Census basis but are comparable with those contained in previous bulletins of this series. See also below, the sections on "Coverage" and "Reliability of Estimates".

In May, 1957, the Dominion Bureau of Statistics carried out a special survey of housing characteristics, and household equipment in private homes. The survey was made in conjunction with the monthly labour force survey. Over 35,000 households, chosen by area sampling methods, in 116 areas were visited. The survey is a continuation of the series begun in September, 1953, and carried out annually. Results are contained in the annual reports "Household Facilities and Equipment", for September, 1953, 1954, 1955 and 1956.

Estimates based on data obtained from the survey are presented in the following tables of this report:

Tables 1 - 7:	Housing characteristics
Table 8:	Electrification of dwellings
Tables 9 - 16:	Heating facilities
Tables 17 - 19:	Plumbing facilities
Tables 20 - 24:	Household equipment
Tables 25 - 27:	Telephones, radios and television receivers
Tables 28 - 29:	Automobiles

II COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households of Indians on reserves; such collective type households as those living in hotels, large lodging houses, institutions, clubs and camps.

In the 1953 survey, certain remote and relatively inaccessible areas of Canada were not included in the estimates. Between the 1953 and 1954 surveys, the sample design was altered so that totals would include estimates for these areas in Ontario, although, for cost reasons, they were given no chance of selection for enumeration. Before the 1955 survey, the sample was again altered so that estimates were included on the same basis for the remaining areas in Quebec, the Prairie Provinces, and British Columbia. The households in the remote areas not represented in the 1953 survey amounted to about 1.0% of the Canada total, and in the 1954 survey, amounted to about 0.4%.

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

MONTHLY RENT: Figures on monthly rent are based on the rent paid for the month of May, 1957.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figures which would have been obtained from a complete census is less than the sampling variability indicated.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is proportionately larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the above table.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1957 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent here used, but it is considered that for most analyses of household facilities the accuracy here provided is adequate. It is suggested that in using this series of annual bulletins to establish year-to-year changes in household facilities the comparison be confined to percentages of households having given facilities.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

I INTRODUCTION

The results of the 1958 Survey of Household Facilities and Equipment are weighted up to estimates of total households based on population estimates projected from the 1956 Census. The estimates of total households used in the published reports of the 1957 and previous Surveys were based on the 1951 Census. However, for the sake of a higher degree of comparability with 1958, the 1957 estimates have been adjusted to the 1956 base and are contained in Appendix "A" of this report.

In May 1958, the Dominion Bureau of Statistics carried out another in the annual series of surveys of housing characteristics and household equipment in private homes. The survey was made in conjunction with the monthly labour force survey. Over 35,000 households, chosen by area sampling methods, in about 120 areas were visited.

Estimates based on data obtained from the 1958 survey are presented in the following tables of this report:

Tables 1 - 7:	Housing characteristics
Table 8:	Electrification of dwellings
Tables 9 - 16:	Heating facilities
Tables 17 - 19:	Plumbing facilities
Tables 20 - 24:	Household equipment
Tables 25 - 27:	Telephones, radios and television receivers
Tables 28 - 29:	Automobiles

Corresponding tables for 1957 are contained in Appendix "A". The 1957 table numbers are identical with the above but are prefixed by the letter "A".

II COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective type households such as those living in hotels, large lodging houses, clubs, logging and construction camp; certain private households living in trailers, in summer cottages, on boats, etc.

The coverage of this survey is somewhat less than that of the series on families, the latest published report of which is "Estimates of Families in Canada 1957". The latter includes families living in households on Indian reserves and in collective-type households except institutions and military camps, as well as all private households in the ten provinces. Estimates of total households by provinces covered by the two series are given in the following table.

Estimates of households by province, 1958 and 1957

	Covered in the "family" series		Covered in survey of household facilities and equipment	
	1958	1957	1958	1957

Alberta	321	313	313	306
British Columbia	459	431	446	419

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

MONTHLY RENT: Figures on monthly rent are based on the rent paid for the month of May, 1958.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figures which would have been obtained from a complete census is less than the sampling variability indicated.

These estimates are averages since sampling variability differs from characteristic to characteristic and from year to year.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the above table.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1958 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent here used, but it is considered that for most analyses of household facilities the accuracy here provided is adequate. It is suggested that in using this series of annual bulletins to establish year-to-year changes in household facilities the comparison be confined to percentages of households having given facilities.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

I INTRODUCTION

In May 1959, the Dominion Bureau of Statistics carried out another in the annual series of surveys of household characteristics and household equipment in private homes. The survey was made in conjunction with the monthly labour force survey. Over 35,000 households, chosen by area sampling methods, in about 140 areas were visited.

Estimates based on data obtained from the 1959 survey are presented in the following tables of this report:

Tables 1 - 7:	Housing characteristics
Table 8:	Electrification of dwellings
Tables 9 - 16:	Heating facilities
Tables 17 - 19:	Plumbing facilities
Tables 20 - 24:	Household equipment
Tables 25 - 27:	Telephones, radios and television receivers
Tables 28 - 29:	Automobiles

Since the inception of the present series in 1953, a report containing the survey results has been issued each year. The results of the surveys are weighted up to estimates of total households based on population projections from the latest Census. The estimates of total households for the 1958 and 1959 surveys were based on the 1956 Census and are not strictly comparable with those for the 1953 - 1956 surveys which were based on the 1951 Census. The originally published estimates of total households for 1957 were based on the 1951 Census; however, to provide comparability with the 1958 estimates, they were revised to the 1956 Census base and published as an appendix in the 1958 report.

II COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

The coverage of this survey is somewhat less than that of the series on families, the latest published report of which is "Estimates of Families in Canada 1958". The latter includes families living in households on Indian reserves and in collective-type households except institutions and military camps, as well as all private households in the ten provinces. Estimates of total households by provinces covered by the two series are given in the following table.

Estimates of households by province, 1959 and 1958

(in thousands)

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

MONTHLY RENT: Figures on monthly rent are based on the rent paid for the month of May, 1959.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census has been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figures which would have been obtained from a complete census is less than the sampling variability indicated.

These estimates are averages since sampling variability differs from characteristic to characteristic and from year to year.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the preceding table.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1959 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent here used, but it is considered that for most analyses of household facilities the accuracy here provided is adequate. In using this series of annual bulletins to establish year-to-year changes in household facilities, the effect of sampling variability will be reduced to some extent if percentages of households having given facilities are compared rather than estimates of actual numbers.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1960

I INTRODUCTION

Since 1953, the Dominion Bureau of Statistics has carried out an annual survey of household characteristics and household equipment in private homes. This report presents the results of the latest survey, carried out in May 1960. The survey was made in conjunction with the monthly labour force survey. Over 35,000 households, chosen by area sampling methods in about 160 areas were visited.

A number of changes in the content of the questionnaire were made for the 1960 survey. The question on rent was omitted; data on this subject are collected for the Consumer Price Index and distributions of rent paid will be contained in a report, "Residential Rents in Major Cities in Canada", to be released within the next few months. Household electrification, which is near saturation, was dropped - probably for several years. Supplementary heating, declining in importance and becoming more difficult to measure, has also been omitted from the survey. The additions this year included number of bedrooms, garage facilities, fuel used in heating hot-water supply, clothes dryers, electric floor polishers, lawn mowers and outboard motors. For the first time, the survey makes distinction between piped and bottled gas and between automatic and other electric washing machines. Data on multiple possession by households of television sets and telephones also are contained in this report.

A summarization by broad groupings of the characteristics covered in the tables of this report follows:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 23:	Household appliances
Tables 24 - 26:	Telephones, radios and televisions
Table 27:	Lawn mowers
Table 28:	Outboard motors
Tables 29 - 30:	Automobiles and garage facilities.

The results of the surveys are weighted up to estimates of total households based on population projections from the latest Census. The estimates of total households for the 1958, 1959 and 1960 surveys were based on the 1956 Census and are not strictly comparable with those for the 1953 - 1956 surveys which were based on the 1951 Census. The originally published estimates of total households for 1957 were based on the 1951 Census; however, to provide comparability with the 1958 estimates, they were revised to the 1956 Census base and published as an appendix in the 1958 report.

II COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

The coverage of this survey is somewhat less than that of the series on families, the latest published report of which is "Estimates of Families in Canada 1959". The latter includes families living in households on Indian reserves and in collective-type households except institutions and military camps, as well as all private households in the ten provinces. Estimates of total households by provinces covered by the two series are given in the following table.

Estimates of households by province, 1960 and 1959

(in thousands)

Province	Covered in the "family" series		Covered in survey of household facilities and equipment	
	1960	1959	1960	1959

Saskatchewan	249	248	243	242
Alberta	349	340	341	331
British Columbia	480	473	466	460

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half or a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figures which would have been obtained from a complete census is less than the sampling variability indicated.

These estimates are averages since sampling variability differs from characteristic to characteristic and from year to year.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the preceding table.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1960 estimates of the numbers

of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent used, but it is considered that for most analyses of household facilities the accuracy provided is adequate, although discontinuities such as mentioned in footnote (2) to table 18 do occur. In using this series of annual bulletins to establish year-to-year changes in household facilities, the effect of sampling variability will be reduced to some extent if percentages of households having given facilities are compared rather than estimates of actual numbers.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

B.C.	466	421	*	*	41	59	407

(1) See Section II, "Coverage".

(2) As a consequence of certain improvements in the sample on which the survey is based, the 1960 estimates of households for Canada and Ontario using gas for cooking fuel are not closely comparable with the 1959 estimates. An increase over 1959 rather than the indicated decrease probably occurred in the number of Canadian households cooking with gas; on the other hand, it is likely that to about the same extent, the indicated increase in households cooking with electricity is too high. In lesser degree, the indicated increase for Canada and Ontario in households heated by gas is low and in households heated by oil is high.

(3) Includes hot plates and sawdust burners.

* Less than 4,000. - See Section IV, "Reliability of Estimates".

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1961

I INTRODUCTION

The estimates of total households for Canada and the provinces contained in this report are based on estimates of population derived from the 1956 Census adjusted for births and deaths, immigration and emigration since then. These may differ from the counts obtained in the 1961 Census, the results of which are still being tabulated. See also the last paragraph of this section and the sections on "Coverage" and "Reliability of Estimates".

Since 1953, the Dominion Bureau of Statistics has carried out an annual survey of household characteristics and household equipment in private homes. This report presents the results of the latest survey, carried out in May 1961. The survey was made in conjunction with the monthly labour force survey. Over 35,000 households, chosen by area sampling methods in about 170 areas were visited.

There were several changes in the content of the survey questionnaire from last year. Questions on automatic dishwashers, F.M. radio receivers, and phonographs and record players were included for the first time in the survey this year. Electric floor polishers, lawn mowers and outboard motors, which were covered in 1960, were not included on the 1961 questionnaire.

A summarization by broad groupings of the characteristics covered in the tables of this report follows:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 24:	Household appliances
Tables 25 - 28:	Telephones, radios and televisions
Table 29:	Phonographs and record players
Tables 30 - 31:	Automobiles and garage facilities.

The estimates of total households for the 1958, 1959, 1960 and 1961 surveys were based on the 1956 Census and are not strictly comparable with those for the 1953-1956 surveys which were based on the 1951 Census. The originally published estimates of total households for 1957 were based on the 1951 Census; however, to provide comparability with the 1958 estimates, they were revised to the 1956 Census base and published as an appendix in the 1958 report.

II COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc. 1961 Census reports to be issued starting about mid-1962 will contain counts of total dwellings as well as data on housing characteristics and household equipment. In addition to provincial data, the Census will provide statistics for more detailed geographical areas, such as counties and urban centres.

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half or a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;

- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for superintendents in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figures which would have been obtained from a complete census is less than the sampling variability indicated.

These estimates are averages since sampling variability differs from characteristic to characteristic and from year to year.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the preceding table.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1961 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent used, but it is considered that for most analyses of household facilities the accuracy provided is adequate. In using this series of annual bulletins to establish year-to-year changes in household facilities, the effect of sampling variability will be reduced to some extent if percentages of households having given facilities are compared rather than estimates of actual numbers.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

STATISTICAL TABLES

Table 1. - Size of household, by rooms per dwelling, Canada, May, 1961

(estimates in thousands)

Number of rooms per dwelling	Total households (1)	Number of persons per household

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1962

I INTRODUCTION

The data obtained in the 1962 Survey of Household Facilities and Equipment are weighted up to estimates of total households based on projections from the 1961 Census count of households. The projections of total households used for weighting previous surveys were based on earlier Census counts. To provide a greater degree of comparability between 1961 and 1962 data, estimates derived from the 1961 survey have been revised to the 1961 Census base and are contained in Appendix "A" of this report.

Since 1953, the Dominion Bureau of Statistics has carried out an annual survey of household characteristics and household equipment in private homes. This report presents the results of the latest survey, carried out in May 1962. The survey was made in conjunction with the monthly labour force survey. Over 35,000 households, chosen by area sampling methods in about 170 areas were visited.

There were several changes from 1961 in the content of the survey questionnaire. A question on window-type air conditioners was included for the first time and questions on electric floor polishers, lawn mowers and outboard motors, deleted from the questionnaire in 1961, were re-introduced. Vacuum cleaners, sewing machines, and car radios, which were covered in 1961, were not on the 1962 questionnaire.

A summarization by broad groupings of the characteristics covered in the tables of this report follows:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 24:	Household appliances
Table - 25:	Phonographs and record players
Tables 26 - 29:	Telephones, radios and T.V. sets
Table - 30:	Lawn mowers
Table - 31:	Outboard motors
Table - 32:	Automobile and garage facilities

Appendix A

Tables A1 - A31: 1961 tables revised to 1961 Census base
(see first paragraph).

II COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

III DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

IV RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators.

The approximate sampling variability of estimates of various sizes is shown in the table below. The chances are about 19 out of 20 that the difference between the estimate and the figures which would have been obtained from a complete census is less than the sampling variability indicated.

These estimates are averages since sampling variability differs from characteristic to characteristic and from year to year.

<u>Size of Estimate</u>	<u>Sampling Variability</u>
4,000	2,000
10,000	4,000
25,000	6,000
50,000	8,000
100,000	11,000
250,000	16,000
500,000	22,000
1,000,000	30,000

The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

The yearly estimates of household facilities, obtained from the Labour Force sample, are subject to a sampling variability whose size, for differing estimates, is approximated in the preceding table.

Differences from year-to-year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1962 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size from the one per cent used, but it is considered that for most analyses of household facilities the accuracy provided is adequate. In using this series of annual bulletins to establish year to year changes in household facilities, the effect of sampling variability will be reduced to some extent if percentages of households having given facilities are compared rather than estimates of actual numbers.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

Province	Households with radios (2)(3)						
	Total	By number of radios				Telephones	
		One radio	Two radios	Three radios	Four or more	With	Without
Canada	4,413	2,794	1,079	342	198	3,828	585
Nfld.	76	62	11	*	*	31	45
P.E.I.	23	20	*	*	*	14	9
N.S.	168	121	35	8	4	123	45
N.B.	124	89	23	7	5	91	33
Que.	1,171	854	222	61	34	1,020	151
Ont.	1,596	888	455	158	95	1,490	106
Man.	230	143	57	18	12	202	28
Sask.	236	148	61	19	8	184	52
Alta.	346	210	88	28	20	282	64
B.C.	443	259	124	41	19	391	52

(1) See Section II, "Coverage". (2) Does not include automobile radios.

(3) A change in the form of question in regard to radios appears to have resulted in a larger estimate of households with one radio and smaller estimates of households with two or more radios than would have been the case had the 1961 form of question been used.

* Less than 4,000. - See Section IV, "Reliability of Estimates".

Table 28. - F.M. receivers, by province, May, 1962

(estimates in thousands)

Province	Total households (1)	Households with F.M. receivers	Households without F.M. receivers

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1963

I INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1963 Labour Force Survey; approximately 30,000 households, chosen by area sampling methods in about 170 areas, were interviewed.

While the content of the questionnaire was mostly the same as in 1962, several changes were made. This year a question on household electrification was asked for the first time since 1959. Vacuum cleaners and sewing machines last covered in 1961 were also included in this year's questionnaire. The 1962 questions on electric floor polishers, lawn mowers and outboard motors were not used in the 1963 survey.

II CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Table - 18:	Electrification
Tables 19 - 26:	Household appliances
Table - 27:	Phonographs and record players
Tables 28 - 31:	Telephones, radios and T.V. sets
Table - 32:	Automobiles and garage facilities

III OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households by age of certain household appliances (cooking equipment, electric refrigerators, washing machines).

2. Principal heating equipment.
3. Principal heating fuel.
4. (a) Water supply and (b) Source of water.
5. Fuel used for piped hot water supply.
6. (a) Installed bath and (b) toilet facilities.
7. Electrification.
8. Cooking equipment.
9. Electric refrigerators and home freezers.
 - (a) Electric refrigerators
 - (b) Home freezers.
10. (a) Electric washing machines and (b) Electric clothes dryers.
11. Vacuum cleaners and sewing machines.
12. Phonographs and record players.
13. Radios.
14. (a) Telephones and (b) T.V. sets.
15. Automobiles.

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment.

1. Principal heating equipment and fuel; fuel used for piped water heating.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment.

1. Principal heating equipment and fuel; fuel used for piped water heating.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year-to-year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year-to-year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1963 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size, but it is considered that for most analyses of household facilities the accuracy provided is adequate.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is a prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1964

I - INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1964 Labour Force Survey; approximately 30,000 households, chosen by area sampling methods in about 200 areas, were interviewed.

Several changes from 1963 were made in the content of the survey questionnaire. Electric floor polishers, lawn mowers and outboard motors, (last covered in 1962) and automobile radios (last covered in 1961) were included this year. The 1963 questions on household electrification, vacuum cleaners and sewing machines were not used in the 1964 survey.

II - CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 24:	Household appliances
Table 25:	Phonographs and record players
Tables 26 - 29:	Telephones, radios and T.V. sets
Table - 30:	Lawn mowers
Table - 31:	Outboard motors
Table - 32:	Automobiles and garage facilities
Table - 33:	Automobile radios

III - OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households with specified household appliances by age of equipment (cooking equipment, electric refrigerators, washing machines).

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV - COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V. - DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENT OR FLAT: This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI - RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1964 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A new sample of improved design was brought into use for Alberta between the 1963 and 1964 surveys. Comparison of Alberta estimates between the two years will be affected by the absence of interdependence of the respective samples. New samples for the other provinces will be introduced during the next two years, as the revised samples for each province are completed.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1965

I - INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1965 Labour Force Survey; nearly 35,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

There were several changes from 1964 in the content of the survey questionnaire. Questions on vacuum cleaners and sewing machines, last used in 1963, were included again this year. The 1964 questions on electric floor polishers, lawn mowers and outboard motors were not used in the 1965 survey.

II - CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 25:	Household appliances
Table 26:	Phonographs and record players
Tables 27 - 30:	Telephones, radios and T.V. sets
Table 31:	Automobiles and garage facilities
Table 32:	Automobile radios

III - OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households with specified household appliances by age of equipment (cooking equipment, electric refrigerators, washing machines).

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV - COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V - DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENT OR FLAT: This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI - RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1965 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

New samples of improved design were brought into use for Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and for Alberta between the 1963 and 1964 surveys. Comparison of estimates for these provinces between the years mentioned will be affected by the absence of interdependence of the respective samples. New samples for the remaining provinces will be introduced before the 1966 survey.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1966

I - INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1966 Labour Force Survey; nearly 35,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

There were several changes from 1965 in the content of the survey questionnaire. New questions on battery-operated radios (see Table 28) and colour T.V. (see footnote (4) to Table 26) were added in 1966. Questions on floor polishers, lawn mowers and outboard motors, last used in 1964, were included again this year. The 1965 questions on vacuum cleaners and sewing machines were not used in the 1966 survey.

II - CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 24:	Household appliances
Table 25:	Phonographs and record players
Tables 26 - 29:	Telephones, radios and T.V. sets
Table 30:	Lawn mowers
Table 31:	Outboard motors
Table 32:	Automobiles and garage facilities
Table 33:	Automobile radios

III - OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households with specified household appliances by age of equipment (cooking equipment, electric refrigerators, washing machines).

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV - COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V - DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENT OR FLAT: This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI - RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1966 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

B.C.	503	201	144	85	73	464	39

(1) See Section IV, "Coverage". (2) All types except automobile radios. (3) A specific question on battery-operated radios was added in 1966. It appears, that by focussing particular attention on this type of radio, there was less tendency for respondents to overlook small transistor radios than in the past. A large part of the indicated decrease in single-radio households and increase in multiple-radio households between 1965 and 1966 is probably due to this factor. (4) Included in the number of "Households with T.V. sets" are 35,000 households with colour T.V. sets, of which 25,000 are in Ontario. *Less than 4,000. - See Section VI, "Reliability of Estimates"

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1967

1 - INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1967 Labour Force Survey; nearly 35,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

There were several changes from 1966 in the content of the survey questionnaire. Questions on vacuum cleaners and sewing machines, last used in 1965, were included again this year. The 1966 questions on floor polishers, lawn mowers and outboard motors were not used in the 1967 survey.

11 - CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 25:	Household appliances
Tables 26 - 29:	Telephones, radios and T.V. sets
Table 30:	Phonographs and record players
Table 31:	Automobiles and garage facilities
Table 32:	Automobile radios

111 - OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households with specified household appliances by age of equipment (cooking equipment, electric refrigerators, washing machines).

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV - COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V - DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENT OR FLAT: This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

V1 - RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1967 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1968

Special Note Regarding Comparability of 1968 Estimates with Previous Years

The data obtained in the 1968 Survey of Household Facilities and Equipment are weighted up to estimates of total households based on projections from the 1966 Census count of households. The projections of total households used for weighting the surveys carried out from 1962 and 1967, inclusive, were based on 1961 Census counts. Data from the 1968 survey are, therefore, not fully comparable with the originally published data from 1962 to 1967. To provide greater comparability between 1968 and 1967, estimates derived from the 1967 survey have been revised to the 1966 Census base and are contained in Appendix "A" of this report.

Revised estimates for the years 1962 to 1966 are in course of preparation and should be completed within several months' time. Such revised estimates for all or individual tables and for all five years or particular years will be available on request.

1 - INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1968 Labour Force Survey; nearly 35,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

There were several changes from 1967 in the content of the survey questionnaire. Questions on floor polishers, lawn mowers and outboard motors, last used in 1966, were included again this year. The 1967 questions on vacuum cleaners and sewing machines were not used in the 1968 survey.

II - CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 24:	Household appliances
Table 25:	Phonographs and record players
Tables 26 - 29:	Telephones, radios and T.V. sets
Table 30:	Lawn mowers
Table 31:	Outboard motors
Table 32:	Automobiles and garage facilities
Table 33:	Automobile radios

Appendix A

Tables A1-A32: 1967 tables revised to 1966 Census base (see "Special Note Regarding Comparability of 1968 Estimates with Previous Years" on page 3).

III - OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households with specified household appliances by age of equipment (cooking equipment, electric refrigerators, washing machines).

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment - continued

2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV - COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V - DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENT OR FLAT: This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;

APARTMENT OR FLAT - continued

- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

V1 - RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1968 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved

design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1969

Special Note Regarding Comparability of 1969 and 1968 Estimates with Previous Years

The data obtained in the 1969 and 1968 Surveys of Household Facilities and Equipment were weighted up to estimates of total households based on projections from the 1966 Census count of households. The projections of total households used for weighting the surveys carried out from 1962 and 1967, inclusive, were based on 1961 Census counts. Data from the 1969 and 1968 surveys are, therefore, not fully comparable with the originally published data from 1962 to 1967. To provide greater comparability with 1967, estimates derived from the 1967 survey were revised to the 1966 Census base and were published in Appendix "A" of the 1968 report.

Revised estimates of total households for the years 1962 to 1966 and of the data from the 1966 survey have been prepared and are available on request.

1 - INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1969 Labour Force Survey; about 30,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

There were several changes from 1968 in the content of the survey questionnaire. Questions on vacuum cleaners and sewing machines, last used in 1967, were included again this year. The 1968 questions on floor polishers, lawn mowers and outboard motors were not used in the 1969 survey. A change was made in the questionnaire this year to provide a distinction in record-playing equipment between radio-phonograph combinations and record-playing equipment without radio; Table 30 contains this breakdown. Data for record-playing equipment on the basis used in previous years are provided in Table 31.

II - CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 25:	Household appliances
Tables 26 - 29:	Telephones, radios and T.V. sets
Tables 30 - 31:	Record-playing equipment
Table 32:	Automobiles and garage facilities
Table 33:	Automobile radios

III - OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households with specified household appliances by age of equipment (cooking equipment, electric refrigerators, washing machines).

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment - continued

2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV - COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V - DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENT OR FLAT: This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;

APARTMENT OR FLAT - continued

- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

V1 - RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1969 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved

design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

HOUSEHOLD FACILITIES AND EQUIPMENT

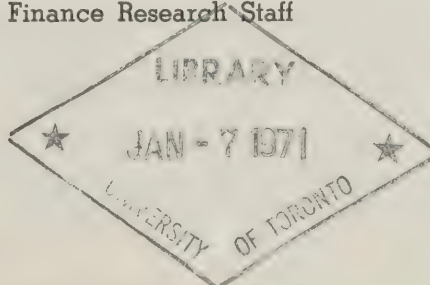

MAY 1970

Special Note Regarding Comparability of 1968 to 1970 Estimates with Previous Years

The data obtained in the 1968 to 1970 Surveys of Household Facilities and Equipment were weighted up to estimates of total households based on projections from the 1966 Census count of households. The projections of total households used for weighting the surveys carried out from 1962 to 1967, inclusive, were based on 1961 Census counts. Data from the 1968 to 1970 surveys are, therefore, not fully comparable with the originally published data from 1962 to 1967. To provide greater comparability with 1967, estimates derived from the 1967 survey were revised to the 1966 Census base and were published in Appendix "A" of the 1968 report.

Revised estimates of total households for the years 1962 to 1966 and of the data from the 1966 survey have been prepared and are available on request.

I. INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1970 Labour Force Survey; about 30,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

There were several changes from 1969 in the content of the survey questionnaire. Questions on floor polishers, lawn mowers and outboard motors, last used in 1968, were included again this year. The 1969 questions on vacuum cleaners and sewing machines were not used in the 1970 survey.

II. CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10-13:	Heating equipment and fuel
Tables 14-17:	Water supply and plumbing facilities
Tables 18-24:	Household appliances
Table 25:	Lawn mowers
Tables 26-29:	Telephones, radios and T.V. sets
Tables 30-31:	Record-playing equipment
Table 32:	Automobiles and garage facilities
Table 33:	Automobile radios
Table 34:	Outboard motors

III. OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. Canada as a whole

1. Number of households with specified household appliances by age of equipment (cooking equipment, electric refrigerators, washing machines).

B. Canada, by urban-rural categories - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV. COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V. DEFINITIONS

Dwelling. - A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

Household. - A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

Single detached dwelling. - This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling. - Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat. - This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

Rooms. - In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms. - Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI. RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken

using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1970 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

MAY 1971

I. Introduction

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1971 Labour Force Survey; about 30,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

Several changes were made in the content of the 1971 questionnaire. Below is a list of the affected questions,

Added Vacuum cleaners (last included in 1969)
Sewing machines (last included in 1969)
FM receivers in automobiles (new 1971)
Tape recorders (new 1971)
Snowmobiles (new 1971)
Overnight camping equipment (new 1971)
Boats (new 1971)

Dropped Floor polishers (last included in 1970)
Lawn mowers (last included in 1970)

Altered Garages (detail reduced in 1971 to "yes" or "no")
Radio phonographs (detail reduced in 1971 to "yes" or "no")
Record players without radio (detail reduced in 1971 to "yes" or "no")

II. Contents of the Tables

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8, 10, 11 and 24, for the provinces.

To facilitate the analysis of data on heating equipment, heating fuel and fuel for hot water supply, separate tables on these facilities have been published for single dwellings (single detached, double and row or terrace) and for total dwellings of all types (Tables 10-15, 17-18).

The table, "Age of Specified Household Equipment, Canada", (Table 24) is now published in this report rather than in the unpublished special tables available on request.

Tables on "Households with Radios, Showing Number with Telephones and T.V. Sets, by Province" and "Households with T.V. Sets, Showing Number with Telephones and Radios, by Province", have not been published in the 1971 report but are available on request.

III. Other Data Available

Following is a list of unpublished data which can be obtained upon request:

A. Canada, by Province

1. Households with radios, showing number with telephones and T.V. sets.
2. Households with T.V. sets, showing number with telephones and radios.

B. Canada, by urban-rural categories - percentage of households having certain facilities and equipment.

1. Principal heating equipment and fuel; fuel used for piped hot water supply.

MAI 1971

I. Introduction

Les statistiques publiées ici sont tirées du plus récent sondage annuel sur l'équipement ménager. L'enquête a été effectuée en même temps que l'enquête sur la population active de mai 1971; environ 30,000 ménages, choisis par sondage aréolaire dans 450 régions, ont été interrogés.

Le questionnaire utilisé en 1971 a subi plusieurs modifications. Les questions suivantes sont touchées:

Additions Aspirateurs (utilisée pour la dernière fois en 1969)
Machines à coudre (utilisée pour la dernière fois en 1969)
Récepteurs FM dans les automobiles (nouvelle en 1971)
Magnétophones (nouvelle en 1971)
Motoneiges (nouvelle en 1971)
Matériel de camping (nouvelle en 1971)
Embarcations (nouvelle en 1971)

Suppressions Polisseuses (utilisée pour la dernière fois en 1970)
Tondeuses à gazon (utilisée pour la dernière fois en 1970)

Modifications Garage (détails réduits en 1971 à "oui" ou "non")
Radio tourne-disques (détails réduits en 1971 à "oui" ou "non")
Tourne-disques sans radio (détails réduits en 1971 à "oui" ou "non")

II. Contenu des tableaux

Les tableaux présentent des données pour l'ensemble du Canada et, exception faite des tableaux 1, 5, 6, 8, 10, 11 et 24, pour les provinces.

Afin de simplifier l'analyse des données sur les systèmes de chauffage, les combustibles de chauffage et les combustibles utilisés pour l'eau chaude, nous en avons publié des tableaux distincts pour les logements individuels (maisons individuelles non attenantes, doubles et de rangée ou de terrasse) et pour l'ensemble des genres de logement (Tableaux 10 à 15 et 17 à 18).

Le tableau intitulé "Âge de certains appareils ménagers, Canada", (Tableau 24) fait maintenant partie du rapport plutôt que de la liste des tableaux spéciaux non publiés que l'on peut obtenir sur demande.

Les tableaux "Ménages équipés de radios, selon le nombre de téléphones et de téléviseurs, par province", et "Ménages équipés de téléviseurs, selon le nombre de téléphones et de radios, par province" ne font pas partie du rapport de 1971, mais on peut les obtenir sur demande.

III. Autres données disponibles

Les données suivantes sont disponibles sur demande:

A. Canada, par province

1. Ménages équipés de radios, selon le nombre de téléphones et de téléviseurs.
2. Ménages équipés de téléviseurs, selon le nombre de téléphones et de radios.

B. Canada, par catégorie d'habitat; pourcentage des ménages disposant de certains éléments de confort

1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude canalisée.

2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios (F.M., battery and total) T.V. sets (total and total colour) and record-playing equipment.
5. Automobiles and automobile radios.
6. Miscellaneous household equipment (1971 - air conditioners, sewing machines, vacuum cleaners, automatic dishwashers, tape recorders, snowmobiles, overnight camping equipment and boats).

C. Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment.

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios (F.M., battery and total) T.V. sets (total and total colour) and record-playing equipment.
4. Automobiles and automobile radios.
5. Miscellaneous household equipment (1971 - air conditioners, sewing machines, vacuum cleaners, automatic dishwashers, tape recorders, snowmobiles, overnight camping equipment and boats).

IV. Coverage

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V. Definitions

Dwelling. - A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

Household. - A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

Single detached dwelling. - This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling. - Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat. - This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;

2. Eau courante et installations sanitaires.
3. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
4. Téléphones, radios (FM, à piles et nombre total), téléviseurs (nombre total et télécouleurs) et tourne-disques.
5. Automobiles et radios d'automobile.
6. Appareils ménagers divers (1971 - climatiseurs, machines à coudre, aspirateurs, lave-vaisselle automatiques, magnétophones, motoneiges, matériel de camping et embarcations).

C. Régions métropolitaines de 50,000 ménages et plus; pourcentage des ménages disposant de certains éléments de confort.

1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude canalisée.
2. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
3. Téléphones, radios (FM, à piles et nombre total), téléviseurs (nombre total et télécouleurs) et tourne-disques.
4. Automobiles et radios d'automobile.
5. Appareils ménagers divers (1971 - climatiseurs, machines à coudre, aspirateurs, lave-vaisselle automatiques, magnétophones, motoneiges, matériel de camping et embarcations).

IV. Champ de l'enquête

L'échantillon utilisé pour l'enquête est représentatif de tous les ménages au Canada, à quelques exceptions près. Sont exclus les ménages vivant au Yukon et dans les Territoires du Nord-Ouest, dans une réserve indienne, dans une institution, dans un camp militaire ou autre logement collectif comme les hôtels, les grandes pensions, les clubs, les camps de bûcherons et les baraquements de travailleurs; sont aussi exclus certains ménages privés vivant dans une remorque, une maison d'été, un bateau, etc.

V. Définitions

Logement. - ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor ou un escalier commun à l'intérieur.

Ménage. - personne ou groupe de personnes occupant un logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés.

Logement individuel non attenant. - il s'agit ordinairement d'une maison individuelle, c.-à-d. d'une maison ne comprenant qu'un logement et non rattachée à une autre immeuble ou à une autre construction.

Logement individuel attenant. - chaque moitié d'une maison jumelée (ou double) et chaque section d'une maison de rangée ou de terrasse.

Appartement ou plain-pied. - ce genre de logement comprend:

- (i) les logements dans les maisons de rapport ou les hôtels résidentiels;
- (ii) les logements dans les duplex ou les triplex, c.-à-d. les immeubles où la division entre logements est horizontale;
- (iii) les logements dans des maisons transformées;

- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

- (iv) les pièces d'habitation au-dessus ou à l'arrière d'un magasin, d'un restaurant, d'un garage ou d'un autre commerce;
- (v) les logements de concierge dans les écoles, les églises, les entrepôts, etc; et
- (vi) les logements privés pour employés dans les hôpitaux et les institutions.

Rooms. — In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms. — Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI. Reliability of Estimates

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1971 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

Pièces. — Pour calculer le nombre de pièces d'un logement, on ne compte que les pièces servant ou pouvant servir à l'habitation, y compris les pièces occupées par les serviteurs, les pensionnaires ou les membres de familles en pension. Ne sont pas comptées comme pièces: les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptées que si elles sont complètement aménagées et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

Chambres à coucher. — Sont des "chambres à coucher" toutes les pièces conçues, meublées et utilisées comme telles, même si elles ne servent que de temps à autre, (les chambres d'ami, par exemple). Les studios et autres pièces de séjour et de repos ne le sont pas. Dans les logements d'une seule pièce (par exemple, une garçonnrière) et dans bien d'autres petits logements, il n'y a pas de chambre à coucher.

VI. Fiabilité des estimations

Les estimations présentées ici ont pour origine un échantillon de ménages et peuvent différer des chiffres qu'aurait donné un recensement exhaustif fait avec les mêmes questionnaires, les mêmes explications et les mêmes enquêteurs. En règle générale, plus l'estimation est petite, plus la variabilité relative d'échantillonnage est grande. La variabilité d'échantillonnage est nettement au-dessus de 50 % pour une estimation de moins de 4,000. Dans les tableaux, les estimations inférieures à 4,000 sont remplacées par un astérisque.

Les différences d'une année à l'autre entre estimations correspondantes sont elles-même sujettes à variation en fonction de la taille des estimations, de leur variabilité inhérente et de l'interdépendance des échantillons retenus. En ce qui concerne l'enquête sur l'équipement ménager, le nombre de ménages enquêtés, et dans certains cas, les régions comprises dans l'échantillon varient d'année en année. Les estimations publiées ici sont les meilleures de 1970 en ce qui concerne le nombre de ménages et leurs caractéristiques. Toutefois, les différences entre années successives, surtout pour les petites provinces, dans des domaines où les changements ont été insignifiants, sont sujettes à une importante variation d'échantillonnage.

La variabilité d'échantillonnage des estimations du changement d'une année à l'autre pendant la période 1963-1966 s'est trouvée fortement accrue par l'introduction d'un nouveau plan d'échantillonnage. Des nouveaux échantillons, de conception améliorée, ont été utilisés à Terre-Neuve, en Ontario, au Manitoba, en Saskatchewan et en Colombie-Britannique en 1966, dans l'Île-du-Prince-Édouard, en Nouvelle-Écosse et au Nouveau-Brunswick en 1965 et en Alberta en 1964. La non-interdépendance des échantillons respectifs au cours de cette période influera donc sur toute comparaison des estimations pour une province donnée ou pour l'ensemble du Canada.

Outre cette variabilité d'échantillonnage, d'autres facteurs font que les chiffres recueillis par sondage ou par recensement diffèrent des chiffres réels; il s'agit des erreurs attribuables aux enquêteurs et aux enquêtés:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

The sample data is weighted up to estimates of total households derived from the Censuses of Canada. The projections of total households used for weighting the surveys from 1962 to 1967 were based on the 1961 Census and the survey estimates from 1968 to 1971 were taken from the 1966 Census. To provide continuity, estimates for 1967 were recalculated to the 1966 base and published in the 1968 report, Appendix "A". Estimates of total households were revised for the years 1962 to 1966 and are available on request.

Weighting procedures were modified in 1971 to improve adjustment for non-response. This weighting refinement does not affect the estimates of total provincial and Canadian households, which are based on the Census, but may have slightly altered the estimates of characteristics.

1. L'enquêteur peut mal interpréter les concepts et les définitions en dépit d'une préparation soignée.
2. L'enquêteur peut accidentellement formuler ses questions de façon à influencer les réponses de l'enquêté.
3. L'enquêté peut accidentellement formuler ses réponses de façon à influencer les questions de l'enquêteur.
4. L'enquêteur ou l'enquêté peut délibérément donner une indication erronée.

L'erreur non due à l'échantillonnage est aussi répandue dans un dénombrement exhaustif que dans un échantillon et peut même, dans certains cas, dépasser l'erreur d'échantillonnage.

Les données fragmentaires sont pondérées en fonction des estimations du nombre total de ménages d'après les recensements du Canada. Les projections du nombre total de ménages qui a servi de coefficient de pondération des chiffres des enquêtes de 1962 à 1967 prenaient comme point de départ le recensement de 1961, alors que les enquêtes menées de 1968 à 1971 étaient pondérées en fonction du recensement de 1966. Pour assurer la continuité, les estimations de 1967 ont été rétablies sur la base de 1966 et publiées dans le rapport de 1968, à l'annexe "A". Les estimations du nombre total de ménages ont été rectifiées pour les années de 1962 à 1966 et sont disponibles sur demande.

Les méthodes de pondération ont été modifiées en 1971 pour permettre de meilleurs ajustements des non-réponse. Ce perfectionnement n'influe pas sur les estimations du nombre total de ménage dans les provinces et dans l'ensemble du Canada, puisqu'elles se fondent sur le recensement, mais il peut avoir eu un certain effet sur les estimations des caractéristiques.

MAY 1972

I. Introduction

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1972 Labour Force Survey; about 30,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

Several changes were made in the content of the 1972 questionnaire. Below is a list of the affected questions:

Added Outboard motors (last included in 1970)
Electric floor polishers (last included in 1970)
Lawn mowers (last included in 1970)

Black and white television sets (new 1972)
Pianos (new 1972)
Adult-size bicycles (new 1972)
Portable humidifiers (new 1972)
Snow blowers (new 1972)
Rooms with carpeting (new 1972)

Dropped Tape recorders (last included in 1971)

Vacuum cleaners (last included in 1971)

Sewing machines (last included in 1971)

Overnight camping equipment (last included in 1971)
Boats (last included in 1971)

II. Contents of the Tables

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8, 10, 11 and 24, for the provinces.

To facilitate the analysis of data on heating equipment, heating fuel and fuel for hot water supply, separate tables on these facilities have been published for single dwellings (single detached, double and row or terrace) and for total dwellings of all types (Tables 10-15, 17-18).

The table, "Age of Specified Household Equipment, Canada", (Table 24) is now published in this report rather than in the unpublished special tables available on request.

Tables on "Households with Radios, Showing Number with Telephones and T.V. Sets, by Province" and "Households with T.V. Sets, Showing Number with Telephones and Radios, by Province", have not been published in the 1972 report but are available on request.

III. Other Data Available

Following is a list of unpublished data which can be obtained upon request:

- A. Canada, by Province
 1. Households with radios, showing number with telephones and T.V. sets.
 2. Households with T.V. sets, showing number with telephones and radios.
- B. Canada, by urban-rural categories - percentage of households having certain facilities and equipment.
 1. Principal heating equipment and fuel; fuel used for piped hot water supply.

MAI 1972

I. Introduction

Les statistiques publiées ici sont tirées du plus récent sondage annuel sur l'équipement ménager. L'enquête a été effectuée en même temps que l'enquête sur la population active de mai 1972; environ 30,000 ménages, choisis par sondage aréolaire dans 450 régions, ont été interrogés.

Le questionnaire utilisé en 1972 a subi plusieurs modifications. Les questions suivantes sont touchées:

Additions Moteurs hors-bord (utilisée pour la dernière fois en 1970)
Polisseuses à parquets (utilisée pour la dernière fois en 1970)
Tondeuses (utilisée pour la dernière fois en 1970)
Téléviseurs en noir et blanc (nouvelle 1972)
Pianos (nouvelle 1972)
Bicyclettes d'adultes (nouvelle 1972)
Humidificateurs portatifs (nouvelle 1972)
Souffleuses à neige (nouvelle 1972)
Pièces avec tapis mur à mur (nouvelle 1972)

Suppressions Magnétophones (utilisée pour la dernière fois en 1971)
Aspirateurs (utilisée pour la dernière fois en 1971)
Machines à coudre (utilisée pour la dernière fois en 1971)
Matériel de camping (utilisée pour la dernière fois en 1971)
Embarcations (utilisée pour la dernière fois en 1971)

II. Contenu des tableaux

Les tableaux présentent des données pour l'ensemble du Canada et, exception faite des Tableaux 1, 5, 6, 8, 10, 11 et 24, pour les provinces.

Afin de simplifier l'analyse des données sur les systèmes de chauffage, les combustibles de chauffage et les combustibles utilisés pour l'eau chaude, nous en avons publié des tableaux distincts pour les logements individuels (maisons individuelles non attenantes, doubles et de rangée ou de terrasse) et pour l'ensemble des genres de logement (Tableaux 10 à 15 et 17 à 18).

Le tableau intitulé "Âge de certains appareils ménagers, Canada", (Tableau 24) fait maintenant partie du rapport plutôt que de la liste des tableaux spéciaux non publiés que l'on peut obtenir sur demande.

Les tableaux "Ménages équipés de radios, selon le nombre de téléphones et de téléviseurs, par province", et "Ménages équipés de téléviseurs, selon le nombre de téléphones et de radios, par province" ne font pas partie du rapport de 1972, mais on peut les obtenir sur demande.

III. Autres données disponibles

Les données suivantes sont disponibles sur demande:

- A. Canada, par province
 1. Ménages équipés de radios, selon le nombre de téléphones et de téléviseurs.
 2. Ménages équipés de téléviseurs, selon le nombre de téléphones et de radios.
- B. Canada, par catégorie d'habitat; pourcentage des ménages disposant de certains éléments de confort
 1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude canalisée.

2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios (F.M., battery and total) T.V. sets (total, black and white and colour) and record-playing equipment.
5. Automobiles and automobile radios.
6. Miscellaneous household equipment (1972 - air conditioners, automatic dishwashers, floor polishers, outboard motors, bicycles, snowmobiles, pianos, humidifiers, rooms with carpeting, lawn mowers, snow blowers).

C. Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment.

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios (F.M., battery and total) T.V. sets (total, black and white, and colour) and record-playing equipment.
4. Automobiles and automobile radios.
5. Miscellaneous household equipment (1972 - air conditioners, automatic dishwashers, floor polishers, outboard motors, bicycles, snowmobiles, pianos, humidifiers, rooms with carpeting, lawn mowers, snow blowers).

IV. Coverage

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V. Definitions

Dwelling. - A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

Household. - A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

Single detached dwelling. - This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling. - Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat. - This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;

2. Eau courante et installations sanitaires.
3. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
4. Téléphones, radios (FM, à piles et nombre total), téléviseurs (nombre total, téléviseurs en noir et blanc et de télécouleurs) et tourne-disques.
5. Automobiles et radios d'automobile.
6. Appareils ménagers divers (1972 - Appareils de climatisation, lave-vaisselle automatiques, polisseuses à parquets, moteurs hors-bord, bicyclettes, moto-neiges, pianos, humidificateurs portatifs, pièces avec tapis, tondeuses, souffleuses à neige.)

C. Régions métropolitaines de 50,000 ménages et plus: pourcentage des ménages disposant de certains éléments de confort.

1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude canalisée.
2. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
3. Téléphones, radios (FM, à piles et nombre total), téléviseurs (nombre total, téléviseurs en noir et blanc et télécouleurs) et tourne-disques.
4. Automobiles et radios d'automobile.
5. Appareils ménagers divers (1972 - Appareils de climatisation, lave-vaisselle automatiques, polisseuses à parquets, moteurs hors-bord, bicyclettes, moto-neiges, pianos, humidificateurs portatifs, pièces avec tapis, tondeuses, souffleuses à neige).

IV. Champ de l'enquête

L'échantillon utilisé pour l'enquête est représentatif de tous les ménages au Canada, à quelques exceptions près. Sont exclus les ménages vivant au Yukon et dans les Territoires du Nord-Ouest, dans une réserve indienne, dans une institution, dans un camp militaire ou autre logement collectif comme les hôtels, les grandes pensions, les clubs, les camps de bûcherons et les baraquements de travailleurs; sont aussi exclus certains ménages privés vivant dans une remorque, une maison d'été, un bateau, etc.

V. Définitions

Logement. - ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor ou un escalier commun à l'intérieur.

Ménage. - personne ou groupe de personnes occupant un logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés.

Logement individuel non attenant. - il s'agit ordinairement d'une maison individuelle, c.-à-d. d'une maison ne comprenant qu'un logement et non rattachée à une autre immeuble ou à une autre construction.

Logement individuel attenant. - chaque moitié d'une maison jumelée (ou double) et chaque section d'une maison de rangée ou de terrasse.

Appartement ou plain-pied. - ce genre de logement comprend:

- (i) les logements dans les maisons de rapport ou les hôtels résidentiels;
- (ii) les logements dans les duplex ou les triplex, c.-à-d. les immeubles où la division entre logements est horizontale;
- (iii) les logements dans des maisons transformées;

- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

- (iv) les pièces d'habitation au-dessus ou à l'arrière d'un magasin, d'un restaurant, d'un garage ou d'un autre commerce;
- (v) les logements de concierge dans les écoles, les églises, les entrepôts, etc.; et
- (vi) les logements privés pour employés dans les hôpitaux et les institutions.

Rooms. — In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms. — Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI. Reliability of Estimates

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1972 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

Pièces. — Pour calculer le nombre de pièces d'un logement, on ne compte que les pièces servant ou pouvant servir à l'habitation, y compris les pièces occupées par les serviteurs, les pensionnaires ou les membres de familles en pension. Ne sont pas comptées comme pièces: les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptées que si elles sont complètement aménagées et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

Chambres à coucher. — Sont des "chambres à coucher" toutes les pièces conçues, meublées et utilisées comme telles, même si elles ne servent que de temps à autre, (les chambres d'ami, par exemple). Les studios et autres pièces de séjour et de repos ne le sont pas. Dans les logements d'une seule pièce (par exemple, une garçonnière) et dans bien d'autres petits logements, il n'y a pas de chambre à coucher.

VI. Fiabilité des estimations

Les estimations présentées ici ont pour origine un échantillon de ménages et peuvent différer des chiffres qu'aurait donné un recensement exhaustif fait avec les mêmes questionnaires, les mêmes explications et les mêmes enquêteurs. En règle générale, plus l'estimation est petite, plus la variabilité relative d'échantillonnage est grande. La variabilité d'échantillonnage est nettement au-dessus de 50 % pour une estimation de moins de 4,000. Dans les tableaux, les estimations inférieures à 4,000 sont remplacées par un astérisque.

Les différences d'une année à l'autre entre estimations correspondantes sont elles-même sujettes à variation en fonction de la taille des estimations, de leur variabilité inhérente et de l'interdépendance des échantillons retenus. En ce qui concerne l'enquête sur l'équipement ménager, le nombre de ménages enquêtés, et dans certains cas, les régions comprises dans l'échantillon varient d'année en année. Les estimations publiées ici sont les meilleures de 1972 en ce qui concerne le nombre de ménages et leurs caractéristiques. Toutefois, les différences entre années successives, surtout pour les petites provinces, dans des domaines où les changements ont été insignifiants, sont sujettes à une importante variation d'échantillonnage.

La variabilité d'échantillonnage des estimations du changement d'une année à l'autre pendant la période 1963-1966 s'est trouvée fortement accrue par l'introduction d'un nouveau plan d'échantillonnage. Des nouveaux échantillons, de conception améliorée, ont été utilisés à Terre-Neuve, en Ontario, au Manitoba, en Saskatchewan et en Colombie-Britannique en 1966, dans l'Île-du-Prince-Édouard, en Nouvelle-Écosse, au Nouveau-Brunswick et au Québec en 1965 et en Alberta en 1964. La non-interdépendance des échantillons respectifs au cours de cette période influera donc sur toute comparaison des estimations pour une province donnée ou pour l'ensemble du Canada.

Outre cette variabilité d'échantillonnage, d'autres facteurs font que les chiffres recueillis par sondage ou par recensement diffèrent des chiffres réels; il s'agit des erreurs attribuables aux enquêteurs et aux enquêtés:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

The sample data is weighted up to estimates of total households derived from the Censuses of Canada. The projections of total households used for weighting the surveys from 1962 to 1967 were based on the 1961 Census and the survey estimates from 1968 to 1971 were taken from the 1966 Census. To provide continuity, estimates for 1967 were recalculated to the 1966 base and published in the 1968 report, Appendix "A". Estimates of total households were revised for the years 1962 to 1966 and are available on request. The projection of total households used for weighting the 1972 survey is based on the 1971 Census.

Weighting procedures were modified in 1971 to improve adjustment for non-response. This weighting refinement does not affect the estimates of total provincial and Canadian households, which are based on the Census, but may have slightly altered the estimates of characteristics.

1. L'enquêteur peut mal interpréter les concepts et les définitions en dépit d'une préparation soignée.
2. L'enquêteur peut accidentellement formuler ses questions de façon à influencer les réponses de l'enquêté.
3. L'enquêté peut accidentellement formuler ses réponses de façon à influencer les questions de l'enquêteur.
4. L'enquêteur ou l'enquêté peut délibérément donner une indication erronée.

L'erreur non due à l'échantillonnage est aussi répandue dans un dénombrement exhaustif que dans un échantillon et peut même, dans certains cas, dépasser l'erreur d'échantillonnage.

Les données fragmentaires sont pondérées en fonction des estimations du nombre total de ménages d'après les recensements du Canada. Les projections du nombre total de ménages qui a servi de coefficient de pondération des chiffres des enquêtes de 1962 à 1967 prenaient comme point de départ le recensement de 1961, alors que les enquêtes menées de 1968 à 1971 étaient pondérées en fonction du recensement de 1966. Pour assurer la continuité, les estimations de 1967 ont été rétablies sur la base de 1966 et publiées dans le rapport de 1968, à l'annexe "A". Les estimations du nombre total de ménages ont été rectifiées pour les années de 1962 à 1966 et sont disponibles sur demande. La projection du nombre total de ménages utilisée pour pondérer les résultats de l'enquête de 1972 est fondée sur le recensement de 1971.

Les méthodes de pondération ont été modifiées en 1971 pour permettre de meilleurs ajustements des non-réponse. Ce perfectionnement n'influe pas sur les estimations du nombre total de ménages dans les provinces et dans l'ensemble du Canada, puisqu'elles se fondent sur le recensement, mais il peut avoir eu un certain effet sur les estimations des caractéristiques.

Questionnaire de l'enquête	29

APRIL 1973

I. Introduction

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the April 1973 Labour Force Survey; about 30,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

Several changes were made in the content of the 1973 questionnaire.(1) Below is a list of the affected questions:

<u>Added</u>	Electric sewing machines (last included in 1971)
	Vacuum cleaners (last included in 1971)
	Tape-recorders (last included in 1971)
	Vacation homes (new 1973)
<u>Dropped</u>	Electric floor polishers (last included in 1972)
	Outboard motors (last included in 1972)
	Pianos (last included in 1972)
	Portable humidifiers (last included in 1972)
	Rooms with carpeting (last included in 1972)
	Lawn mowers (last included in 1972)
	Snow blower (last included in 1972)

II. Contents of the Tables

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8, 10, 11 and 24, for the provinces.

To facilitate the analysis of data on heating equipment, heating fuel and fuel for hot water supply, separate tables on these facilities have been published for single dwellings (single detached, double and row or terrace) and for total dwellings of all types (Tables 10-15, 17-18).

The table, "Age of Specified Household Equipment, Canada", (Table 24) is now published in this report rather than in the unpublished special tables available on request.

Tables on "Households with Radios, Showing Number with Telephones and T.V. Sets, by Province" and "Households with T.V. Sets, Showing Number with Telephones and Radios, by Province", have not been published in the 1973 report but are available on request.

III. Other Data Available

Following is a list of unpublished data which can be obtained upon request:

- A. Canada, by Province
 1. Households with radios, showing number with telephones and T.V. sets.
 2. Households with T.V. sets, showing number with telephones and radios.
- B. Canada, by urban-rural categories - percentage of households having certain facilities and equipment.
 1. Principal heating equipment and fuel; fuel used for piped hot water supply.

AVRIL 1973

I. Introduction

Les statistiques publiées ici sont tirées du plus récent sondage annuel sur l'équipement ménager. L'enquête a été effectuée en même temps que l'enquête sur la population active d'avril 1973; environ 30,000 ménages, choisis par sondage aréolaire dans 450 régions, ont été interrogés.

Le questionnaire utilisé en 1973(1) a subi plusieurs modifications. Les questions suivantes sont touchées:

<u>Additions</u>	Machines à coudre électriques (prises en compte pour la dernière fois en 1971)
	Aspirateurs électriques (pris en compte pour la dernière fois en 1971)
	Magnétophones (pris en compte pour la dernière fois en 1971)
	Résidences secondaires (nouvelle 1973)
<u>Suppressions</u>	Polisseuses à parquets électriques (prises en compte pour la dernière fois en 1972)
	Moteurs hors-bord (pris en compte pour la dernière fois en 1972)
	Pianos (pris en compte pour la dernière fois en 1972)
	Humidificateurs portatifs (pris en compte pour la dernière fois en 1972)
	Pièces avec moquette (prises en compte pour la dernière fois en 1972)
	Tondeuses à gazon (prises en compte pour la dernière fois en 1972)
	Souffleuses à neige (prises en compte pour la dernière fois en 1972)

II. Contenu des tableaux

Les tableaux présentent des données pour l'ensemble du Canada et, exception faite des Tableaux 1, 5, 6, 8, 10, 11 et 24, pour les provinces.

Afin de simplifier l'analyse des données sur les systèmes de chauffage, les combustibles de chauffage et les combustibles utilisés pour l'eau chaude, nous en avons publié des tableaux distincts pour les logements individuels (maisons individuelles non attenantes, doubles et de rangée ou de terrasse) et pour l'ensemble des genres de logement (Tableaux 10 à 15 et 17 à 18).

Le tableau intitulé "Âge de certains appareils ménagers, Canada", (Tableau 24) fait maintenant partie du rapport plutôt que de la liste des tableaux spéciaux non publiés que l'on peut obtenir sur demande.

Les tableaux "Ménages équipés de radios, selon le nombre de téléphones et de téléviseurs, par province", et "Ménages équipés de téléviseurs, selon le nombre de téléphones et de radios, par province" ne font pas partie du rapport de 1973, mais on peut les obtenir sur demande.

III. Autres données disponibles

Les données suivantes sont disponibles sur demande:

- A. Canada, par province
 1. Ménages équipés de radios, selon le nombre de téléphones et de téléviseurs.
 2. Ménages équipés de téléviseurs, selon le nombre de téléphones et de radios.
- B. Canada, par catégorie d'habitat; pourcentage des ménages disposant de certains éléments de confort.
 1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude canalisée.

(1) See Section VIII, "Appendix".

(1) Voir la section VIII, "Appendice".

2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios (F.M., battery and total) T.V. sets (total, black and white and colour) and record-playing equipment.
5. Automobiles and automobile radios.
6. Miscellaneous household equipment (1973 - air conditioners, automatic dishwashers, sewing machines, vacuum cleaners, tape-recorders, bicycles, snowmobiles, vacation homes).

C. Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment.

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios (F.M., battery and total) T.V. sets (total, black and white, and colour) and record-playing equipment.
4. Automobiles and automobile radios.
5. Miscellaneous household equipment (1973 - air conditioners, automatic dishwashers, sewing machines, vacuum cleaners, tape-recorders, bicycles, snowmobiles, vacation homes).

IV. Coverage

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V. Definitions

Dwelling. - A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

Household. - A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

Single detached dwelling. - This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling. - Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat. - This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;

2. Eau courante et installations sanitaires.
3. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
4. Téléphones, radios (FM, à piles et nombre total), téléviseurs (nombre total, téléviseurs en noir et blanc et de télécouleurs) et tourne-disques.
5. Automobiles et radios d'automobile.
6. Appareils ménagers divers (1973 - climatiseurs, lave-vaisselle automatiques, machines à coudre, aspirateurs, magnétophones, bicyclettes, motoneiges, résidences secondaires).

C. Régions métropolitaines de 50,000 ménages et plus: pourcentage des ménages disposant de certains éléments de confort.

1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude canalisée.
2. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
3. Téléphones, radios (FM, à piles et nombre total), téléviseurs (nombre total, téléviseurs en noir et blanc et télécouleurs) et tourne-disques.
4. Automobiles et radios d'automobile.
5. Appareils ménagers divers (1973 - climatiseurs, lave-vaisselle automatiques, machines à coudre, aspirateurs, magnétophones, bicyclettes, motoneiges, résidences secondaires).

IV. Champ de l'enquête

L'échantillon utilisé pour l'enquête est représentatif de tous les ménages au Canada, à quelques exceptions près. Sont exclus les ménages vivant au Yukon et dans les Territoires du Nord-Ouest, dans une réserve indienne, dans une institution, dans un camp militaire ou autre logement collectif comme les hôtels, les grandes pensions, les clubs, les camps de bûcherons et les baraquements de travailleurs; sont aussi exclus certains ménages privés vivant dans une remorque, une maison d'été, un bateau, etc.

V. Définitions

Logement. - ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor ou un escalier commun à l'intérieur.

Ménage. - personne ou groupe de personnes occupant un logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés.

Logement individuel non attenant. - il s'agit ordinairement d'une maison individuelle, c.-à-d. d'une maison ne comprenant qu'un logement et non rattachée à un autre immeuble ou à une autre construction.

Logement individuel attenant. - chaque moitié d'une maison jumelée (ou double) et chaque section d'une maison de rangée ou de terrasse.

Appartement ou plain-pied. - ce genre de logement comprend:

- (i) les logements dans les maisons de rapport ou les hôtels résidentiels;
- (ii) les logements dans les duplex ou les triplex, c.-à-d. les immeubles où la division entre logements est horizontale;
- (iii) les logements dans des maisons transformées;

- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

- (iv) les pièces d'habitation au-dessus ou à l'arrière d'un magasin, d'un restaurant, d'un garage ou d'un autre commerce;
- (v) les logements de concierge dans les écoles, les églises, les entrepôts, etc; et
- (vi) les logements privés pour employés dans les hôpitaux et les institutions.

Rooms. — In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms. — Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI. Reliability of Estimates

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1973 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

Pièces. — Pour calculer le nombre de pièces d'un logement, on ne compte que les pièces servant ou pouvant servir à l'habitation, y compris les pièces occupées par les serviteurs, les pensionnaires ou les membres de familles en pension. Ne sont pas comptées comme pièces: les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptées que si elles sont complètement aménagées et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

Chambres à coucher. — Sont des "chambres à coucher" toutes les pièces conçues, meublées et utilisées comme telles, même si elles ne servent que de temps à autre, (les chambres d'ami, par exemple). Les studios et autres pièces de séjour et de repos ne le sont pas. Dans les logements d'une seule pièce (par exemple, une garçonnière) et dans bien d'autres petits logements, il n'y a pas de chambre à coucher.

VI. Fiabilité des estimations

Les estimations présentées ici ont pour origine un échantillon de ménages et peuvent différer des chiffres qu'aurait donné un recensement exhaustif fait avec les mêmes questionnaires, les mêmes explications et les mêmes enquêteurs. En règle générale, plus l'estimation est petite, plus la variabilité relative d'échantillonnage est grande. La variabilité d'échantillonnage est nettement au-dessus de 50 % pour une estimation de moins de 4,000. Dans les tableaux, les estimations inférieures à 4,000 sont remplacées par un astérisque.

Les différences d'une année à l'autre entre estimations correspondantes sont elles-même sujettes à variation en fonction de la taille des estimations, de leur variabilité inhérente et de l'interdépendance des échantillons retenus. En ce qui concerne l'enquête sur l'équipement ménager, le nombre de ménages enquêtés, et dans certains cas, les régions comprises dans l'échantillon varient d'année en année. Les estimations publiées ici sont les meilleures de 1973 en ce qui concerne le nombre de ménages et leurs caractéristiques. Toutefois, les différences entre années successives, surtout pour les petites provinces, dans des domaines où les changements ont été insignifiants, sont sujettes à une importante variation d'échantillonnage.

La variabilité d'échantillonnage des estimations du changement d'une année à l'autre pendant la période 1963-1966 s'est trouvée fortement accrue par l'introduction d'un nouveau plan d'échantillonnage. Des nouveaux échantillons, de conception améliorée, ont été utilisés à Terre-Neuve, en Ontario, au Manitoba, en Saskatchewan et en Colombie-Britannique en 1966, dans l'île-du-Prince-Édouard, en Nouvelle-Écosse, au Nouveau-Brunswick et au Québec en 1965 et en Alberta en 1964. La non-interdépendance des échantillons respectifs au cours de cette période influera donc sur toute comparaison des estimations pour une province donnée ou pour l'ensemble du Canada.

Outre cette variabilité d'échantillonnage, d'autres facteurs font que les chiffres recueillis par sondage ou par recensement diffèrent des chiffres réels; il s'agit des erreurs attribuables aux enquêteurs et aux enquêtés:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

The sample data are weighted up to estimates of total households derived from the Censuses of Canada. The projections of total households used for weighting the surveys from 1962 to 1967 were based on the 1961 Census and the survey estimates from 1968 to 1971 were taken from the 1966 Census. The projections of total households used for weighting the 1972 and 1973 surveys were based on the 1971 Census counts.

To provide greater comparability, estimates derived from the 1971 survey are being revised to the 1971 Census base. Similarly, to reflect revisions in the original projections of total households, adjustments are being made in the estimates derived from surveys taken in the intercensal years 1967-1970. It is anticipated that this work will be completed by the end of February 1974. The revised estimates for all or individual tables and for all five years of particular years will be available on request.

Weighting procedures were modified in 1971 to improve adjustment for non-response. This weighting refinement does not affect the estimates of total provincial and Canadian households, which are based on the Census, but may have slightly altered the estimates of characteristics.

1. L'enquêteur peut mal interpréter les concepts et les définitions en dépit d'une préparation soignée.
2. L'enquêteur peut accidentellement formuler ses questions de façon à influencer les réponses de l'enquêté.
3. L'enquêté peut accidentellement formuler ses réponses de façon à influencer les questions de l'enquêteur.
4. L'enquêteur ou l'enquêté peut délibérément donner une indication erronée.

L'erreur non due à l'échantillonnage est aussi répandue dans un dénombrement exhaustif que dans un échantillon et peut même, dans certains cas, dépasser l'erreur d'échantillonnage.

Les données fragmentaires sont pondérées en fonction des estimations du nombre total de ménages déduites des recensements du Canada. Les projections du nombre total de ménages qui ont servi à pondérer les enquêtes de 1962 à 1967 prenaient comme point de départ le recensement de 1961, alors que les enquêtes menées de 1968 à 1971 étaient pondérées en fonction du recensement de 1966. Les projections du nombre total de ménages utilisées pour pondérer les résultats des enquêtes de 1972 et de 1973 étaient fondées sur le recensement de 1971.

Pour assurer une meilleure comparabilité, on est en train de rectifier les estimations déduites de l'enquête de 1971 en fonction du recensement de 1971. De même, en vue de tenir compte des rectifications apportées aux premières projections du nombre total des ménages, on est en train de rajuster les estimations déduites des enquêtes effectuées au cours des années intercensitaires 1967-1970. Nous espérons que ce travail sera terminé pour la fin de février 1974. On pourra alors se procurer sur demande les estimations rectifiées pour chaque tableau ou l'ensemble des tableaux pour chacune ou l'ensemble des cinq années.

Les méthodes de pondération ont été modifiées en 1971 pour permettre de meilleurs ajustements des non-réponse. Ce perfectionnement n'influe pas sur les estimations du nombre total de ménages dans les provinces et dans l'ensemble du Canada, puisqu'elles se fondent sur le recensement, mais il peut avoir eu un certain effet sur les estimations des caractéristiques.

I. Introduction

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the April 1974 Labour Force Survey; about 30,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

Several changes were made in the content of the 1974 questionnaire.(1) Below is a list of the affected questions:

<u>Added</u>	Outboard motors (last included in 1972)
	Electric floor polishers (last included in 1972)
	Snow-blowers (last included in 1972)
	Lawn-mowers (last included in 1972)
	Overnight camping equipment (last included in 1971)
	Boats (last included in 1971)
<u>Dropped</u>	Tape-recorders (last included in 1973)
	Vacuum cleaners (last included in 1973)
	Electric sewing machines (last included in 1973)

II. Contents of the Tables

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8, 10, 11 and 24, for the provinces.

To facilitate the analysis of data on heating equipment, heating fuel and fuel for hot water supply, separate tables on these facilities have been published for single dwellings (single detached, double and row or terrace) and for total dwellings of all types (Tables 10-15, 17-18).

The table, "Age of Specified Household Equipment, Canada", (Table 24) is now published in this report rather than in the unpublished special tables available on request.

Tables on "Households with Radios, Showing Number with Telephones and T.V. Sets, by Province" and "Households with T.V. Sets, Showing Number with Telephones and Radios, by Province", have not been published in the 1974 report but are available on request.

III. Other Data Available

Following is a list of unpublished data which can be obtained upon request:

A. Canada, by Province

1. Households with radios, showing number with telephones and T.V. sets.

(1) See "Appendix".

I. Introduction

Les statistiques publiées ici sont tirées du plus récent sondage annuel sur l'équipement ménager. L'enquête a été effectuée en même temps que l'enquête sur la population active d'avril 1974, environ 30,000 ménages, choisis par sondage aréolaire dans 450 régions, ont été interrogés.

Le questionnaire utilisé en 1974(1) a subi plusieurs modifications. Les questions suivantes sont touchées:

<u>Additions</u>	Moteurs hors-bord (pris en compte pour la dernière fois en 1972)
	Polisseuses à parquets électriques (prises en compte pour la dernière fois en 1972)
	Souffleuses à neige (prises en compte pour la dernière fois en 1972)
	Tondeuses (prises en compte pour la dernière fois en 1972)
	Matériel de camping (pris en compte pour la dernière fois en 1971)
	Embarcations (prises en compte pour la dernière fois en 1971)
<u>Suppressions</u>	Magnétophones (pris en compte pour la dernière fois en 1973)
	Aspirateurs électriques (pris en compte pour la dernière fois en 1973)
	Machines à coudre électriques (prises en compte pour la dernière fois en 1973)

II. Contenu des tableaux

Les tableaux présentent des données pour l'ensemble du Canada et, exception faite des tableaux 1, 5, 6, 8, 10, 11 et 24, pour les provinces.

Afin de simplifier l'analyse des données sur les systèmes de chauffage, les combustibles de chauffage et les combustibles utilisés pour l'eau chaude, nous en avons publié des tableaux distincts pour les logements individuels (maisons individuelles non attenantes, doubles et de rangée ou de terrasse) et pour l'ensemble des genres de logements (tableaux 10 à 15, 17 et 18).

Le tableau intitulé "Âges de certains appareils ménagers, Canada", (tableau 24) fait maintenant partie du rapport plutôt que de la liste des tableaux spéciaux non publiés que l'on peut obtenir sur demande.

Les tableaux "Ménages équipés de radios, selon le nombre de téléphones et de téléviseurs, par province", et "Ménages équipés de téléviseurs, selon le nombre de téléphones et de radios, par province" ne font pas partie du rapport de 1974, mais on peut les obtenir sur demande.

III. Autres données disponibles

Les données suivantes sont disponibles sur demande:

A. Canada, par province

1. Ménages équipés de radios, selon le nombre de téléphones et de téléviseurs.

(1) Voir "Appendice".

2. Households with T.V. sets, showing number with telephones and radios.
- B. Canada, by urban-rural categories — percentage of households having certain facilities and equipment.
1. Principal heating equipment and fuel; fuel used for piped hot water supply.
 2. Water supply and plumbing facilities.
 3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
 4. Telephones, radios, T.V. sets (total, black and white, and colour) and record-playing equipment.
 5. Automobiles and automobile radios.
 6. Miscellaneous household equipment (1974 — air conditioners, automatic dishwashers, outboard motors, electric floor polishers, snow-blowers, lawn-mowers, overnight camping equipment, boats and vacation homes).
- C. Metropolitan Areas with 50,000 or more households — percentage of households having certain facilities and equipment.
1. Principal heating equipment and fuel; fuel used for piped hot water supply.
 2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
 3. Telephones, radios, T.V. sets (total, black and white, and colour) and record-playing equipment.
 4. Automobiles and automobile radios.
 5. Miscellaneous household equipment (1974 — air conditioners, automatic dishwashers, outboard motors, electric floor polishers, snow-blowers, lawn-mowers, overnight camping equipment, boats and vacation homes).

IV. Coverage

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V. Definitions

Dwelling — A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

Household — A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

Single detached dwelling — This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling — Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat — This type of dwelling includes:

2. Ménages équipés de téléviseurs, selon le nombre de téléphones et de radios.

B. Canada, par catégorie d'habitat — pourcentage des ménages disposant de certains éléments de confort.

1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude canalisée.
2. Eau courante et installations sanitaires.
3. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
4. Téléphones, radios, téléviseurs (nombre total, téléviseurs en noir et blanc et télécouleurs) et tourne-disques.
5. Automobiles et radios d'automobile.
6. Appareils ménagers divers (1974 — climatiseurs, lave-vaisselle automatiques, moteurs hors-bord, polisseuses à parquets électriques, souffleuses à neige, tondeuses, matériel de camping, embarcations et résidences secondaires).

C. Régions métropolitaines de 50,000 ménages et plus — pourcentage des ménages disposant de certains éléments de confort.

1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude canalisée.
2. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
3. Téléphones, radios, téléviseurs (nombre total, téléviseurs en noir et blanc et télécouleurs) et tourne-disques.
4. Automobiles et radios d'automobile.
5. Appareils ménagers divers (1974 — climatiseurs, lave-vaisselle automatiques, moteurs hors-bord, polisseuses à parquets électriques, souffleuses à neige, tondeuses, matériel de camping, embarcations et résidences secondaires).

IV. Champ de l'enquête

L'échantillon utilisé pour l'enquête est représentatif de tous les ménages au Canada, à quelques exceptions près. Sont exclus les ménages vivant au Yukon et dans les Territoires du Nord-Ouest, dans une réserve indienne, dans une institution, dans un camp militaire ou autre logement collectif comme les hôtels, les grandes pensions, les clubs, les camps de bûcherons et les baraquements de travailleurs; sont aussi exclus certains ménages privés vivant dans une remorque, une maison d'été, un bateau, etc.

V. Définitions

Logement — ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor ou un escalier commun à l'intérieur.

Ménage — personne ou groupe de personnes occupant un logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés.

Logement individuel non attenant — il s'agit ordinairement d'une maison individuelle, c.-à-d. d'une maison ne comprenant qu'un logement et non rattachée à un autre immeuble ou à une autre construction.

Logement individuel attenant — chaque moitié d'une maison jumelée (ou double) et chaque section d'une maison de rangée ou de terrasse.

Appartement ou plain-pied — ce genre de logement comprend:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

Rooms — In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms — Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI. Reliability of Estimates

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and interviewers. This difference is called the sampling error of the estimates. It is not the same for all estimates; of two estimates the larger one will likely have a smaller per cent sampling error (the sampling error expressed as a per cent of the estimate it refers to) and of two estimates of the same size the one referring to a characteristic more evenly distributed across the country will tend to have a smaller per cent sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than 50%. In the tables, estimates which are less than 4,000 are being replaced by dashes.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of interviewer and respondent variations. The principal elements of this nature are as follows:

1. The interviewer may misinterpret the concepts and definitions despite careful instruction.
2. The interviewer may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the interviewer.
4. There may be deliberate mis-statement by either interviewer or respondent.

- (i) les logements dans les maisons de rapport ou les hôtels résidentiels;
- (ii) les logements dans les duplex ou les triplex, c.-à-d. les immeubles où la division entre logements est horizontale;
- (iii) les logements dans des maisons transformées;
- (iv) les pièces d'habitation au-dessus ou à l'arrière d'un magasin, d'un restaurant, d'un garage ou d'un autre commerce;
- (v) les logements de concierge dans les écoles, les églises, les entrepôts, etc.; et
- (vi) les logements privés pour employés dans les hôpitaux et les institutions.

Pièces — Pour calculer le nombre de pièces d'un logement, on ne compte que les pièces servant ou pouvant servir à l'habitation, y compris les pièces occupées par les serviteurs, les pensionnaires ou les membres de familles en pension. Ne sont pas comptées comme pièces: les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptées que si elles sont complètement aménagées et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

Chambres à coucher — Sont des "chambres à coucher" toutes les pièces conçues, meublées et utilisées comme telles, même si elles ne servent que de temps à autre, (les chambres d'ami, par exemple). Les studios et autres pièces de séjour et de repos ne le sont pas. Dans les logements d'une seule pièce (par exemple, une garçonnière) et dans bien d'autres petits logements, il n'y a pas de chambre à coucher.

VI. Fiabilité des estimations

Les estimations présentées ici ont pour origine un échantillon de ménages et peuvent différer des chiffres qu'aurait donné un recensement exhaustif fait avec les mêmes questionnaires, les mêmes explications et les mêmes enquêteurs. Cette différence s'appelle l'erreur d'échantillonnage. L'erreur d'échantillonnage n'est pas la même pour toutes les estimations; de deux estimations, la plus forte comporte vraisemblablement la plus faible erreur d'échantillonnage (exprimée en pourcentage de l'estimation visée) et de deux estimations du même ordre, celle qui porte sur la caractéristique la plus uniformément répartie présente ordinairement le pourcentage le moins élevé de variabilité due à l'échantillonnage. La variabilité d'échantillonnage est nettement au-dessus de 50 % pour une estimation de moins de 4,000. Dans les tableaux, les estimations inférieures à 4,000 sont remplacées par des traits.

Outre cette variabilité d'échantillonnage, d'autres facteurs font que les chiffres recueillis par sondage ou par recensement diffèrent des chiffres réels; il s'agit des erreurs attribuables aux enquêteurs et aux enquêtés:

1. L'enquêteur peut mal interpréter les concepts et les définitions en dépit d'une préparation soignée.
2. L'enquêteur peut accidentellement formuler ses questions de façon à influencer les réponses de l'enquêté.
3. L'enquêté peut accidentellement formuler ses réponses de façon à influencer les questions de l'enquêteur.
4. L'enquêteur ou l'enquêté peut délibérément donner une indication erronée.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

The sampling error, as described above, is not known. A quantity, called the standard deviation, can however be estimated from sample data itself. The standard deviation of an estimate is a statistical measure of its sampling error. It also partially measures the effect of non-sampling errors, but does not reflect any systematic biases in the data. The chances are about 68 out of 100 that the difference between a sample estimate and the corresponding census figure would be less than the standard deviation. The chances are about 95 out of 100 that the difference would be less than twice the standard deviation and about 99 out of 100 that it would be less than 2 1/2 times as large. Standard deviations of estimates are being calculated for this report and will be available on request in the near future.

The sample data are weighted up to estimates of total households derived from the Censuses of Canada. The projections of total households used for weighting the surveys from 1962 to 1967 were based on the 1961 Census and the survey estimates from 1968 to 1971 were taken from the 1966 Census. The projections of total households used for weighting the 1972 and subsequent surveys were based on the 1971 Census counts.

To provide greater comparability, estimates derived from the 1971 survey have been revised to the 1971 Census base. Similarly, to reflect revisions in the original projections of total households, adjustments have been made in the estimates derived from surveys taken in the intercensal years 1967-1970. The revised estimates for all or individual tables and for all five years or particular years are available on request.

L'erreur non due à l'échantillonnage est aussi répandue dans un dénombrement exhaustif que dans un échantillon et peut même, dans certains cas, dépasser l'erreur d'échantillonnage.

L'erreur d'échantillonnage, décrite ci-dessus n'est pas connue. Toutefois, il est possible d'estimer une quantité, appelée écart type, à partir des données mêmes du sondage. L'écart type d'une estimation est une mesure statistique de son erreur d'échantillonnage. Il mesure aussi partiellement l'effet des erreurs non dues à l'échantillonnage, mais ne reflète pas les biais systématiques. Il y a une probabilité de 68 % que la différence entre une estimation fondée sur un échantillon et le chiffre réel correspondant soit inférieure à l'écart type. Il y a une probabilité de 95 % que la différence soit moins de deux fois l'écart type et d'environ 99 % qu'elle soit moins de deux fois et demi l'écart type. On est en train de calculer l'écart type des estimations présentées ici et on pourra se les procurer sur demande très bientôt.

Les données fragmentaires sont pondérées en fonction des estimations du nombre total de ménages déduites des recensements du Canada. Les projections du nombre total de ménages qui ont servi à pondérer les enquêtes de 1962 à 1967 prenaient comme point de départ le recensement de 1961, alors que les enquêtes menées de 1968 à 1971 étaient pondérées en fonction du recensement de 1966. Les projections du nombre total de ménages utilisées pour pondérer les résultats depuis 1972 étaient fondées sur le recensement de 1971.

Pour assurer une meilleure comparabilité, les estimations déduites de l'enquête de 1971 ont été révisées en fonction du recensement de 1971. De même, en vue de tenir compte des révisions apportées aux premières projections du nombre total des ménages, les estimations déduites des enquêtes effectuées au cours des années intercensitaires 1967-1970 ont été révisées. On peut se procurer sur demande les estimations révisées pour chaque tableau ou l'ensemble des tableaux pour chacune ou l'ensemble des cinq années.

HOUSEHOLD FACILITIES & EQUIPMENT SURVEY, 1974 COMPLETE ONE SCHEDULE FOR EACH HOUSEHOLD

7 DOES THIS HOUSEHOLD LIVE ON A FARM?

Yes ☐ No ☐

8 TYPE OF DWELLING

Single detached ☐
Double ☐
Row or Terrace ☐
Duplex ☐
Apt. flat ☐
Institution ☐
Hotel or large lodging house ☐
Camp - logging, construction, etc. ☐
Other (describe in comments) ☐

9 DATE BUILDING ORIGINALLY CONSTRUCTED

Before 1940 ☐
1940-1949 ☐
1950-1959 ☐
1960-1964 ☐
1965-1969 ☐
1970 ☐
1971 ☐
1972 ☐
1973 ☐
1974 ☐
Other (describe in comments) ☐

10 IS THIS DWELLING OWNED OR RENTED?

Owned ☐
Rented for cash ☐
Other (describe in comments) ☐

11 GARAGE FACILITIES

Yes ☐ No ☐

12 AGE OF HEAD OF HOUSEHOLD	13 NUMBER OF PERSONS IN THE HOUSEHOLD (EXCLUDE PERSONS UNDER 14 YRS.)	14 NUMBER OF ROOMS IN THIS DWELLING
14-19 <input type="checkbox"/>	0 <input type="checkbox"/>	Total rooms <input type="checkbox"/>
20-24 <input type="checkbox"/>	1 <input type="checkbox"/>	Bed rooms <input type="checkbox"/>
25-34 <input type="checkbox"/>	2 <input type="checkbox"/>	
35-44 <input type="checkbox"/>	3 <input type="checkbox"/>	
45-54 <input type="checkbox"/>	4 <input type="checkbox"/>	
55-64 <input type="checkbox"/>	5 <input type="checkbox"/>	
65-69 <input type="checkbox"/>	6 <input type="checkbox"/>	
70 or over <input type="checkbox"/>	7 <input type="checkbox"/>	
	8 <input type="checkbox"/>	
	9 <input type="checkbox"/>	

15 PRINCIPAL HEATING EQUIPMENT

Steam or hot water furnace ☐
Forced hot air furnace ☐
Other hot air furnace ☐
Heating stove (include oil space heater) ☐
Electricity ☐
Cook stove or range ☐
Other (describe in comments) ☐

16 DATE HEATING EQUIPMENT INSTALLED

In last 5 years ☐
6 to 10 years ago ☐
Over 10 years ago ☐
Other (describe in comments) ☐

17 FUEL FOR HEATING EQUIPMENT

Oil or other liquid fuel ☐
Piped gas ☐
Bottled gas ☐
Electricity ☐
Coal or coke ☐
Wood ☐
Other (describe in comments) ☐

18 SOURCE OF WATER SUPPLY

Community water main system ☐
Private source on property ☐
Other (describe in comments) ☐

19 TYPE OF WATER SUPPLY

Hot and cold water piped inside ☐
Cold water only piped inside (skip to question 21) ☐
No piped running water inside this dwelling (skip to question 21) ☐

20 FUEL FOR PIPED HOT WATER SUPPLY

Oil or other liquid fuel ☐
Piped gas ☐
Bottled gas ☐
Electricity ☐
Coal or coke ☐
Wood ☐
Other (describe in comments) ☐

21 INSTALLED BATHTUB OR SHOWER

In one bathroom (exclusive use) ☐
In two or more bathrooms (exclusive use) ☐
Bath facilities shared with another household ☐
No installed bathtub or shower ☐

22 TOILET FACILITIES

One flush toilet ☐
Two flush toilets ☐
Three or more flush toilets ☐
Chemical toilet ☐
No flush or chemical toilet ☐
Oil or other liquid fuel ☐
Piped gas ☐
Bottled gas ☐
Electricity ☐
Coal or coke ☐
Wood ☐
Other (describe in comments) ☐
None (skip to question 25) ☐

23 FUEL FOR PRINCIPAL COOKING EQUIPMENT

Oil or other liquid fuel ☐
Piped gas ☐
Bottled gas ☐
Electricity ☐
Coal or coke ☐
Wood ☐
Other (describe in comments) ☐
None (skip to question 25) ☐

24 DATE COOKING EQUIPMENT MANUFACTURED

In last 5 years ☐
6 to 10 years ago ☐
Over 10 years ago ☐
Other (describe in comments) ☐
None (skip to question 27) ☐

25 REFRIGERATOR

Electric refrigerator ☐
Other (describe in comments) ☐
No electrical or mechanical refrigerator (skip to question 27) ☐

26 DATE REFRIGERATOR MANUFACTURED

In last 5 years ☐
6 to 10 years ago ☐
Over 10 years ago ☐
Other (describe in comments) ☐
None (skip to question 27) ☐

27 HOME FREEZER

Yes ☐ No ☐

28 WASHING MACHINE

Combination automatic washer-dryer (combined as a single unit) ☐
Separate automatic washer ☐
Electric wringer-washer ☐
Other electric washer ☐
None (skip to question 30) ☐

29 DATE WASHING MACH. MANUFACTURED

In last 5 years ☐
6 to 10 years ago ☐
Over 10 years ago ☐
Other (describe in comments) ☐
None (skip to question 30) ☐

30 CLOTHES DRYER, SEPARATE FROM WASHER

Electric ☐
Gas ☐
None ☐

31 AUTOMATIC DISHWASHER

Yes ☐ No ☐

32 TOTAL NUMBER OF TELEPHONES INCLUDING EXTENSIONS

One ☐
Two ☐
Three or more ☐
None (skip to question 43) ☐

41 NUMBER OF CARS OR TRUCKS WITH RADIOS

One ☐
Two ☐
Three or more ☐
None ☐

33 COMBINATION RADIO-RECORD PLAYER

Yes ☐ No ☐

34 RECORD PLAYER WITHOUT RADIO

Yes ☐ No ☐

35 TOTAL NUMBER OF CARS OR TRUCKS EXCLUDING CAR RADIOS

One ☐
Two ☐
Three ☐
Four or more ☐
None ☐

44 OUTBOARD MOTORS

Two ☐
One ☐
None ☐

45 NUMBER OF ADULT-SIZE BICYCLES

Two ☐
One ☐
None ☐

36 ARE ANY OF THESE RADIOS FM RECEIVERS?

Yes ☐ No ☐

37 ARE ANY OF THESE SMALL PORTABLE BATTERY OPERATED OR TRANSISTOR RADIOS?

Yes ☐ No ☐

38 TOTAL NUMBER OF BLACK AND WHITE T.V. SETS

One ☐
Two or more ☐
None ☐

39 TOTAL NUMBER OF COLOUR T.V. SETS

One ☐
Two or more ☐
None ☐

40 NUMBER OF AUTOMOBILES OWNED BY HOUSEHOLD MEMBERS

One ☐
Two ☐
Three or more ☐
None (skip to question 43) ☐

41 NUMBER OF CARS OR TRUCKS WITH RADIOS

One ☐
Two ☐
Three or more ☐
None ☐

33 COMBINATION RADIO-RECORD PLAYER

Yes ☐ No ☐

34 RECORD PLAYER WITHOUT RADIO

Yes ☐ No ☐

35 TOTAL NUMBER OF CARS OR TRUCKS EXCLUDING CAR RADIOS

One ☐
Two ☐
Three ☐
Four or more ☐
None ☐

44 OUTBOARD MOTORS

Two ☐
One ☐
None ☐

45 NUMBER OF ADULT-SIZE BICYCLES

Two ☐
One ☐
None ☐

36 ARE ANY OF THESE RADIOS FM RECEIVERS?

Yes ☐ No ☐

37 ARE ANY OF THESE SMALL PORTABLE BATTERY OPERATED OR TRANSISTOR RADIOS?

Yes ☐ No ☐

38 TOTAL NUMBER OF BLACK AND WHITE T.V. SETS

One ☐
Two or more ☐
None ☐

39 TOTAL NUMBER OF COLOUR T.V. SETS

One ☐
Two or more ☐
None ☐

31 AUTOMATIC DISHWASHER

Yes ☐ No ☐

32 TOTAL NUMBER OF TELEPHONES INCLUDING EXTENSIONS

One ☐
Two ☐
Three or more ☐
None (skip to question 43) ☐

41 NUMBER OF CARS OR TRUCKS WITH RADIOS

One ☐
Two ☐
Three or more ☐
None ☐

33 COMBINATION RADIO-RECORD PLAYER

Yes ☐ No ☐

34 RECORD PLAYER WITHOUT RADIO

Yes ☐ No ☐

35 TOTAL NUMBER OF CARS OR TRUCKS EXCLUDING CAR RADIOS

One ☐
Two ☐
Three ☐
Four or more ☐
None ☐

44 OUTBOARD MOTORS

Two ☐
One ☐
None ☐

45 NUMBER OF ADULT-SIZE BICYCLES

Two ☐
One ☐
None ☐

36 ARE ANY OF THESE RADIOS FM RECEIVERS?

Yes ☐ No ☐

37 ARE ANY OF THESE SMALL PORTABLE BATTERY OPERATED OR TRANSISTOR RADIOS?

Yes ☐ No ☐

38 TOTAL NUMBER OF BLACK AND WHITE T.V. SETS

One ☐
Two or more ☐
None ☐

39 TOTAL NUMBER OF COLOUR T.V. SETS

One ☐
Two or more ☐
None ☐

1. NAME

2. LINE NUMBER OF HEAD OF HOUSEHOLD

3. Primary Sampling Unit

4. Segment Number

5. Listing Number

FOR OFFICE USE ONLY

46 AIR CONDITIONER

Window Type ☐
Central Unit ☐
None ☐

47 FLOOR POLISHER

Yes ☐ No ☐

48 SNOW BLOWER

Yes ☐ No ☐

49 LAWN MOWER

Gasoline ☐
Electric ☐
Hand mower ☐
None ☐

50 DOES ANY MEMBER OF THE HOUSEHOLD OWN A VACATION HOME?

Yes ☐ No ☐

51 OVERNIGHT CAMPING EQUIPMENT

Tent ☐
Trailer ☐
Travel Trailer ☐
Truck Camper ☐
None ☐

52 BOATS

Canoe ☐
Sailboat ☐
Rowboat ☐
Skiff dory, etc. ☐
Outboard motor boat ☐
Other (describe in comments) ☐
None ☐

COMMENTS

ENQUÊTE SUR L'ÉQUIPEMENT DES MÉNAGES, PRINTEMPS, 1974. REMPLIR UN QUESTIONNAIRE POUR CHAQUE MÉNAGE

7 LE MÉNAGE VIT-IL DANS UNE FERME?		15 PRINCIPAL MODE DE CHAUFFAGE		22 TOILETTES		31 LAVE-VAISSELLE AUTO.		40 NOMBRE D'APPAREILS ÉLECTRIQUES A DES MEMBRES DU MÉNAGE		46 APPAREIL DE CLIMATISATION D'AIR		51 MATÉRIEL DE CAMPING		52 EMBARCATIONS		53 REMARQUES GÉNÉRALES

Questionnaire de l'enquête	31
----------------------------------	----

I. Introduction

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the April 1975 Labour Force Survey; about 30,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

Several changes were made in the content of the 1975 questionnaire.(1) Below is a list of the affected questions:

Added Tape-recorders (last included in 1973)

Vacuum cleaners (last included in 1973)

Electric sewing machines (last included in 1973)

Portable humidifiers (last included in 1972)

Motorcycles (new item in 1975)

Cable television (new item in 1975)

Microwave ovens (new item in 1975)

Dropped Outboard motors (last included in 1974)

Electric floor polishers (last included in 1974)

Snow-blowers (last included in 1974)

Lawn-mowers (last included in 1974)

Vacation homes (last included in 1974)

Overnight camping equipment (last included in 1974)

Boats (last included in 1974)

II. Contents of the Tables

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8, 10, 11 and 24, for the provinces.

To facilitate the analysis of data on heating equipment, heating fuel and fuel for hot water supply, separate tables on these facilities have been published for single dwellings (single detached, double and row or terrace) and for total dwellings of all types (Tables 10-15, 17-18).

Included in the tables are alphabetic symbols of standard deviation to indicate the reliability of the estimates. For a more detailed discussion on sampling error see Section VI "Reliability of Estimates".

(1) See "Appendix".

Les statistiques publiées ici sont tirées du plus récent sondage annuel sur l'équipement ménager. L'enquête a été effectuée en même temps que l'enquête sur la population active d'avril 1975. Environ 30,000 ménages, choisis par sondage aréolaire dans 450 régions, ont été interrogés.

Le questionnaire utilisé en 1975(1) a été quelque peu modifié. Les questions suivantes ont été changées:

Additions Magnétophones (pris en compte pour la dernière fois en 1973)

Aspirateurs électriques (pris en compte pour la dernière fois en 1973)

Machines à coudre électriques (prises en compte pour la dernière fois en 1973)

Humidificateurs portatifs (pris en compte pour la dernière fois en 1972)

Motocyclettes (prises en compte pour la première fois en 1975)

Télédistribution (prise en compte pour la première fois en 1975)

Fours à micro-ondes (pris en compte pour la première fois en 1975)

Suppressions Moteurs hors-bord (pris en compte pour la dernière fois en 1974)

Cireuses électriques (prises en compte pour la dernière fois en 1974)

Souffleuses à neige (prises en compte pour la dernière fois en 1974)

Tondeuses à gazon (prises en compte pour la dernière fois en 1974)

Résidences secondaires (prises en compte pour la dernière fois en 1974)

Matériel de camping (pris en compte pour la dernière fois en 1974)

Embarcations (prises en compte pour la dernière fois en 1974)

II. Contenu des tableaux

Les tableaux présentent des données pour l'ensemble du Canada et, exception faite des tableaux 1, 5, 6, 8, 10, 11, et 24, pour les provinces.

Afin de simplifier l'analyse des données sur les systèmes de chauffage, les combustibles de chauffage et les combustibles utilisés pour chauffer l'eau, des tableaux distincts ont été publiés pour les logements individuels (maisons individuelles non attenantes, maisons doubles et en rangées ou de terrasses) et pour l'ensemble des logements de tous types (tableaux 10-15, 17-18).

On trouvera dans les tableaux des symboles alphabétiques d'écarts-types indiquant la fiabilité des estimations. Les erreurs d'échantillonnage sont examinées à la section VI "Fiabilité des estimations".

(1) Voir l'"appendice".

III. Other Data Available

Following is a list of unpublished data which can be obtained upon request:

A. Canada, by Province

1. Households with radios, showing number with telephones and TV sets.
2. Households with TV sets, showing number with telephones and radios.
3. Average number of persons per household, rooms per household and persons per room.
4. Households showing the period of construction of the dwelling.

B. Canada, by Urban-rural Categories - Percentage of Households Having Certain Facilities and Equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, TV sets (total, black and white, and colour) and record-playing equipment.
5. Automobiles and automobile radios.
6. Miscellaneous household equipment (1975 - air conditioners, automatic dishwashers, sewing machines, vacuum cleaners, tape-recorders, bicycles, snowmobiles, portable humidifiers, cable television, motorcycles, microwave ovens).

C. Metropolitan Areas with 50,000 or more Households - Percentage of Households Having Certain Facilities and Equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, TV sets (total, black and white, and colour) and record-playing equipment.
4. Automobiles and automobile radios.
5. Miscellaneous household equipment (1975 - air conditioners, automatic dishwashers, sewing machines, vacuum cleaners, tape-recorders, bicycles, snowmobiles, motorcycles, cable television).

IV. Coverage

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

III. Autres données disponibles

Les données suivantes ne sont pas publiées mais sont disponibles sur demande:

A. Canada, par province

1. Ménages équipés de radios, avec indication du nombre de téléphones et de téléviseurs.
2. Ménages équipés de téléviseurs, avec indication du nombre de téléphones et de radios.
3. Nombre moyen de personnes par ménage, nombre de pièces par ménage et nombre de personnes par pièce.
4. Ménages, avec indication de l'époque de construction du logement.

B. Canada, par catégorie urbaines-rurales - Pourcentage de ménages disposant de certains éléments de confort

1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude courante.
2. Eau courante et installations sanitaires.
3. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sécheuses électriques).
4. Téléphones, radios, téléviseurs (nombre total: téléviseur en noir et blanc et télécouleurs) et tourne-disques.
5. Automobiles et radios d'automobile.
6. Appareils ménagers divers (1975 - climatiseurs, lave-vaisselle automatiques, machines à coudre, aspirateurs, magnétophones, bicyclettes, motoneiges, humidificateurs portatifs, télédistribution, motocyclettes, fours à micro-ondes).

C. Régions métropolitaines comprenant 50,000 ménages et plus - Pourcentage de ménages disposant de certains éléments de confort

1. Principal système et combustible de chauffage; combustible utilisé pour l'eau chaude courante.
2. Appareils ménagers (appareils de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sécheuses électriques).
3. Téléphones, radios, téléviseurs (nombre total, téléviseurs en noir et blanc et télécouleurs) et tourne-disques.
4. Automobiles et radios d'automobile.
5. Appareils ménagers divers (1975 - climatiseurs, lave-vaisselle automatiques, machines à coudre électriques, aspirateurs électriques, magnétophones, bicyclettes, motoneiges, motocyclettes, télédistribution).

IV. Champ de l'enquête

L'échantillon utilisé pour l'enquête est représentatif de tous les ménages au Canada, à quelques exceptions près. Sont exclus les ménages vivant au Yukon et dans les Territoires du Nord-Ouest, dans une réserve indienne, dans une institution, dans un camp militaire ou autre logement collectif comme les hôtels, les grandes pensions, les clubs, les camps de bûcherons et les baraquements de travailleurs; sont aussi exclus certains ménages privés vivant dans une remorque, une maison d'été, un bateau, etc.

V. Definitions

Dwelling - A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

Household - A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

Single detached dwelling - This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling - Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat - This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

Rooms - In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms - Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI. Reliability of Estimates

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and interviewers. This difference is called the sampling error of the estimates. It is not the same for all estimates; of two estimates the larger one will likely have a smaller per cent sampling error (the sampling error expressed as a per cent of the estimate it refers to) and of two estimates of the same size the one referring to a

V. Définitions

Logement - Ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor ou un escalier commun à l'intérieur.

Ménage - Personne ou groupe de personnes occupant un logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés.

Logement individuel non attenant - Il s'agit ordinairement d'une maison individuelle, c.-à-d. d'une maison ne comprenant qu'un logement et non rattachée à un autre immeuble ou à une autre construction.

Logement individuel attenant - Chaque moitié d'une maison jumelée (ou double) et chaque section d'une maison en rangée ou de terrasse.

Appartement ou plain-pied - Ce genre de logement comprend:

- (i) les logements dans les maisons de rapport ou les hôtels résidentiels;
- (ii) les logements dans les duplex ou les triplex, c.-à-d. les immeubles où la division entre logements est horizontale;
- (iii) les logements dans des maisons transformées;
- (iv) les pièces d'habitation au dessus ou à l'arrière d'un magasin, d'un restaurant, d'un garage ou d'un autre commerce;
- (v) les logements de concierge dans les écoles, les églises, les entrepôts, etc.; et
- (vi) les logements privés pour employés dans les hôpitaux et les institutions.

Pièces - Pour calculer le nombre de pièces d'un logement, on ne compte que les pièces servant ou pouvant servir à l'habitation, y compris les pièces occupées par les serviteurs, les pensionnaires ou les membres de familles en pension. Ne sont pas comptées comme pièces: les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptées que si elles sont complètement aménagées et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

Chambres à coucher - Sont des "chambres à coucher" toutes les pièces conçues; meublées et utilisées comme telles, même si elles ne servent que de temps à autre (les chambres d'ami, par exemple). Les studios et autres pièces de séjour et de repos ne le sont pas. Dans les logements d'une seule pièce (par exemple, une garçonnnière) et dans bien d'autres petits logements, il n'y a pas de chambre à coucher.

VI. Fiabilité des estimations

Les estimations présentées ici ont pour origine un échantillon de ménages et peuvent différer des chiffres qu'aurait donné un recensement exhaustif fait avec les mêmes questionnaires, les mêmes explications et les mêmes enquêteurs. Cette différence s'appelle l'erreur d'échantillonnage. L'erreur d'échantillonnage n'est pas la même pour toutes les estimations; de deux estimations, la plus forte comporte vraisemblablement la plus faible erreur d'échantillonnage (exprimée en pourcentage de l'estimation visée) et de deux estimations du même ordre, celle qui porte sur la caractéristique la

characteristic more evenly distributed across the country will tend to have a smaller per cent sampling variability. Data based on very small samples are not published and are indicated in the tables by (...).

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of interviewer and respondent variations. The principal elements of this nature are as follows:

1. The interviewer may misinterpret the concepts and definitions despite careful instruction.
2. The interviewer may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the interviewer.
4. There may be deliberate mis-statement by either interviewer or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

The sampling error, as described above, is not known. A quantity, called the standard deviation, can however be estimated from sample data itself. The standard deviation of an estimate is a statistical measure of its sampling error. It also partially measures the effect of non-sampling errors, but does not reflect any systematic biases in the data. The chances are about 68 out of 100 that the difference between a sample estimate and the corresponding census figure would be less than the standard deviation. The chances are about 95 out of 100 that the difference would be less than twice the standard deviation and about 99 out of 100 that it would be less than 2 1/2 times as large.

Alphabetic symbols of standard deviation are used in this publication to give an indication of the reliability of the estimates. The letter "A" indicates that the estimate is very reliable; the letter "B" indicates that the data is reliable but to a somewhat lesser degree than the "A" category; and so on. Generally, published estimates are in the categories "A" to "G" and should be considered reliable enough for most purposes. Data with a higher variability (in the "H" category) are not published and are indicated in the tables by (--).

The table below shows the alphabetic categories in terms of their per cent standard deviations. For example, a letter "B" beside an estimate indicates that one standard deviation is in the range 0.6 to 1.0% of the estimate.

plus uniformément répartie présente ordinairement le pourcentage le moins élevé de variabilité due à l'échantillonnage. Les données basées sur de très petits échantillons ne sont pas publiées et sont indiquées par (...) dans les tableaux.

Outre cette variabilité d'échantillonnage, d'autres facteurs font que les chiffres recueillis par sondage ou par recensement diffèrent des chiffres réels; il s'agit des erreurs attribuables aux enquêteurs et aux enquêtés:

1. L'enquêteur peut mal interpréter les concepts et les définitions en dépit d'une préparation soignée.
2. L'enquêteur peut accidentellement formuler ses questions de façon à influencer les réponses de l'enquêté.
3. L'enquêté peut accidentellement formuler ses réponses de façon à influencer les questions de l'enquêteur.
4. L'enquêteur ou l'enquêté peut délibérément donner une indication erronée.

L'erreur non due à l'échantillonnage est aussi répandue dans un dénombrement exhaustif que dans un échantillon et peut même, dans certains cas, dépasser l'erreur d'échantillonnage.

L'erreur d'échantillonnage décrite ci-dessus n'est pas connue. Toutefois, il est possible d'estimer une quantité, appelée écart-type, à partir des données mêmes du sondage. L'écart-type d'une estimation est une mesure statistique de son erreur d'échantillonnage. Il mesure aussi partiellement l'effet des erreurs non dues à l'échantillonnage, mais ne reflète pas les biais systématiques. Il y a une probabilité de 68 % que la différence entre une estimation fondée sur un échantillon et le chiffre réel correspondant soit inférieure à l'écart-type. Il y a une probabilité de 95 % que la différence soit moins de deux fois l'écart-type et d'environ 99 % qu'elle soit moins de deux fois et demie l'écart-type.

Dans cette publication, on utilise des indicateurs littéraux de l'écart-type pour illustrer la fiabilité des estimations. La lettre "A" indique une estimation très fiable; la lettre "B" signifie qu'il s'agit de données fiables, mais moins que celles de la catégorie "A"; et ainsi de suite. D'une façon générale, les estimations publiées sont classées dans les catégories de "A" à "G" et on devrait les considérer comme étant suffisamment fiables pour être utilisables. Les données dont la variabilité est plus grande (catégorie "H") ne sont pas publiées et sont indiquées dans les tableaux par (--).

Le tableau ci-dessous indique les catégories alphabétiques correspondant aux pourcentages des écarts-types. Ainsi, lorsqu'une estimation est suivie de la lettre "B", cela signifie que l'écart-type se situe entre 0.6 % et 1.0 % de l'estimation.

Alphabetic Designation of Per Cent Standard Deviation

Désignation littérale de l'écart-type exprimé en pourcentage

Alphabetic indicator — Indicateur littéral	Per cent of estimates at one standard deviation — Pourcentage de l'estimation correspondant à un écart-type
A	0.0 - 0.5
B	0.6 - 1.0
C	1.1 - 2.5
D	2.6 - 5.0
E	5.1 - 10.0
F	10.1 - 16.5
G	16.6 - 25.0
H	25.1 +

The sample data are weighted up to estimates of total households derived from the Censuses of Canada. The projections of total households used for weighting the surveys from 1962 to 1967 were based on the 1961 Census and the survey estimates from 1968 to 1971 were taken from the 1966 Census. The projections of total households used for weighting the 1972 and subsequent surveys were based on the 1971 Census counts.

To provide greater comparability, estimates derived from the 1971 survey have been revised to the 1971 Census base. Similarly, to reflect revisions in the original projections of total households, adjustments have been made in the estimates derived from surveys taken in the intercensal years 1967-1970. The revised estimates for all or individual tables and for all five years or particular years are available on request.

Les données fragmentaires sont pondérées en fonction des estimations du nombre total de ménages déduites des recensements du Canada. Les projections du nombre total de ménages qui ont servi à pondérer les enquêtes de 1962 à 1967 prenaient comme point de départ le recensement de 1961, alors que les enquêtes menées de 1968 à 1971 étaient pondérées en fonction du recensement de 1966. Les projections du nombre total de ménages utilisées pour pondérer les résultats depuis 1972 étaient fondées sur le recensement de 1971.

Pour assurer une meilleure comparabilité, les estimations déduites de l'enquête de 1971 ont été révisées en fonction du recensement de 1971. De même, en vue de tenir compte des révisions apportées aux premières projections du nombre total des ménages, les estimations déduites des enquêtes effectuées au cours des années intercensitaires 1967-1970 ont été révisées. On peut se procurer sur demande les estimations révisées pour chaque tableau ou l'ensemble des tableaux pour chacune ou l'ensemble des cinq années.

I. INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1976 Labour Force Survey; about 36,000 households were included in the sample. It should be noted that in 1973, 1974 and 1975 the survey was conducted one month earlier in April.

Beginning in January 1976, substantial changes were made to the Labour Force Survey. The effects of these changes on the Household Facilities and Equipment Survey are:

- (i) field collection procedures were altered such that approximately 60% of the interviews were conducted over the telephone and the remaining 40% by personal interview. Interviewing by telephone had been introduced in 1974 on a limited basis and was gradually increased to its present level;
- (ii) metropolitan areas have been redefined to reflect boundary changes introduced in the 1971 Census. This may slightly affect the historical comparability of the C-series special tables;
- (iii) information on tenure is now available for "owned" and "rented" categories only. The present "rented" category is equivalent to the "rented for cash" and "rented - other" groups used in earlier publications.

Several changes were made in the content of the 1976 questionnaire.(1) Below is a list of the affected questions:

Added: Electric floor polishers (last included in 1974)

Snow-blowers (last included in 1974)

Lawn-mowers (last included in 1974)

Vacation homes (last included in 1974)

Overnight camping equipment (last included in 1974)

Boats (last included in 1974)

Snow skis (new item in 1976).

Dropped: Tape-recorders

Vacuum cleaners

Electric sewing machines

Portable humidifiers

Motorcycles

Cable television

Microwave ovens.

(1) See "Appendix".

Les statistiques publiées ici sont tirées de la dernière enquête par sondage annuelle sur l'équipement ménager. L'enquête a été effectuée en même temps que l'Enquête sur la population active de mai 1976; environ 36,000 ménages ont été interrogés. Il convient de remarquer qu'en 1973, 1974 et 1975 l'enquête avait eu lieu un mois plus tôt, c.-à-d., en avril.

Depuis janvier 1976, on a apporté d'importantes modifications à l'Enquête sur la population active. Voici les effets que ces modifications ont eu sur l'Enquête sur l'équipement ménager:

- (i) les méthodes de collecte sur le terrain ont été modifiées de sorte qu'environ 60 % des interviews ont été effectuées par téléphone et les 40 % restants, sur place. On a fait des interviews téléphoniques pour la première fois en 1974 sur une base restreinte; on en a mené de plus en plus depuis;
- (ii) les régions métropolitaines ont été délimitées à nouveau en fonction des nouvelles limites établies pour le recensement de 1971. Cela pourrait influencer légèrement sur la comparabilité chronologique des tableaux spéciaux de la série C;
- (iii) les renseignements sur le mode d'occupation se rapportent désormais à deux catégories de logements seulement: les logements possédés et les logements loués. L'actuelle catégorie "loué" correspond aux catégories "loué pour de l'argent" et "loué - autre" utilisées dans les publications antérieures.

Le questionnaire de 1976(1) a été quelque peu modifié. Les questions suivantes sont touchées:

Additions: Cireuses électriques (prises en compte pour la dernière fois en 1974)

Souffleuses à neige (prises en compte pour la dernière fois en 1974)

Tondeuses (prises en compte pour la dernière fois en 1974)

Maisons de villégiature (prises en compte pour la dernière fois en 1974)

Matériel de camping (pris en compte pour la dernière fois en 1974)

Embarcations (prises en compte pour la dernière fois en 1974)

Skis de neige (nouveau poste en 1976).

Suppressions: Magnétophones

Aspirateurs

Machines à coudre électriques

Humidificateurs portatifs

Motocyclettes

Télédistribution

Fours à micro-ondes.

(1) Voir l'Appendice.

II. CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8, 10, 11 and 24, for the provinces.

To facilitate the analysis of data on heating equipment, heating fuel and fuel for hot water supply, separate tables on these facilities have been published for single dwellings (single detached, double and row or terrace) and for total dwellings of all types (Tables 10-15, 17-18).

Included in the tables are alphabetic indicators of standard deviation to indicate the reliability of the estimates. For a more detailed discussion on sampling error see Section VI "Reliability of Estimates".

III. OTHER DATA AVAILABLE

Following is a list of unpublished data which can be obtained upon request:

A. Canada, by Province

1. Households with radios, showing number with telephones and TV sets.
2. Households with TV sets, showing number with telephones and radios.
3. Average number of persons per household, rooms per household and persons per room.
4. Households showing the period of construction of the dwelling.

B. Canada, by Urban-rural Categories - Percentage of Households Having Certain Facilities and Equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, record-playing equipment and TV sets (total, black and white, and colour).
5. Automobiles and automobile radios.
6. Miscellaneous household equipment (1976 - air conditioners, floor polishers, snow skis, lawnmowers, adult-size bicycles, snowmobiles, snowblowers, overnight camping equipment, boats) and vacation homes.

C. Metropolitan Areas with 50,000 or more Households - Percentage of Households Having Certain Facilities and Equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, TV sets (total, colour and black and white) and record-playing equipment.
4. Automobiles and automobile radios.

II. CONTENU DES TABLEAUX

Les tableaux présentent des données pour l'ensemble du Canada et, exception faite des tableaux 1, 5, 6, 8, 10, 11 et 24, pour les provinces.

Afin de simplifier l'analyse des données sur les systèmes de chauffage, les combustibles de chauffage et les combustibles utilisés pour chauffer l'eau, des tableaux distincts ont été publiés pour les logements individuels (maisons individuelles non attenantes, maisons doubles et en rangée ou de terrasse) et pour l'ensemble des logements de tous types (tableaux 10-15, 17-18).

On trouvera dans les tableaux des indicateurs littéraux de l'écart-type indiquant la fiabilité des estimations. Les erreurs d'échantillonnage sont examinées à la section VI "Fiabilité des estimations".

III. AUTRES DONNÉES DISPONIBLES

Les données suivantes ne sont pas publiées, mais on peut les obtenir sur demande:

A. Canada, par province

1. Ménages équipés de radios, indiquant le nombre de ménages ayant des téléphones et des téléviseurs.
2. Ménages équipés de téléviseurs, indiquant le nombre de ménages ayant des téléphones et des radios.
3. Nombre moyen de personnes par ménage, nombre de pièces par ménage et nombre de personnes par pièce.
4. Ménages, indiquant la date de construction du logement.

B. Canada, par catégorie urbaine-rurale - Pourcentage de ménages disposant de certains éléments de confort

1. Principal système de chauffage et combustible de chauffage; combustible utilisé pour l'eau chaude courante.
2. Eau courante et installations sanitaires.
3. Appareils ménagers (installations de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
4. Téléphones, radios, tourne-disques et téléviseurs (nombre total, téléviseurs en noir et blanc et télécouleurs).
5. Automobiles et radios d'automobile.
6. Appareils ménagers divers (1976 - appareils de climatisation d'air, cireuses, skis de neige, tondeuses, bicyclettes de grandeur pour adultes, motoneiges, souffleuses à neige, matériel de camping, embarcations) et maisons de villégiature.

C. Régions métropolitaines comprenant 50,000 ménages et plus - Pourcentage de ménages disposant de certains éléments de confort

1. Principal système de chauffage et combustible de chauffage; combustible utilisé pour l'eau chaude courante.
2. Appareils ménagers (installations de cuisson, réfrigérateurs électriques, congélateurs domestiques, machines à laver électriques, sècheuses électriques).
3. Téléphones, radios, téléviseurs (nombre total, télécouleurs et téléviseurs en noir et blanc) et tourne-disques.
4. Automobiles et radios d'automobile.

5. Miscellaneous household equipment (1976 - air conditioners, floor polishers, snow skis, lawnmowers, snow-blowers, adult-size bicycles, snowmobiles, overnight camping equipment, boats) and vacation homes.

IV. COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V. DEFINITIONS

Dwelling - A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

Household - A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

Single detached dwelling - This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling - Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat - This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

Rooms - In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms - Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case

5. Appareils ménagers divers (1976 - appareils de climatisation d'air, ciréuses, skis de neige, tondeuses, souffleuses à neige, bicyclettes de grandeur pour adultes, motoneiges, matériel de camping, embarcations) et maisons de villégiature.

IV. CHAMP DE L'ENQUÊTE

L'échantillon utilisé pour l'enquête est représentatif de tous les ménages au Canada, à quelques exceptions près. Sont exclus les ménages vivant au Yukon et dans les Territoires du Nord-Ouest, dans une réserve indienne, dans une institution, dans un camp militaire ou autre logement collectif comme les hôtels, les grandes pensions, les clubs, les camps de bûcherons et les baraquements de travailleurs; sont aussi exclus certains ménages privés vivant dans une remorque, une maison d'été, un bateau, etc.

V. DÉFINITIONS

Logement - Ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor ou un escalier commun à l'intérieur.

Ménage - Personne ou groupe de personnes occupant un logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés.

Logement individuel non attenant - Il s'agit ordinairement d'une maison individuelle, c.-à-d., d'une maison ne comprenant qu'un logement et non rattachée à un autre immeuble ou à une autre construction.

Logement individuel attenant - Chaque moitié d'une maison jumelée (ou double) et chaque section d'une maison en rangée ou de terrasse.

Appartement - Ce genre de logement comprend:

- (i) les logements dans les immeubles d'appartements ou les appartements-hôtels;
- (ii) les logements dans les duplex ou les triplex, c.-à-d., les immeubles où la division entre les logements est horizontale;
- (iii) les logements dans des maisons transformées;
- (iv) les pièces d'habitation situées au-dessus ou à l'arrière d'un magasin, d'un restaurant, d'un garage ou d'un autre commerce;
- (v) les logements réservés aux concierges dans les écoles, les églises, les entrepôts, etc.; et
- (vi) les logements privés pour employés dans les hôpitaux et les institutions.

Pièces - Pour calculer le nombre de pièces dans un logement, on ne compte que les pièces servant ou pouvant servir à l'habitation, y compris les pièces occupées par les serviteurs, les pensionnaires ou les membres de familles en pension. Ne sont pas comptés comme pièces: les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptés que s'ils sont complètement aménagés et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

Chambres à coucher - Sont des "chambres à coucher" toutes les pièces conçues, meublées et utilisées comme telles, même si elles ne servent que de temps à autre (les chambres d'amis,

of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI. RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and interviewers. This difference is called the sampling error of the estimates. It is not the same for all estimates; of two estimates the larger one will likely have a smaller per cent sampling error (the sampling error expressed as a per cent of the estimate it refers to) and of two estimates of the same size the one referring to a characteristic more evenly distributed across the country will tend to have a smaller per cent sampling variability. Data based on very small samples are not published and are indicated in the tables by (...).

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of interviewer and respondent variations. The principal elements of this nature are as follows:

1. The interviewer may misinterpret the concepts and definitions despite careful instruction.
2. The interviewer may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the interviewer.
4. There may be deliberate mis-statement by either interviewer or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

The sampling error, as described above, is not known. A quantity, called the standard deviation, can however be estimated from sample data itself. The standard deviation of an estimate is a statistical measure of its sampling error. It also partially measures the effect of non-sampling errors, but does not reflect any systematic biases in the data. The chances are about 68 out of 100 that the difference between a sample estimate and the corresponding census figure would be less than the standard deviation. The chances are about 95 out of 100 that the difference would be less than twice the standard deviation and about 99 out of 100 that it would be less than two and one-half times as large.

Alphabetic indicators of standard deviation are used in this publication to give an indication of the reliability of the estimates. The letter "A" indicates that the estimate is very reliable; the letter "B" indicates that the data is reliable but to a somewhat lesser degree than the "A" category; and so on. Generally, published estimates are in the categories "A" to "G" and should be considered reliable enough for most purposes. Data with a higher variability (in the "H" category) are not published and are indicated in the tables by (--). Total household estimates for Canada and the provinces are obtained from other sources and are considered to have no associated sampling error.

par exemple). Les studios et autres pièces de séjour et de repos ne le sont pas. Dans le cas des logements comptant une seule pièce (par exemple, une garçonnière), il ne faut pas déclarer de chambre à coucher.

VI. FIABILITÉ DES ESTIMATIONS

Les estimations présentées ici sont basées sur un échantillon de ménages et peuvent différer des chiffres qu'aurait donné un recensement exhaustif fait avec les mêmes questionnaires, les mêmes explications et les mêmes interviewers. Cette différence s'appelle l'erreur d'échantillonnage. L'erreur d'échantillonnage n'est pas la même pour toutes les estimations; de deux estimations, la plus forte comporte vraisemblablement la plus faible erreur d'échantillonnage (exprimée en pourcentage de l'estimation visée) et de deux estimations du même ordre, celle qui porte sur la caractéristique la plus uniformément répartie dans tout le Canada présente ordinairement le pourcentage le moins élevé de variabilité due à l'échantillonnage. Les données basées sur de très petits échantillons ne sont pas publiées et sont indiquées par (...) dans les tableaux.

Outre cette variabilité d'échantillonnage, d'autres facteurs font que les chiffres recueillis par sondage ou par recensement diffèrent des chiffres réels; il s'agit des erreurs attribuables aux interviewers et aux enquêtés:

1. L'interviewer peut mal interpréter les concepts et les définitions en dépit d'une préparation soignée.
2. L'interviewer peut accidentellement formuler ses questions de façon à influencer les réponses de l'enquêté.
3. L'enquêté peut accidentellement formuler ses réponses de façon à influencer les questions de l'interviewer.
4. L'interviewer ou l'enquêté peut délibérément donner une indication erronée.

L'erreur non due à l'échantillonnage est aussi répandue dans un dénombrement exhaustif que dans une enquête par sondage et peut même, dans certains cas, dépasser l'erreur d'échantillonnage.

L'erreur d'échantillonnage décrite ci-dessus n'est pas connue. Toutefois, il est possible d'estimer une quantité, appelée écart-type, à partir des données mêmes du sondage. L'écart-type d'une estimation est une mesure statistique de son erreur d'échantillonnage. Il mesure aussi partiellement l'effet des erreurs non dues à l'échantillonnage, mais ne reflète pas les biais systématiques. Il y a une probabilité de 68 % que la différence entre une estimation fondée sur un échantillon et le chiffre réel correspondant soit inférieure à l'écart-type. Il y a une probabilité de 95 % que la différence soit moins de deux fois l'écart-type et d'environ 99 % qu'elle soit moins de deux fois et demie l'écart-type.

Dans cette publication, on utilise des indicateurs littéraux de l'écart-type pour illustrer la fiabilité des estimations. La lettre "A" indique une estimation très fiable; la lettre "B" signifie qu'il s'agit de données fiables, mais moins que celles de la catégorie "A"; et ainsi de suite. D'une façon générale, les estimations publiées sont classées dans les catégories de "A" à "G" et l'on devrait les considérer comme suffisamment fiables pour être utilisables. Les données dont la variabilité est plus grande (catégorie "H") ne sont pas publiées et sont indiquées dans les tableaux par (--). Les estimations du nombre total de ménages pour le Canada et les provinces ont été tirées d'autres sources, elles ne comportent pas l'indication de l'erreur d'échantillonnage.

The table below shows the alphabetic categories in terms of their per cent standard deviations. For example, a letter "B" beside an estimate indicates that one standard deviation is in the range 0.6% to 1.0% of the estimate.

Le tableau ci-dessous indique les catégories littérales correspondant aux pourcentages des écarts-types. Ainsi, lorsqu'une estimation est suivie de la lettre "B", cela signifie que l'écart-type se situe entre 0.6 % et 1.0 % de l'estimation.

Alphabetic Designation of Per Cent Standard Deviation

Désignation littérale de l'écart-type exprimé en pourcentage

Alphabetic indicator — Indicateur littéral	Per cent of estimates at one standard deviation — Pourcentage de l'estimation correspondant à un écart-type
A	0.0 — 0.5
B	0.6 — 1.0
C	1.1 — 2.5
D	2.6 — 5.0
E	5.1 — 10.0
F	10.1 — 16.5
G	16.6 — 25.0
H	25.1 +

The sample data are weighted up to estimates of total households derived from the Censuses of Canada. The projections of total households used for weighting the surveys from 1962 to 1967 were based on the 1961 Census and the survey estimates from 1968 to 1971 were taken from the 1966 Census. The projections of total households used for weighting the 1972 and subsequent surveys were based on the 1971 Census counts.

To provide greater comparability, estimates derived from the 1971 survey have been revised to the 1971 Census base. Similarly, to reflect revisions in the original projections of total households, adjustments have been made in the estimates derived from surveys taken in the intercensal years 1967-1970. The revised estimates for all or individual tables and for all five years or particular years are available on request. Similar adjustments will be made to the estimates derived from the 1972 to 1976 surveys when the 1976 Census data become available.

Les données fragmentaires sont pondérées en fonction des estimations du nombre total de ménages tirées des recensements du Canada. Les projections du nombre total de ménages qui ont servi à pondérer les enquêtes de 1962 à 1967 prenaient comme point de départ le recensement de 1961, alors que les enquêtes menées de 1968 à 1971 étaient pondérées en fonction du recensement de 1966. Les projections du nombre total de ménages utilisées pour pondérer les résultats depuis 1972 étaient fondées sur le recensement de 1971.

Pour assurer une meilleure comparabilité, les estimations tirées de l'enquête de 1971 ont été révisées en fonction du recensement de 1971. De même, en vue de tenir compte des modifications apportées aux premières projections du nombre total de ménages, les estimations tirées des enquêtes effectuées au cours des années intercensitaires 1967-1970 ont été révisées. On peut se procurer sur demande les estimations révisées pour chaque tableau ou l'ensemble des tableaux et pour chacune ou l'ensemble des cinq années. Lorsque les données du recensement de 1976 paraîtront, on procédera à des redressements semblables dans le cas des estimations tirées des enquêtes de 1972 à 1976.

31 AUTOMATIC DISHWASHER

Yes No

32 TOTAL NUMBER OF TELEPHONES INCLUDING EXTENSIONS

One Two Three or more None

33 COMBINATION RADIO-RECORD PLAYER

Yes No

34 RECORD PLAYER WITHOUT RADIO

Yes No

35 TOTAL NUMBER OF RADIOS OF ALL TYPES EXCLUDING CAR RADIOS

One Two Three Four or more None

36 ARE ANY OF THESE RADIOS FM RECEIVERS?

Yes No

37 ARE ANY OF THESE SMALL PORTABLE BATTERY OPERATED TRANSISTOR RADIOS?

Yes No

38 TOTAL NUMBER OF HOUSEHOLD MEMBERS WITH BLACK AND WHITE T.V. SETS

One Two or more None

39 TOTAL NUMBER OF COLOUR T.V. SETS

One Two or more None

40 NUMBER OF AUTOMOBILES OWNED BY HOUSEHOLD MEMBERS

One Two Three or more None

41 NUMBER OF AUTOMOBILES WITH RADIOS

One Two Three or more None

42 ARE ANY OF THESE CAR RADIOS FM RECEIVERS?

Yes No

43 NUMBER OF SNOWMOBILES

One Two or more None

44 NUMBER OF HOUSEHOLD MEMBERS WITH SNOW SHIS

One Two or more None

45 NUMBER OF ADULT-SIZE BICYCLES

One Two or more None

22 TOILET FACILITIES

One flush toilet

Two flush toilets

Three or more flush toilets

Chemical toilet

No flush or chemical toilet

23 FUEL FOR PRINCIPAL COOKING EQUIPMENT

Oil or other liquid fuel

Piped gas

Bottled gas

Electricity

Coal or coke

Wood

Other (describe in comments)

None (skip to question 25)

24 DATE COOKING EQUIPMENT MANUFACTURED

In last 5 years

6 to 10 years ago

Over 10 years ago

25 REFRIGERATOR

Electric refrigerator

Other mechanical refrigerator (gas, kerosene, etc.)

No electrical or mechanical refrigerator (skip to question 27)

26 DATE REFRIGERATOR MANUFACTURED

In last 5 years

6 to 10 years ago

Over 10 years ago

27 HOME FREEZER

Yes No

28 WASHING MACHINE

Combination automatic washer-dryer (combined as a single unit)

Separate automatic washer

Electric wringer washer

Other electric washer

None (skip to question 30)

29 DATE WASHING MACH. MANUFACTURED

In last 5 years

6 to 10 years ago

Over 10 years ago

30 CLOTHES DRYER, SEPARATE FROM WASHER

Electric

Gas

None

15 PRINCIPAL HEATING EQUIPMENT

Steam or hot water furnace

Forced hot air furnace

Heating stove (include oil space heater)

Electricity

Cook stove or range

Other (describe in comments)

16 DATE HEATING EQUIP. INSTALLED

In last 5 years

6 to 10 years ago

Over 10 years ago

17 FUEL FOR HEATING EQUIPMENT

Oil or other liquid fuel

Piped gas

Bottled gas

Electricity

Coal or coke

Wood

Other (describe in comments)

18 SOURCE OF WATER SUPPLY

Community water main system

Private source on property

Other (describe in comments)

19 TYPE OF WATER SUPPLY

Hot and cold water piped inside

Cold water only piped inside (skip to question 21)

No piped running water inside this dwelling (skip to question 21)

20 FUEL FOR FIRED HOT WATER SUPPLY

Oil or other liquid fuel

Piped gas

Bottled gas

Electricity

Coal or coke

Wood

Other (describe in comments)

21 INSTALLED BATHTUB OR SHOWER

In one bathroom (exclusive use)

In two or more bathrooms (exclusive use)

Bath facilities shared with another household

No installed bathtub or shower

7 DOES THIS HOUSEHOLD LIVE ON A FARM?

Yes No

8 TYPE OF DWELLING

Single detached

Double

Row or Terrace

Duplex

Apt., flat

Institution

Hotel or large lodging house

Camp - logging, construction, etc.

Other (describe in comments)

9 DATE BUILDING ORIGINALLY CONSTRUCTED

Before 1940

1940 - 1949

1950 - 1959

1960 - 1964

1965 - 1969

1970 - 1972

1973

1974

1975

1976

10 IS THIS DWELLING OWNED OR RENTED?

Owned

Rented for cash

Other (describe in comments)

ENQUÊTE SUR L'ÉQUIPEMENT DES MÉNAGES, PRINTEMPS 1976

REPLIR UN QUESTIONNAIRE POUR CHAQUE MÉNAGE

CE MÉNAGE VITAL DANS UNE FEMME?

15 PRINCIPAL SYSTÈME DE CHAUFFAGE

À vapeur ou à eau chaude
 À air chaud forcé
 Autre système à air chaud
 Poêle à chauffage (y compris journal-
 se de plancher)
 Électrique
 Cuisinière
 Autre (précisez dans les remarques)

16 DATE D'INSTALLATION

Depuis 5 ans
 De 6 à 10 ans
 Plus de 10 ans

17 COMBUSTIBLE DE CHAUFFAGE

Huile ou autre combustible liquide
 Gaz canalisé
 Gaz en bouteille ou en bonbonne
 Électrique
 Charbon ou coke
 Bois
 Autre (précisez dans les remarques)

18 PROVENANCE DE L'EAU COURANTE

Reseau public
 Source privée dans la propriété
 Autre (précisez dans les remarques)

19 GENRE D'EAU COURANTE

Chaud et froide amenée à l'intérieur
 Froide seulement amenée à l'inté-
 rieur (passez à la question 21)
 Pas d'eau courante à l'intérieur
 du logement (passez à la question 21)

20 COMBUSTIBLE UTILISÉ POUR L'EAU CHAUDE

Huile ou autre combustible liquide
 Gaz canalisé
 Gaz en bouteille ou en bonbonne
 Électrique
 Charbon ou coke
 Bois
 Autre (précisez dans les remarques)

21 DOUCHE OU BAIGNOIRE INSTALLÉE

Dans une salle de bains
 (usage exclusif)
 Dans deux salles de bains ou plus
 (usage exclusif)
 Baignoire partagée avec un
 autre ménage
 Ni baignoire ni douche
 installée

22 TOILETTES

Une toilette avec chasso d'eau
 Deux toilettes avec chasso d'eau
 Trois toilettes ou plus avec chasso
 d'eau
 Toilette chimique
 Toilette avec chasso d'eau
 ni toilettes chimiques
 23 COMBUSTIBLE UTILISÉ POUR LA CUISISON

Huile ou autre combustible liquide
 Gaz canalisé
 Gaz en bouteille ou en bonbonne
 Électrique
 Charbon ou coke
 Bois
 Autre (précisez dans les remarques)

24 DATE DE FABRIC. INSTALLATIONS DE CUISISON

Depuis 5 ans
 De 6 à 10 ans
 Plus de 10 ans

25 RÉFÉRIGÉRATEUR

Réfrigérateur électrique
 Autre réfrigérateur mécanique
 (gaz, kérosène, etc)
 Pas de réfrigérateur électrique
 ou mécanique (passez à la
 question 27)

26 DATE DE FABRICATION DU RÉFÉRIGÉRATEUR

Depuis 5 ans
 De 6 à 10 ans
 Plus de 10 ans

27 CONGÉLATEUR DOMESTIQUE

Oui
 Non

28 MACHINE À LAVER

Machine à laver en à
 sécher (en un seul appareil)
 Machine à laver automatique
 (pas de sécheuse électrique,
 avec toudeur
 Aucune machine à laver électrique
 Autre (passez à la question 30)

29 DATE DE FABRIC. MACHINE À LAVER

Depuis 5 ans
 De 6 à 10 ans
 Plus de 10 ans

30 SÈCHEUSE, DISTINCTE DE LA
 MACHINE À LAVER

Électrique
 À gaz
 Aucune

31 LAVE VAISSELLE AUTO

Oui
 Non

32 NOMBRE TOTAL DE

I. INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1977 Labour Force Survey; about 54,000 households were included in the sample. It should be noted that in 1973, 1974 and 1975 the survey was conducted one month earlier in April.

Beginning in January 1976, substantial changes were made to the Labour Force Survey. The effects of these changes on the Household Facilities and Equipment Survey are:

- (i) field collection procedures were altered such that approximately 60% of the interviews were conducted over the telephone and the remaining 40% by personal interview. Interviewing by telephone had been introduced in 1974 on a limited basis and was gradually increased to its present level;
- (ii) metropolitan areas have been redefined to reflect boundary changes introduced in the 1971 Census. This may slightly affect the historical comparability of the C-series special tables;
- (iii) information on tenure is now available for "owned" and "rented" categories only. The present "rented" category is equivalent to the "rented for cash" and "rented - other" groups used in earlier publications.

Several changes were made in the content of the 1977 questionnaire.(1) Below is a list of the affected questions:

Added

- Tape recorders (last included in 1975)
- Vacuum cleaners (last included in 1975)
- Electric sewing machines (last included in 1975)
- Portable humidifiers (last included in 1975)
- Motorcycles (last included in 1975)
- Cable television (last included in 1975)

(1) See survey questionnaire.

Les statistiques publiées ici sont tirées de la dernière enquête par sondage annuelle sur l'équipement ménager. L'enquête a été effectuée en même temps que l'enquête sur la population active de mai 1977; environ 54,000 ménages ont été interrogés. Il convient de remarquer qu'en 1973, 1974 et 1975 l'enquête avait eu lieu un mois plus tôt, c.-à-d., en avril.

Depuis janvier 1976, on a apporté d'importantes modifications à l'enquête sur la population active. Voici les effets que ces modifications ont eu sur l'enquête sur l'équipement ménager:

- (i) les méthodes de collecte sur le terrain ont été modifiées de sorte qu'environ 60 % des interviews ont été effectuées par téléphone et les 40 % restants, sur place. On a fait des interviews téléphoniques pour la première fois en 1974 sur une base restreinte; on en a mené de plus en plus depuis;
- (ii) les régions métropolitaines ont été délimitées à nouveau en fonction des nouvelles limites établies pour le recensement de 1971. Cela pourrait influencer légèrement sur la comparabilité chronologique des tableaux spéciaux de la série C;
- (iii) les renseignements sur le mode d'occupation se rapportent désormais à deux catégories de logements seulement; les logements possédés et les logements loués. L'actuelle catégorie "loué" correspond aux catégories "loué pour de l'argent" et "loué - autre" utilisées dans les publications antérieures.

Le questionnaire de 1977(1) a été quelque peu modifié. Les questions suivantes sont touchées:

Additions

- Magnétophones (pris en compte pour la dernière fois en 1975)
- Aspirateurs électriques (pris en compte pour la dernière fois en 1975)
- Machines à coudre électriques (prise en compte pour la dernière fois en 1975)
- Humidificateurs portatifs (pris en compte pour la dernière fois en 1975)
- Motocyclettes (prise en compte pour la dernière fois en 1975)
- Télédistribution (pris en compte pour la dernière fois en 1975)

(1) Voir le questionnaire de l'enquête.

Pianos (last included in 1972)

Condominium (new item).

Dropped

Electric floor polishers

Snowblowers

Lawn mowers

Vacation homes

Overnight camping equipment

Boats

Snow skis.

Modified

FM radios (detail expanded in 1977 from "yes" or "no" to "one", "two", "three", "four or more" or "none").

II. CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8, 10, 11 and 24 for the provinces.

To facilitate the analysis of data on heating equipment, heating fuel and fuel for hot water supply, separate tables on these facilities have been published for single dwellings (single detached, double and row or terrace) and for total dwellings of all types (Tables 10-15, 17 and 18).

Included in the tables are alphabetic indicators of standard deviation to indicate the reliability of the estimates. For a more detailed discussion on sampling error see Section VI "Reliability of Estimates".

III. OTHER DATA AVAILABLE

Following is a list of unpublished data which can be obtained upon request:

A. Canada, by Province

1. Households with radios, showing number with telephones and television sets.

Pianos (pris en compte pour la dernière fois en 1972)

Condominium (nouveau poste).

Suppressions

Cireuses électriques

Souffleuses à neige

Tondeuses

Maisons de villégiature

Matériel de camping

Embarcations

Skis de neige.

Modification

Radios avec bande FM (à 1976, on ne demandait de répondre que "oui" ou "non", mais le questionnaire de 1977 prévoit les catégories de réponses "une", "deux", "trois", "quatre et plus" et "aucune").

II. CONTENU DES TABLEAUX

Les tableaux présentent des données pour l'ensemble du Canada et, exception faite des tableaux 1, 5, 6, 8, 10, 11 et 24 pour les provinces.

Afin de simplifier l'analyse des données sur les systèmes de chauffage, les combustibles de chauffage et les combustibles utilisés pour chauffer l'eau, des tableaux distincts ont été publiés pour les logements individuels (maisons individuelles non attenantes, maisons doubles et en rangée ou de terrasse) et pour l'ensemble des logements de tous genres (tableaux 10-15, 17 et 18).

On trouvera dans les tableaux des indicateurs littéraux de l'écart-type indiquant la fiabilité des estimations. Les erreurs d'échantillonnage sont examinées à la section VI "Fiabilité des estimations".

III. AUTRES DONNÉES DISPONIBLES

Les données ne sont pas publiées, mais on peut les obtenir sur demande:

A. Canada, par province

1. Ménages équipés de radios, avec indication du nombre de ménages ayant des téléphones et des téléviseurs.

2. Households with television sets, showing number with telephones and radios.
3. Average number of persons per household, rooms per household and persons per room.
4. Households showing the period of construction of the dwelling.

B. Canada, by Urban-rural Categories - Percentage of Households Having Certain Facilities and Equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, automatic dishwashers, electric washing machines, electric clothes dryers).
4. Telephones, radios, television sets (total, black and white and colour), cable television and record playing equipment.
5. Automobiles and automobile radios.
6. Miscellaneous household equipment (1977 - air conditioners, tape recorders, portable humidifiers, adult-size bicycles, snowmobiles, motorcycles, vacuum cleaners, electric sewing machines and pianos).

C. Metropolitan Areas with 50,000 or More Households - Percentage of Households Having Certain Facilities and Equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, automatic dishwashers, electric washing machines, electric clothes dryers).
3. Telephones, radios, television sets (total, colour and black and white) and record-playing equipment.
4. Automobiles and automobile radios.
5. Miscellaneous household equipment (1977 - air conditioners, cable television, electric sewing machines, vacuum cleaners, portable humidifiers, motorcycles, adult-size bicycles, snowmobiles, tape-recorders and pianos).

2. Ménages équipés de téléviseurs, avec indication du nombre de ménages ayant des téléphones et des radios.
3. Ménages avec indication du nombre moyen de personnes par ménage, nombre de pièces par ménage et nombre de personnes par pièce.
4. Ménages avec indication de la date de construction du logement.

B. Canada, par catégorie urbaine-rurale - Pourcentage de ménages disposant de certains éléments de confort

1. Principal système de chauffage et combustible de chauffage; combustible utilisé pour l'eau chaude courante.
2. Eau courante et installations sanitaires.
3. Appareils ménagers (installations de cuisson, réfrigérateurs électriques, congélateurs domestiques, lave-vaisselle automatiques, machines à laver électriques, sècheuses électriques).
4. Téléphones, radios, téléviseurs (nombre total, téléviseurs en noir et blanc et télécouleurs), télédistribution et tourne-disques.
5. Automobiles et radios d'automobile.
6. Appareils ménagers divers (1977 - appareils de climatisation d'air, magnétophones, humidificateurs portatifs, bicyclettes de grandeur pour adultes, motoneiges, motocyclettes, aspirateurs électriques, machines à coudre électriques et pianos).

C. Régions métropolitaines comprenant 50,000 ménages et plus - Pourcentage de ménages disposant de certains éléments de confort

1. Principal système de chauffage et combustible de chauffage; combustible utilisé pour l'eau chaude courante.
2. Appareils ménagers (installations de cuisson, réfrigérateurs électriques, congélateurs domestiques, lave-vaisselle automatiques, machines à laver électriques, sècheuses électriques).
3. Téléphones, radios, téléviseurs (nombre total, télécouleurs et téléviseurs en noir et blanc) et tourne-disques.
4. Automobiles et radios d'automobile.
5. Appareils ménagers divers (1977 - appareils de climatisation d'air, télédistribution, machines à coudre électriques, aspirateurs électriques, humidificateurs portatifs, motocyclettes, bicyclettes de grandeur pour adultes, motoneiges, magnétophones et pianos).

D. Metropolitan Areas with 50,000 or More
Households - Percentage of Households
by Dwelling Characteristics

1. Type of dwelling.

E. Revised Estimates

To provide greater comparability, estimates derived from the 1971 survey have been revised to the 1971 Census base. Similarly, to reflect revisions in the original projections of total households, adjustments have been made in the estimates derived from surveys taken in the intercensal years 1967-1970. The revised estimates for all or individual tables and for all five years or particular years are available on request. Similar adjustments will be made to the estimates derived from the 1972-1976 surveys when the 1976 Census data become available.

Statistics Canada also produces occasional reports(2) that relate household facilities and equipment data to the level of income received in the preceding year. (Details on income are provided by the Survey of Consumer Finances.) The reports contain distributions of households by and within household income size groups, by household type, by region and by other characteristics. The data used in these reports are also available in a microdata file form. Any inquiries about these files should be directed to the Data Dissemination Unit, Consumer Income and Expenditure Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

IV. DEFINITIONS

Dwelling - A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

Household - A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

(2) Household Facilities by Income and Other Characteristics, 1968, Catalogue 13-540; Household Facilities by Income and Other Characteristics, 1972, Catalogue 13-560; Household Facilities by Income and Other Characteristics, 1974, available on request.

D. Régions métropolitaines comprenant 50,000 ménages et plus - Pourcentage de ménages selon le genre de logement

1. Genre de logement.

E. Estimations rectifiées

Pour assurer une meilleure comparabilité, les estimations tirées de l'enquête de 1971 ont été révisées en fonction du recensement de 1971. De même, en vue de tenir compte des modifications apportées aux premières projections du nombre total de ménages, les estimations tirées des enquêtes effectuées au cours des années intercensitaires 1967-1970 ont été révisées. On peut se procurer sur demande les estimations révisées pour chaque tableau ou l'ensemble des tableaux et pour chacune ou l'ensemble des cinq années. Lorsque les données du recensement de 1976 paraîtront, on procédera à des redressements semblables dans le cas des estimations tirées des enquêtes de 1972-1976.

Statistique Canada publie également des bulletins hors série(2) qui établissent un rapport entre les données sur l'équipement ménager et le niveau du revenu touché l'année précédente. (Les données sur le revenu sont tirées de l'enquête sur les finances des consommateurs.) Les bulletins présentent la répartition des ménages selon les tranches de revenu et à l'intérieur de ces tranches, ainsi que selon le genre de ménage, la région et d'autres caractéristiques. On peut également obtenir les données utilisées aux fins de ces bulletins sous forme de fichiers de microdonnées. Pour obtenir ces fichiers, on doit s'adresser à la Sous-section de la diffusion des données, Division du revenu et des dépenses des consommateurs, Statistique Canada, Tunney's Pasture, Ottawa (Ontario), K1A 0T6.

IV. DÉFINITIONS

Logement - Ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor ou un escalier commun à l'intérieur.

Ménage - Personne ou groupe de personnes occupant un logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés.

(2) Household Facilities by Income and Other Characteristics, 1968, n° 13-540 au catalogue; Équipement ménager selon le revenu et d'autres caractéristiques, 1972, n° 13-560 au catalogue; Équipement ménager selon le revenu et d'autres caractéristiques, 1974, qu'on peut obtenir sur demande.

Single detached dwelling - This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling - Each half of a semi-detached (or double) house and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat - This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

Rooms - In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms - Included as "bedrooms" are all rooms designed and furnished as bedrooms and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments and of many other small dwellings, no "bedroom" would be reported.

V. SOURCES AND METHODS

The Sample

The 1977 Survey of Household Facilities and Equipment used the full May 1977 Labour

Logement individuel non attenant - Il s'agit ordinairement d'une maison individuelle, c.-à-d., d'une maison ne comprenant qu'un logement et non rattachée à un autre immeuble ou à une autre construction.

Logement individuel attenant - Chaque moitié d'une maison jumelée (ou double) et chaque section d'une maison en rangée ou de terrasse.

Appartement - Ce genre de logement comprend:

- (i) les logements dans les immeubles d'appartements ou les appartements-hôtels;
- (ii) les logements dans les duplex ou les triplex, c.-à-d., les immeubles où la division entre les logements est horizontale;
- (iii) les logements dans des maisons transformées;
- (iv) les pièces d'habitation situées au-dessus ou à l'arrière d'un magasin, d'un restaurant, d'un garage ou d'un autre commerce;
- (v) les logements réservés aux concierges dans les écoles, les églises, les entrepôts, etc.;
- (vi) et les logements privés pour employés dans les hôpitaux et les institutions.

Pièces - Pour calculer le nombre de pièces dans un logement, on ne compte que les pièces servant ou pouvant servir à l'habitation, y compris les pièces occupées par les domestiques, les pensionnaires ou les membres de familles en pension. Ne sont pas comptés comme pièces: les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptés que s'ils sont complètement aménagés et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

Chambres à coucher - Sont des "chambres à coucher" toutes les pièces conçues, meublées et utilisées comme telles, même si elles ne servent que de temps à autre (les chambres d'amis, par exemple). Les studios et autres pièces de séjour et de repos ne le sont pas. Dans le cas des logements comptant une seule pièce (par exemple, une garçonnière), il ne faut pas déclarer de chambre à coucher.

V. SOURCES ET MÉTHODES

L'échantillon

L'enquête de 1977 sur l'équipement ménager a utilisé l'échantillon intégral de l'enquête de mai

Force Survey sample of approximately 62,000 dwellings. This sample represents virtually all private households in Canada except for residents of the Yukon and Northwest Territories, households located on Indian reserves and inmates of institutions. (For detailed description of the sample design, see Catalogue 71-526, Canadian Labour Force Survey, Methodology, which will be released shortly.)

Coverage

The data in this publication are designed to represent all households in Canada except for those exclusions indicated in the section on "The Sample" and:

- (i) military camps,
- (ii) collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps,
- (iii) private households living in mobile homes, in trailers, in summer cottages, on boats, etc.

The following table shows the provincial distribution of the sample used in obtaining the estimates in this report.

Province	Sample size — Taille de l'échantillon
Newfoundland — Terre-Neuve	2,947
Prince Edward Island — Île-du-Prince-Édouard	1,307
Nova Scotia — Nouvelle-Écosse	3,724
New Brunswick — Nouveau-Brunswick	3,791
Québec	7,950
Ontario	10,447
Manitoba	4,571
Saskatchewan	5,303
Alberta	6,371
British Columbia — Colombie-Britannique	5,362
Canada	51,773

Assignment of Missing Household Facilities and Equipment Data

Each household which supplied data for the May 1977 Labour Force Survey was also asked to provide data for the Survey of Household Facilities and Equipment. While the great majority of households supplied complete data on facilities and equipment, some either refused or were unable to furnish information on some or all of the questions.

1977 sur la population active, qui comptait environ 62,000 ménages. Cet échantillon représente, pour ainsi dire, tous les ménages privés du Canada, à l'exception des résidents du Yukon et des Territoires du Nord-Ouest, des ménages habitant les réserves indiennes et des pensionnaires d'institutions. (Pour obtenir la description du plan de sondage, consulter le bulletin n° 71-526 au catalogue, Méthodologie de l'enquête sur la population active, qui paraîtra bientôt.)

Champ de l'enquête

Les données présentées ici ont pour objet de représenter tous les ménages du Canada, sauf ceux indiqués sous la rubrique "L'échantillon" ainsi que:

- (i) les ménages habitant les camps militaires,
- (ii) les ménages collectifs tels que ceux résidant dans les hôtels, les grandes maisons de pension, les clubs, les camps de bûcherons et les baraquements de travailleurs,
- (iii) les ménages privés demeurant dans des maisons mobiles, des roulottes, des chalets d'été, sur des bateaux, etc.

Le tableau qui suit présente la répartition provinciale de l'échantillon qui a servi à produire les estimations contenues dans cette publication.

Imputation des données manquantes sur l'équipement ménager

On a demandé à chaque ménage participant à l'enquête de mai 1977 sur la population active de répondre également à l'enquête sur l'équipement ménager. Bien que la plupart des ménages aient fourni des données complètes sur l'équipement ménager, certains ont refusé ou n'ont pas été en mesure de le faire, pour une partie ou la totalité des questions.

The data missing from these households were assigned by computer from households which provided complete facilities and equipment data and which were similar in terms of the following characteristics:

- (i) type of dwelling;
- (ii) tenure;
- (iii) household size; and
- (iv) were located in as close a geographical proximity as possible.

Weighting

The sample data are weighted up to estimates of total households derived from the Censuses of Canada. The projections of total households used for weighting the surveys from 1962-1967 were based on the 1961 Census and the survey estimates from 1968-1971 were taken from the 1966 Census. The projections of total households used for weighting the 1972 and subsequent surveys were based on the 1971 Census counts.

VI. RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and interviewers. This difference is called the sampling error of the estimates. It is not the same for all estimates; of two estimates the larger one will likely have a smaller per cent sampling error (the sampling error expressed as a per cent of the estimate to which it refers) and of two estimates of the same size the one referring to a characteristic more evenly distributed across the country will tend to have a smaller per cent sampling variability. Data based on very small samples are not published and are indicated in the tables by (...).

Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered on the questionnaires and errors may be introduced in the processing and tabulations of the data. All these errors are called non-sampling errors. Some of the non-sampling errors will usually balance out over a large number of observations but systematically occurring errors will contribute to biases. Non-sampling errors can be reduced by a careful design of questionnaires, intensive training and supervision of interviewers and a thorough control of the processing operation. In general, the more personal and more subjective inquiries are subject to larger errors.

On a donc imputé par ordinateur les données manquantes pour ces ménages à partir des données complètes sur l'équipement fournies par des ménages possédant des caractéristiques semblables du point de vue:

- (i) du genre de logement;
- (ii) du mode d'occupation;
- (iii) de la taille du ménage et
- (iv) de la proximité géographique.

Pondération

Les données fragmentaires sont pondérées en fonction des estimations du nombre total de ménages tirées des recensements du Canada. Les projections du nombre total de ménages qui ont servi à pondérer les enquêtes de 1962-1967 prenaient comme point de départ le recensement de 1961, alors que les enquêtes menées de 1968-1971 étaient pondérées en fonction du recensement de 1966. Les projections du nombre total de ménages utilisées pour pondérer les résultats depuis 1972 étaient fondées sur le recensement de 1971.

VI. FIABILITÉ DES ESTIMATIONS

Les estimations présentées ici sont basées sur un échantillon de ménages et peuvent différer des chiffres qu'aurait donné un recensement exhaustif fait avec les mêmes questionnaires, les mêmes explications et les mêmes interviewers. Cette différence s'appelle l'erreur d'échantillonnage. L'erreur d'échantillonnage n'est pas la même pour toutes les estimations: de deux estimations, la plus élevée comporte vraisemblablement la plus faible erreur d'échantillonnage (exprimée en pourcentage de l'estimation visée) et de deux estimations du même ordre, celle qui porte sur la caractéristique la plus uniformément répartie dans tout le Canada présente ordinairement le pourcentage le moins élevé de variabilité due à l'échantillonnage. Les données basées sur de très petits échantillons ne sont pas publiées et sont indiquées par (...) dans les tableaux.

D'autres erreurs, qui n'ont pas trait à l'échantillonnage, peuvent se produire à presque toutes les étapes d'une enquête. Les enquêteurs peuvent mal comprendre les instructions, les enquêtés peuvent donner des réponses erronées, les réponses peuvent être mal notées sur les questionnaires et d'autres erreurs peuvent être commises lors de l'exploitation et de la totalisation des données. Toutes ces erreurs s'appellent des erreurs non dues à l'échantillonnage. Certaines des erreurs non dues à l'échantillonnage s'annulent après un grand nombre d'observations, mais les erreurs systématiques engendrent des biais. Il est possible de réduire ce genre d'erreurs par une rédaction soignée des questionnaires, par une formation et une surveillance intensives des enquêteurs et par un contrôle serré de l'exploitation. En général, plus les questions prennent un caractère personnel et subjectif, plus les erreurs sont considérables.

The sampling error, as described above, is not known. A quantity, called the standard deviation, can however be estimated from sample data itself. The standard deviation of an estimate is a statistical measure of its sampling error. It also partially measures the effect of non-sampling errors, but does not reflect any systematic biases in the data. The chances are about 68 out of 100 that the difference between a sample estimate and the corresponding census figure would be less than the standard deviation. The chances are about 95 out of 100 that the difference would be less than twice the standard deviation and about 99 out of 100 that it would be less than two and one-half times as large.

Alphabetic indicators of standard deviation are used in this publication to give an indication of the reliability of the estimates. The letter "A" indicates that the estimate is very reliable; the letter "B" indicates that the data is reliable but to a somewhat lesser degree than the "A" category; and so on. Generally, published estimates are in the categories "A" to "G" and should be considered reliable enough for most purposes. Data with a higher variability (in the "H" category) are not published and are indicated in the tables by (--). Total household estimates for Canada and the provinces are obtained from other sources and are considered to have no associated sampling error.

The table below shows the alphabetic categories in terms of their per cent standard deviations. For example, a letter "B" beside an estimate indicates that one standard deviation is in the range 0.6%-1.0% of the estimate.

L'erreur d'échantillonnage décrite ci-dessus n'est pas connue. Toutefois, il est possible d'estimer une quantité, appelée écart-type, à partir des données mêmes du sondage. L'écart-type d'une estimation est une mesure statistique de son erreur d'échantillonnage. Il mesure aussi partiellement l'effet des erreurs d'observation, mais ne reflète pas les biais systématiques. Il y a une probabilité de 68 % que la différence entre une estimation fondée sur un échantillon et le chiffre réel correspondant soit inférieure à l'écart-type. Il y a une probabilité de 95 % que la différence soit moins de deux fois l'écart-type et d'environ 99 % qu'elle soit moins de deux fois et demie l'écart-type.

Dans cette publication, on utilise des indicateurs littéraux de l'écart-type pour illustrer la fiabilité des estimations. La lettre "A" indique une estimation très fiable; la lettre "B" signifie qu'il s'agit de données fiables, mais moins que celles de la catégorie "A"; et ainsi de suite. D'une façon générale, les estimations publiées sont classées dans les catégories de "A" à "G" et l'on devrait les considérer comme suffisamment fiables pour être utilisables. Les données dont la variabilité est plus grande (catégorie "H") ne sont pas publiées et sont indiquées dans les tableaux par (--). Les estimations du nombre total de ménages pour le Canada et les provinces ont été tirées d'autres sources; elles ne comportent pas l'indication de l'erreur d'échantillonnage.

Le tableau ci-dessous indique les catégories littérales correspondant aux pourcentages des écarts-types. Ainsi, lorsqu'une estimation est suivie de la lettre "B", cela signifie que l'écart-type se situe entre 0.6 % et 1.0 % de l'estimation.

Alphabetic Designation of Per Cent Standard Deviation

Désignation littérale de l'écart-type exprimé en pourcentage

Alphabetic indicator — Indicateur littéral	Per cent of estimates at one standard deviation — Pourcentage de l'estimation correspondant à un écart-type
A	0.0- 0.5
B	0.6- 1.0
C	1.1- 2.5
D	2.6- 5.0
E	5.1-10.0
F	10.1-16.5
G	16.6-25.0
H	25.1+

SPECIAL NOTE REGARDING COMPARABILITY OF
1978 ESTIMATES WITH PREVIOUS YEARS

The data obtained in the 1978 Survey of Household Facilities and Equipment are weighted up to estimates of total households based on projections from the 1976 Census count of households. The projections of total households used for weighting the surveys carried out from 1972 to 1977, inclusive, were based on 1971 Census counts. Data from the 1978 survey are, therefore, not fully comparable with the originally published data from 1972 to 1977. To provide greater comparability between 1978 and 1977, estimates derived from the 1977 survey have been revised to the 1976 Census base and are contained in Appendix "A" of this report.

Revised estimates for 1972-1976 are also available. See page 8 of this report for information.

NOTE SPÉCIALE CONCERNANT LA COMPARABILITÉ
DES ESTIMATIONS DE 1978 ET DE CELLES
DES ANNÉES PRÉCÉDENTES

Les données recueillies dans le cadre de d'enquête de 1978 sur l'équipement ménager sont pondérées pour traduire les caractéristiques de l'ensemble des ménages, en fonction du nombre de ménages projeté d'après le recensement de 1976. Les projections du nombre total de ménages utilisées pour pondérer les enquêtes effectuées de 1972 à 1977 inclusivement étaient fondées sur les chiffres du recensement de 1971. Les données de l'enquête de 1978 ne sont donc pas tout à fait comparables à celles qui ont été publiées entre 1972 et 1977. Afin d'accroître la comparabilité des données de 1978 et de 1977, nous avons révisé les estimations tirées de l'enquête de 1977 en fonction de la base du recensement de 1976 et nous les présentons à l'appendice "A" de cette publication.

Les estimations révisées pour 1972-1976 sont également disponibles. Voir les renseignements à la page 8 de ce bulletin.

I. INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. It also includes in an appendix, revised data for the year 1977. The survey was carried out in conjunction with the May 1978 Labour Force Survey; about 34,000 households were included in the sample to represent virtually all private households in Canada. The exceptions to the coverage of the survey are noted in Section V "Sources and Methods".

Beginning in January 1976, substantial changes were made to the Labour Force Survey. The effects of these changes on the Household Facilities and Equipment Survey are:

- (i) field collection procedures were altered to increase the use of telephone interviews. In 1978, the sample was such that 48% of the interviews were conducted over the telephone and the remaining 52% by personal interview. Interviewing by telephone had been introduced in 1974 on a limited basis and was gradually increased to the present level;
- (ii) metropolitan areas have been redefined to reflect boundary changes introduced in the 1971 Census. This may slightly affect the historical comparability of the C-series special tables;
- (iii) information on tenure is now available for "owned" and "rented" categories only. The present "rented" category is equivalent to the "rented for cash" and "rented - other" groups used in earlier publications.

For the 1978 survey, the following changes were made in the questionnaire:(1)

Added:

Snowblowers (last included in 1976).

Lawn mowers (last included in 1976).

Vacation homes (last included in 1976).

Overnight camping equipment (last included in 1976).

(1) See survey questionnaire.

Cette publication présente les statistiques tirées de la dernière enquête par sondage annuelle sur l'équipement ménager. Elle contient également, dans l'appendice, les données révisées pour l'année 1977. L'enquête a été effectuée en même temps que l'enquête de mai 1978 sur la population active; environ 34,000 ménages ont été interrogés pour représenter la presque totalité des ménages privés du Canada. La section V, intitulée "Sources et méthodes", précise les exceptions.

Depuis janvier 1976, on a apporté d'importantes modifications à l'enquête sur la population active. Voici comment ces modifications ont influencé l'enquête sur l'équipement ménager:

- (i) les méthodes de collecte sur le terrain ont été modifiées de façon à accroître le recours aux interviews téléphoniques, de sorte que 48 % des interviews ont été effectuées par téléphone et les 52 % restants, sur place. On a fait des interviews téléphoniques pour la première fois en 1974 sur une base restreinte et l'on en mène de plus en plus depuis;
- (ii) les régions métropolitaines ont été délimitées à nouveau en fonction des nouvelles limites établies pour le recensement de 1971. Cela pourrait influencer légèrement sur la comparabilité chronologique des tableaux spéciaux de la série C;
- (iii) les renseignements sur le mode d'occupation se rapportent désormais à deux catégories de logements seulement: les logements possédés et les logements loués. L'actuelle catégorie "loué" correspond aux catégories "loué pour de l'argent" et "loué - autre" utilisées dans les publications antérieures.

Aux fins de l'enquête de 1978, les modifications suivantes ont été apportées au questionnaire(1):

Additions:

Souffleuses à neige (prises en compte pour la dernière fois en 1976).

Tondeuses (prises en compte pour la dernière fois en 1976).

Maisons de villégiature (prises en compte pour la dernière fois en 1976).

Matériel de camping (pris en compte pour la dernière fois en 1976).

(1) Voir le questionnaire d'enquête.

Boats (last included in 1976).

Downhill snow skis (new item).

Cross country snow skis (new item).

Embarcations (prises en compte pour la dernière fois en 1976).

Skis de descente (nouveau poste).

Skis de randonnée (nouveau poste).

Dropped:

Tape-recorders.

Vacuum cleaners.

Electric sewing machines.

Portable humidifiers.

Motorcycles.

Suppressions:

Magnétophones.

Aspirateurs.

Machines à coudre électriques.

Humidificateurs portatifs.

Motocyclettes.

II. CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8, 10, 11 and 24 for the provinces.

To facilitate the analysis of data on heating equipment, heating fuel, and fuel for hot water supply, separate tables on these items have been published for single dwellings (single detached, double and row or terrace) and for total dwellings of all types (Tables 10-15, 17 and 18).

Included in the tables are alphabetic indicators of standard error to indicate the reliability of the estimates. For a more detailed discussion of the sampling error see Section VI "Reliability of Estimates".

III. OTHER DATA AVAILABLE

Following is a list of unpublished data which can be obtained upon request:

A. Canada, by Province

1. Households with radios, showing number with telephones and television sets.
2. Households with television sets, showing number with telephones and radios.
3. Average number of persons per household, rooms per household and persons per room.

II. CONTENU DES TABLEAUX

Les tableaux présentent des données pour l'ensemble du Canada et, exception faite des tableaux 1, 5, 6, 8, 10, 11 et 24, pour les provinces.

Afin de simplifier l'analyse des données sur les systèmes de chauffage, les combustibles de chauffage et les combustibles pour chauffer l'eau, des tableaux distincts ont été publiés pour les logements individuels (maisons individuelles non attenantes, maisons doubles et en rangée ou de terrasse) et pour l'ensemble des logements de tous genres (tableaux 10-15, 17 et 18).

On trouvera dans les tableaux des indicateurs littéraux de l'erreur type indiquant la fiabilité des estimations. Les erreurs d'échantillonnage sont examinées à la section VI, intitulée "Fiabilité des estimations".

III. AUTRES DONNÉES OFFERTES

Les données qui suivent ne sont pas publiées, mais on peut les obtenir sur demande:

A. Canada, par province

1. Ménages équipés de radios, avec indication du nombre de ménages ayant des téléphones et des téléviseurs.
2. Ménages équipés de téléviseurs, avec indication du nombre de ménages ayant des téléphones et des radios.
3. Nombre moyen de personnes par ménage, nombre de pièces par ménage et nombre de personnes par pièce.

4. Households showing the period of construction of the dwelling.

B. Canada, by Urban-rural Categories - Percentage of Households Having Certain Facilities and Equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, automatic dishwashers, electric washing machines, electric clothes dryers).
4. Telephones, radios, television sets (total, black and white and colour), cable television and record-playing equipment.
5. Automobiles and automobile radios.
6. Miscellaneous household equipment (1978 - air conditioners, snowblowers, lawn mowers, adult-size bicycles, snowmobiles, vacation homes, downhill snow skis, cross country snow skis, overnight camping equipment and boats).

C. Metropolitan Areas with 50,000 or More Households - Percentage of Households Having Certain Facilities and Equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, automatic dishwashers, electric washing machines, electric clothes dryers).
3. Telephones, radios, television sets (total, colour, and black and white) and record-playing equipment.
4. Automobiles and automobile radios.
5. Miscellaneous household equipment (1978 - air conditioners, cable television, snowblowers, lawn mowers, vacation homes, boats, adult-size bicycles, snowmobiles, downhill snow skis, cross country snow skis and overnight camping equipment).

4. Ménages, avec indication de la date de construction du logement.

B. Canada, par catégorie urbaine-rurale - Pourcentage de ménages disposant de certains éléments de confort

1. Principal système de chauffage et combustible de chauffage; combustible utilisé pour l'eau chaude courante.
2. Eau courante et installations sanitaires.
3. Appareils ménagers (installations de cuisson, réfrigérateurs électriques, congélateurs domestiques, lave-vaisselle automatiques, machines à laver électriques, sècheuses électriques).
4. Téléphones, radios, téléviseurs (nombre total, téléviseurs en noir et blanc et télécouleurs), télédistribution et tourne-disques.
5. Automobiles et radios d'automobile.
6. Appareils ménagers divers (1978 - appareils de climatisation d'air, souffleuses à neige, tondeuses, bicyclettes de grandeur pour adultes, motoneiges, maisons de villégiature, skis de descente, skis de randonnée, matériel de camping et embarcations).

C. Régions métropolitaines comptant 50,000 ménages et plus - Pourcentage de ménages disposant de certains éléments de confort

1. Principal système de chauffage et combustible de chauffage; combustible utilisé pour l'eau chaude courante.
2. Appareils ménagers (installations de cuisson, réfrigérateurs électriques, congélateurs domestiques, lave-vaisselle automatiques, machines à laver électriques, sècheuses électriques).
3. Téléphones, radios, téléviseurs (nombre total, télécouleurs et téléviseurs en noir et blanc) et tourne-disques.
4. Automobiles et radios d'automobile.
5. Appareils ménagers divers (1978 - appareils de climatisation d'air, télédistribution, souffleuses à neige, tondeuses, maisons de villégiature, embarcations, bicyclettes de grandeur pour adultes, motoneiges, skis de descente, skis de randonnée et matériel de camping).

D. Metropolitan Areas with 50,000 or More
Households - Percentage of Households
by Dwelling Characteristics

1. Type of dwelling.

E. Revised Estimates (1967-1976)

To provide greater comparability, estimates derived from the 1976 survey have been revised to the 1976 Census base. Similarly, to reflect revisions in the original projections of households, adjustments have been made in the estimates derived from the surveys taken in the intercensal years 1972-1975. Similar adjustments were made to the estimates derived from the 1967-1971 surveys using 1971 Census data. The revised estimates for all or individual tables and for all years (1967-1976) or for particular years are available on request.

F. Related Reports

Statistics Canada also produces occasional reports that relate household facilities and equipment data to the level of income received in the preceding year. (Details on income are provided by the Survey of Consumer Finances.) Household Facilities by Income and Other Characteristics has been published for the years 1968 (Catalogue 13-540), 1972 (Catalogue 13-560), 1974 (Catalogue 13-565) and 1976 (Catalogue 13-567). The reports contain distributions of households by and within household income size groups, by household type, by region and by other characteristics. The data used in these reports are also available in a microdata file form. Any inquiries about these files should be directed to the Data Dissemination Unit, Consumer Income and Expenditure Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario K1A 0T6.

IV. DEFINITIONS

Dwelling - A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. A private dwelling is one in which one person, a family or other small group of individuals may reside, such as a single house, apartment, etc.

Household - A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings. The person or persons occupying a private dwelling form a private household.

D. Régions métropolitaines comptant 50,000 ménages
et plus - Pourcentage de ménages selon le
genre de logement

1. Genre de logement.

E. Estimations révisées (1967-1976)

Pour assurer une meilleure comparabilité, les estimations de l'enquête de 1976 ont été révisées en fonction du recensement de 1976. De même, en vue de tenir compte des modifications apportées aux premières projections du nombre de ménages, les estimations des enquêtes effectuées au cours des années intercensitaires 1972-1975 ont été révisées. Dans le cas des estimations tirées des enquêtes de 1967-1971, on a procédé à des redressements semblables à partir des données du recensement de 1971. On peut se procurer sur demande les estimations révisées pour chacun ou l'ensemble des tableaux et pour chacune ou l'ensemble des années (1967-1976).

F. Publications connexes

Statistique Canada publie également des bulletins hors série qui établissent un rapport entre les données sur l'équipement ménager et le niveau du revenu touché l'année précédente. (Les données sur le revenu sont tirées de l'enquête sur les finances des consommateurs.) Le bulletin intitulé Équipement ménager selon le revenu et d'autres caractéristiques a été publié pour les années 1968 (n° 13-540 au catalogue), 1972 (n° 13-560 au catalogue), 1974 (n° 13-565 au catalogue) et 1976 (n° 13-567 au catalogue). Ces bulletins présentent la répartition des ménages selon les tranches de revenu et à l'intérieur de ces tranches, ainsi que selon le genre de ménage, la région et d'autres caractéristiques. On peut également obtenir les données utilisées aux fins de ces bulletins sous forme de fichiers de microdonnées, en s'adressant à la Sous-section de la diffusion des données, Division du revenu et des dépenses des consommateurs, Statistique Canada, Tunney's Pasture, Ottawa (Ontario), K1A 0T6.

IV. DÉFINITIONS

Logement - Ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un escalier commun à l'intérieur. Un logement privé peut être occupé par une personne, une famille ou un autre petit groupe de personnes (par exemple, une maison individuelle, un appartement, etc).

Ménage - Personne ou groupe de personnes occupant un logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés. Ménage privé - La ou les personnes qui occupent un logement privé.

Types of Dwelling

Single detached dwelling - This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

Single attached dwelling - Each half of a semi-detached (or double) house and each section of a row or terrace is defined as a "single attached" dwelling.

Apartment or flat - This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

Rooms - In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

Bedrooms - Included as "bedrooms" are all rooms furnished as bedrooms and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments and of many other small dwellings, no "bedroom" would be reported.

Genre de logement

Logement individuel non attenant - Il s'agit ordinairement d'une maison individuelle, c.-à-d., d'une maison ne comprenant qu'un logement et non rattachée à un autre immeuble ou à une autre construction.

Logement individuel attenant - Chaque moitié d'une maison jumelée (ou double) et chaque section d'une maison en rangée ou de terrasse.

Appartement - Ce genre de logement comprend:

- (i) les logements dans les immeubles d'appartements ou les appartements-hôtels;
- (ii) les logements dans les duplex ou les triplex, c.-à-d. les immeubles où la division entre les logements est horizontale;
- (iii) les logements dans des maisons transformées;
- (iv) les pièces d'habitation situées au-dessus ou à l'arrière d'un magasin, d'un restaurant, d'un garage ou d'un autre commerce;
- (v) les logements réservés aux concierges dans les écoles, les églises, les entrepôts, etc.;
- (vi) et les logements privés pour employés dans les hôpitaux et les institutions.

Pièces - Pour calculer le nombre de pièces dans un logement, on ne compte que les pièces servant ou pouvant servir à l'habitation, y compris les pièces occupées par les domestiques, les pensionnaires ou les membres de familles en pension. Ne sont pas comptés comme pièces, les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptés que s'ils sont complètement aménagés et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

Chambres à coucher - Sont des "chambres à coucher" toutes les pièces meublées et utilisées comme telles, même si elles ne servent que de temps à autre (les chambres d'amis, par exemple). Les studios et autres pièces de séjour et de repos ne le sont pas. Dans le cas des logements comptant une seule pièce (par exemple, une garçonnière), il ne faut pas déclarer de chambre à coucher.

V. SOURCES AND METHODS

The Sample

The Survey of Household Facilities and Equipment is conducted as a supplement to the monthly Labour Force Survey once a year in the spring. In 1978, the Household Facilities and Equipment Survey was carried out in the month of May, and it was restricted to two thirds of the Labour Force Survey sample.

The Labour Force Survey sample is designed to represent virtually all households in Canada, except for households in the Yukon and Northwest Territories, households on Indian Reserves and Crown Lands, and inmates of institutions. (For a detailed description of the sample design, see Catalogue 71-526, Methodology of the Canadian Labour Force Survey, 1976.)

Coverage

The data in this publication represent only households living in standard private dwellings in Canada. Therefore, in addition to the exclusions indicated above, also excluded are:

- (i) military camps;
- (ii) collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps;
- (iii) private households living in mobile homes, in trailers, in summer cottages, on boats, etc.

While the information on facilities and equipment was collected in May 1978, other data in this report were obtained from the Labour Force Survey conducted one month earlier, in April. In that month, another Labour Force Survey supplement, the Survey of Consumer Finances was carried out. As both supplements, the Household Facilities and Equipment Survey and the Survey of Consumer Finances, covered identical Labour Force Survey subsamples, it was possible to process them jointly. The common data base used demographic and other characteristics of households from the April 1978 Labour Force Survey data file.

Response Rates

The initial Household Facilities and Equipment Survey sample (two thirds of the Labour Force Survey sample) consisted of 41,142 dwellings, of which 7,620 were vacant

V. SOURCES ET MÉTHODES

L'échantillon

L'enquête sur l'équipement ménager est effectuée en même temps que l'enquête mensuelle sur la population active, une fois par an, au printemps. En 1978, elle a été menée en mai et elle ne visait que les deux tiers de l'échantillon de l'enquête sur la population active.

L'enquête sur la population active est conçue de façon à représenter la presque totalité des ménages privés du Canada, à l'exception des résidents du Yukon et des Territoires du Nord-Ouest, des ménages demeurant dans les réserves indiennes et sur les terres de la Couronne, et des pensionnaires d'institutions. (Pour obtenir la description du plan de sondage, consulter le bulletin n° 71-526 au catalogue, Méthodologie de l'enquête sur la population active du Canada, 1976.)

Champ de l'enquête

Les données indiquées ici ne représentent que les ménages du Canada qui demeurent dans des logements privés ordinaires. Ainsi, outre les exceptions signalées ci-dessus, les ménages suivants ne sont pas compris non plus:

- (i) les ménages habitant des camps militaires;
- (ii) les ménages collectifs tels que ceux résidant dans des hôtels, des grandes maisons de pension, des clubs, des camps de bûcherons et des baraquements de travailleurs;
- (iii) les ménages privés demeurant dans des maisons mobiles, des roulottes, des chalets d'été, sur des bateaux, etc.

Bien que les données sur l'équipement ménager aient été recueillies en mai 1978, d'autres données présentées ici sont tirées de l'enquête sur la population active effectuée un mois plus tôt, soit en avril. Ce mois-là on a mené une autre enquête supplémentaire, l'enquête sur les finances des consommateurs. Étant donné que les deux enquêtes supplémentaires, équipement ménager et finances des consommateurs, visaient le même sous-échantillon de l'enquête sur la population active, nous avons pu les traiter ensemble. La base commune de données comprenait les caractéristiques démographiques et d'autres caractéristiques des ménages provenant du fichier de données de l'enquête d'avril 1978 sur la population active.

Taux de réponse

Le premier échantillon de l'enquête sur l'équipement ménager (deux tiers de celui de l'enquête sur la population active) comprenait 41,142 logements, dont 7,620 étaient vacants ou devaient être

or were to be excluded from the Household Facilities and Equipment Survey coverage. Fully or partially completed questionnaires were collected from 30,464 of the 33,522 selected households. This gives a response rate of 90.9%.

The following table shows the distribution of the sample used in obtaining the estimates in this report, and the response rates by province.

exclus du champ de l'enquête sur l'équipement ménager. Des questionnaires entièrement ou partiellement remplis ont été recueillis auprès de 30,464 des 33,522 ménages choisis. Le taux de réponse se situe donc à 90.9 %.

Le tableau qui suit indique la répartition de l'échantillon qui a servi à produire les estimations présentées dans cette publication, ainsi que les taux de réponse par province.

Province	Sample size — Taille de l'échantillon	Responding households — Ménages répondants	Response rate — Taux de réponse %
Newfoundland — Terre-Neuve	1,852	1,714	92.5
Prince Edward Island — Île-du-Prince-Édouard	859	823	95.8
Nova Scotia — Nouvelle-Écosse	2,384	2,203	92.4
New Brunswick — Nouveau-Brunswick	2,426	2,218	91.4
Québec	5,200	4,830	93.1
Ontario	6,722	6,113	90.9
Manitoba	3,016	2,740	90.8
Saskatchewan	3,470	3,128	90.1
Alberta	4,055	3,666	90.4
British Columbia — Colombie-Britannique	3,538	3,019	85.3
Canada	33,522	30,464	90.9

Assignment of Missing Household Facilities and Equipment Data

While the great majority of households supplied complete data on facilities and equipment, some either refused or were unable to furnish information on some or all of the questions.

The data missing from these households were assigned by computer from households which provided complete facilities and equipment data and which were similar in terms of the following characteristics:

- (i) type of dwelling;
- (ii) tenure;
- (iii) household size; and
- (iv) were located in as close a geographical proximity as possible.

Imputation des données manquantes sur l'équipement ménager

Bien que la plupart des ménages aient fourni des données complètes sur l'équipement ménager, certains ont refusé ou n'ont pas été en mesure de le faire, pour une partie ou la totalité des questions.

On a donc imputé par ordinateur les données manquantes pour ces ménages à partir des données complètes sur l'équipement fournies par des ménages possédant des caractéristiques semblables du point de vue:

- (i) du genre de logement;
- (ii) du mode d'occupation;
- (iii) de la taille du ménage et
- (iv) de la proximité géographique.

Methods of Estimation

The estimation of characteristics from a survey is based on the premise that each sampled unit represents, in addition to itself, a certain number of unsampled units in the population. A simple survey weight is attached to each record in the sample to reflect this representation. The primary component of this weight is the inverse of the sampling ratio which is further refined on the basis of geographical considerations. The last step in the simple survey weight creation is the compensation for household non-response in the form of an inflation of the weight by the inverse of the household response rate. Finally, to improve the efficiency of survey estimates, a ratio estimation procedure was applied.

Independent estimates of total households were derived primarily from the Census of Canada. In 1978, the projections of total households used for weighting the survey were based on the 1976 Census counts. The ratio of the independent estimate to the simple survey estimate of total households was applied to the simple survey weight to obtain the final weight for each record. This procedure was carried out independently for each province.

VI. RELIABILITY OF ESTIMATES

The estimates presented in this publication are derived from a sample survey. There are two types of errors present in an estimate based on a sample survey, namely sampling errors and non-sampling errors. Sampling errors occur because inferences about the entire population are made on the basis of information obtained from only a sample of the population. Non-sampling errors occur because it is not always possible to obtain and retain throughout processing an accurate or true response (value) for each sampled unit due to such factors as non-response, response errors, processing errors, etc. The reliability of a survey estimate is thus determined by the combined effect of sampling and non-sampling errors. It is necessary to control the levels of both types of errors in order to derive precise and accurate(2) estimates from a sample survey.

(2) It should be noted that accurate and precise estimates have different meanings statistically. A precise estimate is not necessarily accurate since significant bias may result in a low standard error about the measured mean but a higher standard error about the "true" mean that was desired to be estimated. This is another reason why one must be so concerned with non-sampling errors.

Méthodes d'estimation

L'estimation des caractéristiques d'une enquête se fonde sur le principe que chaque unité échantillonnée représente, outre elle-même, un certain nombre d'unités non comprises dans l'échantillon. On attribue un coefficient simple de pondération à chaque document de l'échantillon pour obtenir cette représentation. La principale composante de ce coefficient est la fraction de sondage inverse qu'on affine pour tenir compte des facteurs géographiques. Comme dernière étape de la création d'un coefficient simple de pondération, on compense la non-réponse des ménages en gonflant le coefficient par l'inverse du taux de réponse des ménages. Enfin, afin d'améliorer les estimations, une procédure d'estimation par quotient est appliquée.

Des estimations indépendantes du nombre total de ménages ont été principalement tirées du recensement du Canada. En 1978, les projections du nombre total de ménages utilisées pour pondérer l'enquête étaient fondées sur le recensement de 1976. Le rapport entre l'estimation indépendante et l'estimation simple de l'enquête pour toute la population est appliqué au poids simple afin d'obtenir le poids final de chaque document. On a suivi cette méthode de façon indépendante pour chaque province.

VI. FIABILITÉ DES ESTIMATIONS

Les estimations présentées ici sont tirées d'une enquête-échantillon. Une estimation fondée sur ce genre d'enquête peut comporter deux types d'erreurs: l'erreur d'échantillonnage et l'erreur d'observation. Les erreurs d'échantillonnage résultent du fait que l'on tire certaines conclusions au sujet de la population à partir des renseignements obtenus auprès d'un échantillon de cette population seulement. Les erreurs d'observation se produisent parce qu'il n'est pas toujours possible d'obtenir et de conserver à toutes les étapes du traitement une réponse (valeur) exacte ou réelle pour chaque unité échantillonnée à cause de certains facteurs comme la non-réponse, les erreurs de réponse, les erreurs de traitement, etc. La fiabilité d'une estimation d'une enquête est donc fonction de l'effet conjugué des erreurs d'échantillonnage et des erreurs d'observation. Il faut exercer un certain contrôle sur ces deux types d'erreurs si l'on veut qu'une enquête-échantillon donne des estimations exactes et précises(2).

(2) Il convient de souligner que les termes estimations exactes et estimations précises ont des significations différentes en statistique. Une estimation précise n'est pas nécessairement exacte, car un biais appréciable peut entraîner une faible erreur type pour ce qui est de la moyenne mesurée, mais une erreur type plus élevée relativement à la moyenne "réelle" qu'on voulait estimer. Voilà une autre raison pour laquelle il faut se soucier des erreurs d'observation.

Sampling Error

Estimates for the Household Facilities and Equipment Survey, being based on a sample of households, are somewhat different than those that would have been obtained had the entire population been enumerated under the same survey conditions. The error so arising is termed the sampling error. Sampling errors are dependent upon the sample design, the sample size, the variability in the population and the method of estimation.

The sampling error is an unknown quantity. The standard error of an estimate is a statistical measure of the sampling error. The fact that the Household Facilities and Equipment Survey is based on a probability sample permits the estimation of standard errors directly from the sample data in spite of the complexity of the sample design. The estimated standard error also partially measures the effect of non-sampling errors but does not reflect any systematic biases in the data. The estimation of standard errors for the Household Facilities and Equipment Survey has been patterned after the corresponding Labour Force Survey model.

Estimates based on small samples are generally less reliable and are not published. They are indicated in the tables by (...).

Non-sampling Errors

Errors may occur at any stage in the collection and processing of data for either a census or a survey. The net effect of these errors is termed the non-sampling errors. If individual errors affect the data in a systematic direction the bias so introduced reduces the reliability of the estimates. The existence of errors, even if they are randomly distributed with zero mean, adversely affects the reliability of the estimates. The careful design of the survey, the existence of quality control procedures and the monitoring of survey operations help to limit the magnitude of non-sampling errors for the survey.

Data from the Household Facilities and Equipment Survey are subject to the following types of non-sampling errors: (a) coverage error, (b) response error, (c) non-response error and (d) processing error.

(a) Coverage error — This error may occur because of inadequate coverage of the population of interest and may be introduced at various stages from the creation of the survey frame to the data collection and processing stages.

Erreur d'échantillonnage

Les estimations de l'enquête sur l'équipement ménager, fondées sur un échantillon de ménages, diffèrent quelque peu des résultats qu'aurait donné un dénombrement de toute la population dans les mêmes conditions. L'erreur qui en découle est ce qu'on appelle l'erreur d'échantillonnage. Les erreurs d'échantillonnage sont fonction du plan de sondage, de la taille de l'échantillon, de l'évolution démographique et de la méthode d'estimation.

L'erreur d'échantillonnage n'est pas connue. L'erreur type d'une estimation est une mesure statistique de l'erreur d'échantillonnage. Comme l'enquête sur l'équipement ménager repose sur un échantillon aléatoire, on peut estimer directement les erreurs types à partir des données de l'échantillon, malgré la complexité du plan de sondage. L'erreur type estimée sert aussi à mesurer partiellement l'effet des erreurs d'observation, mais ne traduit pas les biais systématiques. Dans l'enquête sur l'équipement ménager, l'estimation des erreurs types suit le modèle utilisé pour l'enquête sur la population active.

Les estimations fondées sur des échantillons de petite taille sont en général moins fiables et elles ne sont pas publiées. On les remplace par des pointillés (...) dans les tableaux.

Erreurs d'observation

Des erreurs peuvent se produire en tout temps pendant la collecte et le traitement des données, qu'il s'agisse d'un recensement ou d'une enquête. L'effet net de ces erreurs s'appelle l'erreur d'observation. Lorsque des erreurs particulières faussent les données d'une manière systématique, un tel biais atténue la fiabilité des estimations. Même avec une répartition aléatoire et une moyenne nulle, les erreurs nuisent à la fiabilité des estimations. Pour tenter de réduire l'ordre de grandeur des erreurs d'observation d'une enquête, il faut établir soigneusement le plan de sondage, exercer un contrôle de la qualité et suivre de près les opérations de l'enquête.

Les données de l'enquête sur l'équipement ménager peuvent contenir les erreurs d'observation suivantes: a) erreurs de couverture, b) erreurs de réponse, c) erreurs de non-réponse et d) erreurs de traitement.

a) Erreurs de couverture — Ces erreurs peuvent provenir d'une mauvaise saisie de la population visée et peuvent survenir à n'importe quelle étape de l'enquête, depuis la création de la base de sondage jusqu'à la collecte et au traitement des données.

(b) Response error — The response error is caused when an erroneous response for a desired information datum is obtained. This error may be due to a variety of factors among which are imprecise questionnaire design, the inability or unwillingness of the respondent to accurately provide the information, the interviewer's approach, an error in recording the response, etc.

(c) Non-response error — Despite attempts to obtain complete response for sampled units, non-response is certain to occur to some extent in the survey due to such factors as the household members being on vacation during the interview period, no one being home when the interviewer visited the household, refusal to supply the requested information, etc. For these households, the missing data must be imputed either implicitly as in the case of reweighting the respondent records or explicitly as in the case of assigning data to each non-respondent on the basis of a similar respondent record. The bias introduced by a non-response compensation procedure is unknown but it is a function of the differences in characteristics between the respondent and non-respondent subsets of the sample. Since the magnitude of this non-response bias is directly proportional to the level of non-response, attempts are made to minimize the non-response rate at the data collection stage.

(d) Processing errors — Errors may occur in any of the several stages of processing of survey data as for example, data entry, editing, weighting, etc. Well designed quality control procedures and continual checking of survey data during the processing phase keep this component of the non-sampling errors at acceptably low levels.

Alphabetic indicators of standard error are used in this publication to give an indication of the reliability of the estimates. The letter "A" indicates that the estimate is very reliable; the letter "B" indicates that the data is reliable but to a somewhat lesser degree than the "A" category; and so on. Generally, published estimates are in the categories "A" to "G" and should be considered reliable enough for most purposes. Data with a higher variability (in the "H" category) are not published and are indicated in the tables by (--). Total household estimates for Canada and the provinces are obtained from other sources and are assumed to have no associated sampling error.

b) Erreurs de réponse — Les erreurs de réponse se produisent lorsque des éléments d'information comportent une réponse erronée. Elles peuvent être attribuables à divers facteurs dont l'ambiguïté du questionnaire, l'incapacité ou le refus de l'enquêté de répondre avec précision, l'approche de l'interviewer, une mauvaise inscription, etc.

c) Erreurs de non-réponse — Malgré tous les efforts déployés pour obtenir une réponse complète des unités échantillonnées, il y aura toujours certains cas de non-réponse parce que les membres du ménage étaient en vacances pendant la période d'enquête, parce qu'il n'y avait personne à la maison lorsque l'interviewer est passé, parce que l'enquêté a refusé de fournir les renseignements demandés, ou pour d'autres raisons. Aussi faut-il imputer les données manquantes d'une manière implicite, par exemple en donnant un nouveau poids aux enregistrements des répondants, ou encore d'une manière explicite, comme lorsque les données sont attribuées à chaque non-répondant en s'appuyant sur un enregistrement semblable d'un répondant. Le biais attribuable à l'imputation est inconnu, mais il est fonction des différences de caractéristiques entre le sous-ensemble des répondants et celui des non-répondants de l'échantillon. Comme l'ordre de grandeur de ce biais est directement proportionnel au niveau de la non-réponse, c'est lors de la collecte des données que l'on cherche à réduire le taux de non-réponse.

d) Erreurs de traitement — Il s'agit des erreurs qui peuvent survenir à n'importe quelle étape du traitement des résultats de l'enquête, comme l'entrée des données, le contrôle, la pondération, etc. De bonnes méthodes de contrôle de la qualité et une vérification constante des résultats de l'enquête lors du traitement maintiennent cet élément des erreurs d'observation à un niveau suffisamment bas.

Dans cette publication, on utilise des indicateurs littéraux de l'erreur type pour illustrer la fiabilité des estimations. La lettre "A" désigne une estimation très fiable; la lettre "B" signifie qu'il s'agit de données fiables, mais moins que celles de la catégorie "A"; et ainsi de suite. D'une façon générale, les estimations publiées sont classées dans les catégories de "A" à "G" et l'on devrait les considérer comme suffisamment fiables pour être utilisables. Les données dont la variabilité est plus grande (catégorie "H") ne sont pas publiées et sont indiquées dans les tableaux par (--). Les estimations du nombre total de ménages pour le Canada et les provinces ont été tirées d'autres sources; on présume qu'elles ne comportent pas l'indication de l'erreur d'échantillonnage.

The table below shows the alphabetic categories in terms of their per cent standard errors.

Le tableau ci-dessous indique les catégories littérales correspondant aux pourcentages des erreurs types.

Alphabetic Designation of Per Cent Standard Error

Désignation littérale de l'erreur type exprimée en pourcentage

Alphabetic indicator — Indicateur littéral	Per cent of estimates at one standard error — Pourcentage de l'estimation représenté par une erreur type
A	0.0- 0.5
B	0.6- 1.0
C	1.1- 2.5
D	2.6- 5.0
E	5.1-10.0
F	10.1-16.5
G	16.6-25.0
H	25.1+

The alphabetic indicator can be used to approximate the precision of the estimate. For example, from Table 7, the estimated number of households that own their dwelling in Canada (in thousands) is 4,626, with an alphabetic indicator of B. This indicates that the standard error of this estimate lies in the range 0.6% to 1.0% of the estimate. Taking a conservative approach, the estimated standard error may be as large as 1.0% of 4,626, or 46.26. Thus, in approximately 95% of all possible samples which could have been selected from the sampling frame, the range of 4,533 to 4,719, (the estimated 4,626 households \pm 2 standard errors) will contain the count that would have been obtained if the entire population had been enumerated. In other words, there is a 95% chance that the true count of owner-occupied dwellings lies in the range 4,533 to 4,719.

L'indicateur littéral peut servir à estimer le degré de précision de l'estimation. Par exemple, au tableau 7, le nombre estimatif de ménages qui sont propriétaires de leur logement au Canada (en milliers) s'élève à 4,626, l'indicateur littéral étant B. Cela indique que l'erreur type de cette estimation se situe entre 0.6 % et 1.0 % de l'estimation. Si l'on adopte une approche conservatrice, l'erreur type estimative peut se chiffrer jusqu'à 1.0 % de 4,626, ou 46.26. Ainsi, dans environ 95 % des échantillons qu'il aurait été possible de tirer dans la base de sondage, l'intervalle 4,533 à 4,719, (le nombre estimatif de ménages, 4,626 \pm 2 erreurs types) contiendra le nombre qu'on aurait obtenu en dénombrant la totalité de la population. En d'autres termes, il y a 95 % de chances que le nombre réel de logements occupés par leurs propriétaires se situe dans l'intervalle (4,533 à 4,719).

APPENDIX ARevised Estimates, May 1977

The data presented in these tables have been revised to the 1976 Census base. The originally published estimates were derived from the 1971 Census counts. All tables published in the 1977 report are included here. For details concerning the sample, sample sizes and the questionnaire for 1977, see the published report for that year.

These revised estimates also incorporate a correction for an error in the tenure code, which misclassified a small number of rented dwellings (those with subsidized rents) as owner-occupied.

List of Tables

	Page
A1- A9. Housing Characteristics	38
A10-A15. Heating Equipment and Fuel ...	42
A16-A20. Water Supply and Plumbing Facilities	45

A32-A33. Tape Recorders and Snowmobiles	53
A34-A35. Bicycles and Motorcycles	54
A36-A41. Miscellaneous Household Equip- ment	55

APPENDICE AEstimations révisées, mai 1977

Les données présentées dans ces tableaux ont été révisées en fonction du recensement de 1976. Les estimations publiées précédemment provenaient du recensement de 1971. Tous les tableaux publiés dans le bulletin de 1977 figurent ici. Si vous désirez plus de détails sur l'échantillon, la taille des échantillons et le questionnaire de 1977, consultez la publication de l'année en question.

Ces estimations révisées comportent également la correction d'une erreur dans le code du mode d'occupation: un petit nombre de logements (dont le loyer était subventionné) avaient été classés à tort dans la catégorie "occupé par le propriétaire".

12 Garage facilities

13 Number of rooms in this dwelling

Total Rooms (incl. bedrooms)

Bedrooms

Principal heating equipment

Heating stove (incl. oil space heater)

Other (Describe in NOTES)

Date heating equipment installed

Principal fuel for heating equipment

Oil or other liquid fuel

Piped gas

Boiled gas

Electricity

Coal or coke

Wood

Other (Describe in NOTES)

Community water main system

Private source on property

Other (Describe in NOTES)

18 Type of water supply

Hot and cold running water

Cold running water only (Go to 20)

No running water (Go to 20)

19 Principal fuel for piped hot water supply

Oil or other liquid fuel

Piped gas

Boiled gas

Electricity

Coal or coke

Wood

Other (Describe in NOTES)

20 Installed bathtub or shower

In one bathroom (Exclusive use)

In two or more bathrooms (Exclusive use)

Bath facilities shared with another household

No installed bathtub or shower

21 Toilet facilities for exclusive use of household

One flush toilet

Two flush toilets

Three or more flush toilets

Chemical toilet

No flush or chemical toilet

22 Fuel for principal cooking equipment

Oil or other liquid fuel

Piped gas

Boiled gas

Electricity

Coal or coke

Wood

Other (Describe in NOTES)

23 Date cooking equipment manufactured

In last 5 years

6 to 10 years ago

Over 10 years ago

24 Refrigerator

Electric refrigerator

Other mechanical refrigerator (gas, etc.)

No electrical or mechanical refrigerator (Go to 26)

25 Date refrigerator manufactured

In last 5 years

6-10 years ago

Over 10 years ago

26 Home freezer, separate from refrigerator

Yes

No

27 Automatic dishwasher

Yes

No

28 Washing machine

Electric wringer-washer

Other electric washer

None (Go to 30)

29 Date washing machine manufactured

In last 5 years

6-10 years ago

Over 10 years ago

30 Clothes dryer

Electric

Gas

None

31 Number of telephones including extensions

0

1

2

3

4

5

6

7

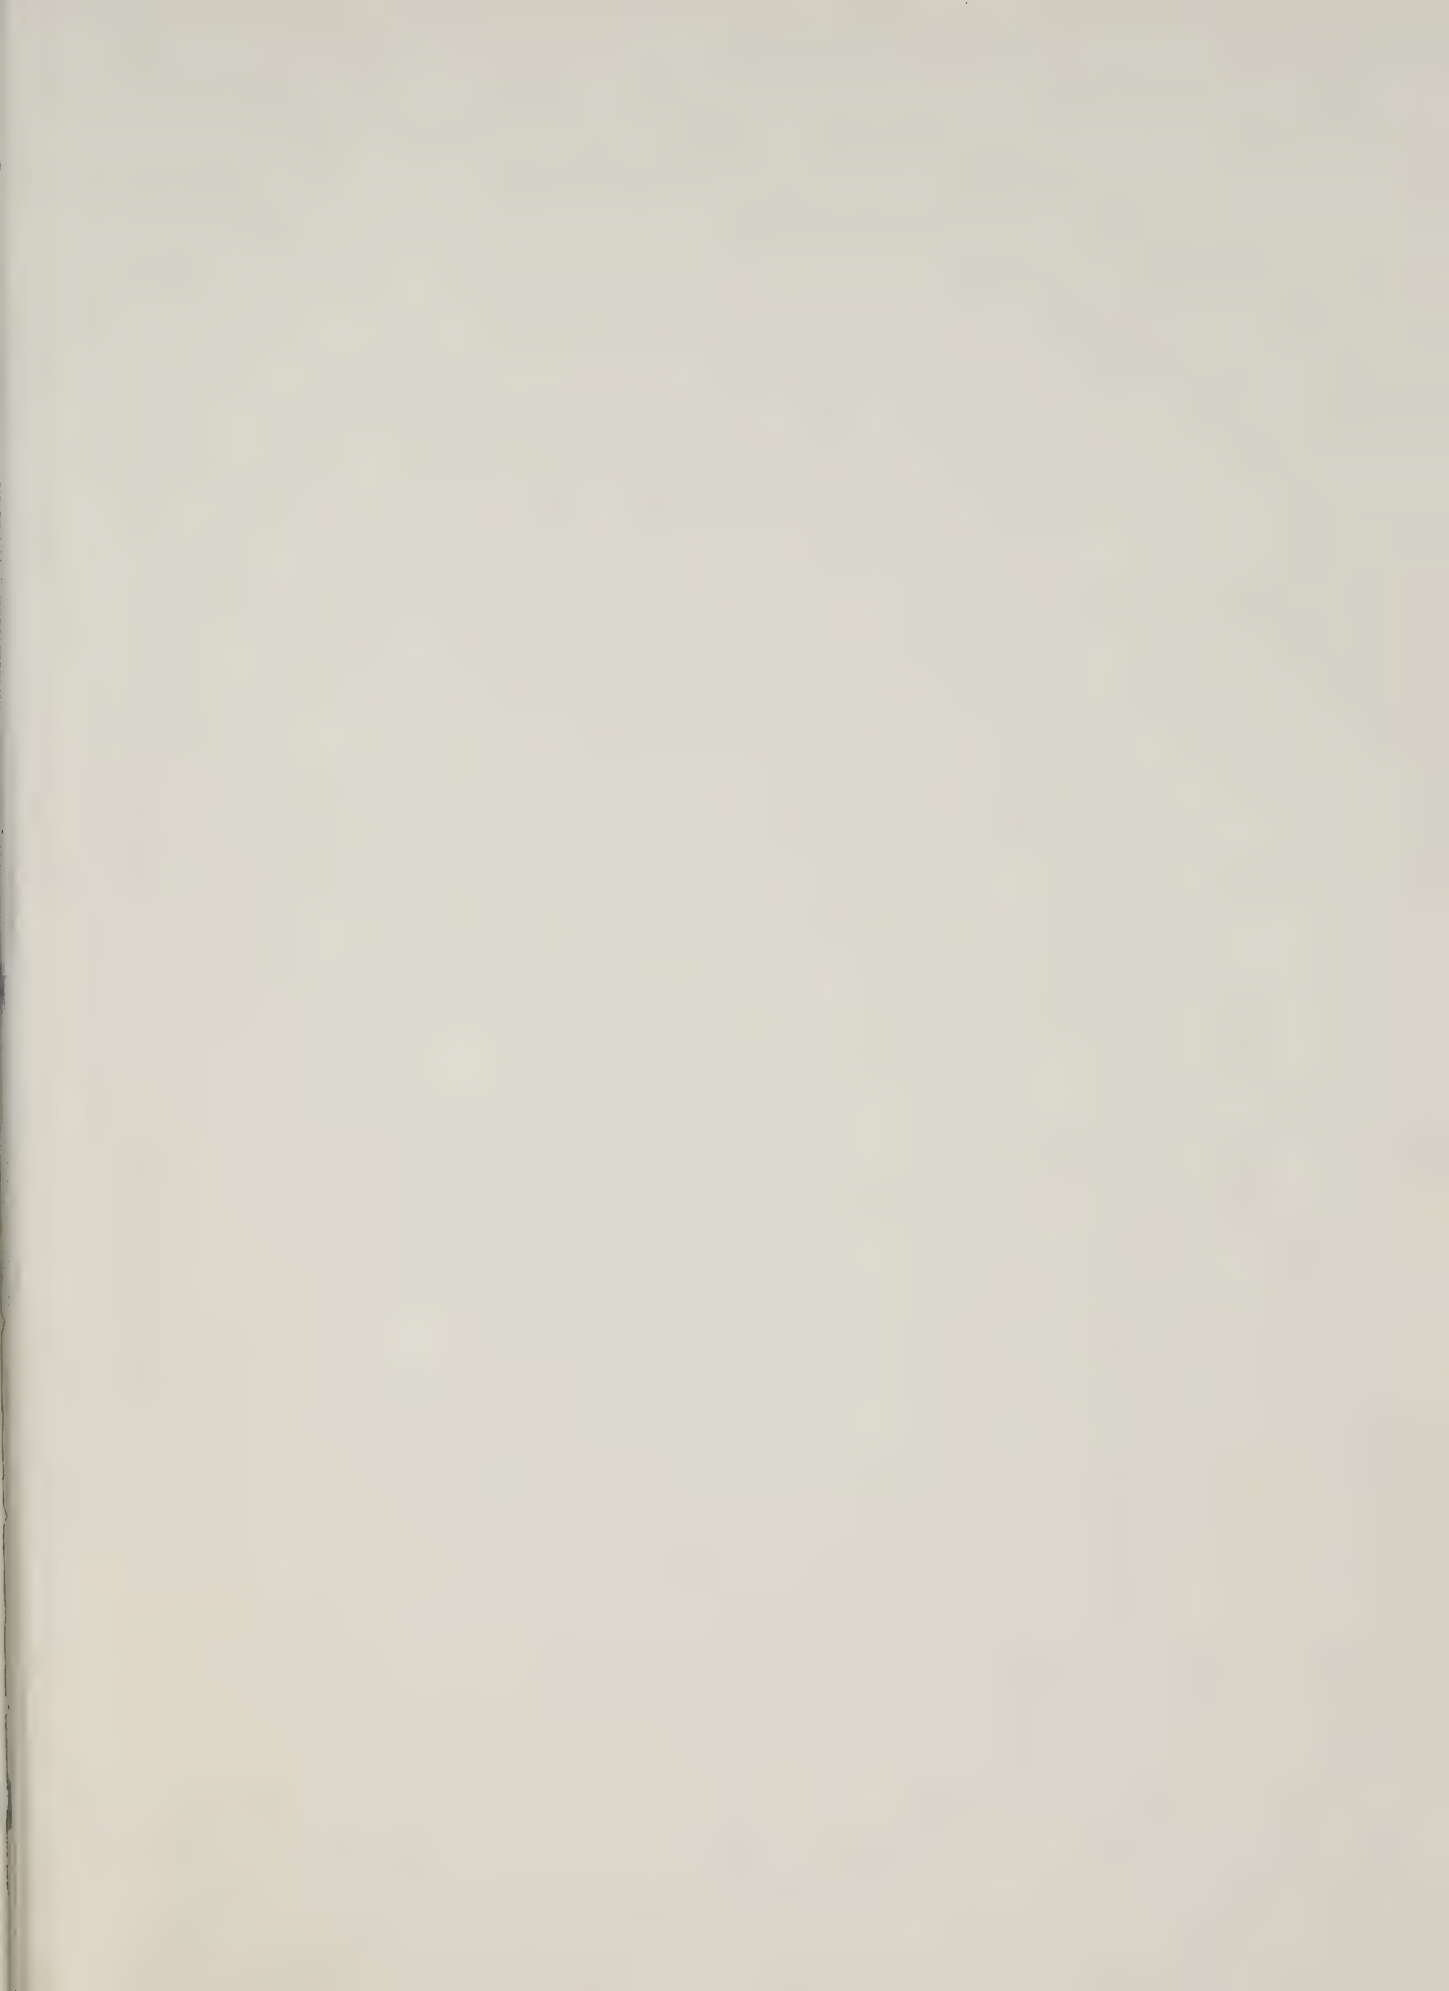

36 Combination radio-recording player

Yes

No

37 Number of radios, including radios recorded in item 36
